The **GeoHash** type exposes the following members.

Properties

| Name | Description |
|----------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|
|  Adjacent | returns the 8 adjacent hashes for this one. They are in the following order: N, NE, E, SE, S, SW, W, NW |
|  BoundingBox | Get BoundingBox for this GeoHash |
|  BoundingBoxCenterPoint | return the center of this s bounding box. this is rarely the same point that was used to build the hash. |
|  CharacterPrecision | Returns the number of characters that represent this hash. |
|  EasternNeighbour | Nearest GeoHash Neighbor to the East |

| | |
|---------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
|  LongValue | Int64 representation of this GeoHash |
|  NorthernNeighbour | Nearest GeoHash Neighbor to the North |
|  Point | returns the <code>Point</code> that was originally used to set up this. If it was built from a base32-, this is the center point of the bounding box. |
|  SignificantBits | how many significant bits are there in this ? |
|  SouthernNeighbour | Nearest GeoHash Neighbor to the South |
|  WesternNeighbour | Nearest GeoHash Neighbor to the West |

Methods

| | Name | Description |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | CompareTo | |
|  | Contains | find out if the given point lies within this hashes bounding box. <i>Note: this operation checks the bounding boxes coordinates, i.e. does not use the <code>s</code> special abilities.</i> |
|  | EnclosesCircleAroundPoint | ? |
|  | Equals | Determines whether the specified object is equal to the current object. (Overrides Object.Equals(Object) .) |
|   | FromBinaryString | Recreates a GeoHash from a string of 0's and 1's |
|   | FromGeohashString | build a new <code>GeoHash</code> from a base32-encoded <code>String</code> . This will also set up the hashes bounding box and other values, so it can also be used with functions like <code>within()</code> . |
|   | FromLongValue | Creates a GeoHash from a long value |
|   | FromOrd | |
|   | GeoHashStringWithCharacterPrecision | This method uses the given number of characters as the desired precision value. The hash can only be 64bits long, thus a maximum precision of 12 characters can be achieved. |
|  | GetHashCode | Serves as the default hash function. (Overrides Object.GetHashCode() .) |
|  | Next() | ? |
|  | Next(Int32) | ? |
|  | Ord | ? |
|  | Prev | ? |
|   | StepsBetween | Counts the number of geohashes contained between the two (ie how many times <code>next()</code> is called to increment from |

| | | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | one to two) This value depends on the number of significant bits. |
|  | ToBase32 | get the base32 string for this . this method only makes sense, if this hash has a multiple of 5 significant bits. |
|  | ToBinaryString | Get binary String representation of this GeoHash |
|  | ToString | Returns a string that represents the current object. (Overrides Object.ToString() .) |
|   | withBitPrecision | create a new with the given number of bits accuracy. This at the same time defines this hash's bounding box. |
|   | WithBitPrecision | create a new with the given number of bits accuracy. This at the same time defines this hash's bounding box. |
|   | WithCharacterPrecision | This method uses the given number of characters as the desired precision value. The hash can only be 64bits long, thus a maximum precision of 12 characters can be achieved. |
|  | Within | returns true if this is within the given geohash bounding box. |

GeoHash.Adjacent Property

returns the 8 adjacent hashes for this one. They are in the following order: N, NE, E, SE, S, SW, W, NW

Namespace: [VelocityDBExtensions.Geo](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public GeoHash[] Adjacent { get; }
```

VB

```
Public ReadOnly Property Adjacent As GeoHash()  
    Get
```

C++

```
public:  
property array<GeoHash^>^ Adjacent {  
    array<GeoHash^>^ get ();  
}
```

F#

```
member Adjacent : GeoHash[] with get
```

Property Value

Type: [GeoHash\[\]](#)

GeoHash.BoundingBox Property

Get **BoundingBox** for this [GeoHash](#)

Namespace: [VelocityDBExtensions.Geo](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public BoundingBox BoundingBox { get; }
```

VB

```
Public ReadOnly Property BoundingBox As BoundingBox  
    Get
```

C++

```
public:  
property BoundingBox^ BoundingBox {  
    BoundingBox^ get ();  
}
```

F#

```
member BoundingBox : BoundingBox with get
```

Property Value

Type: [BoundingBox](#)

See Also

[GeoHash Class](#)

[VelocityDBExtensions.Geo Namespace](#)

GeoHash.BoundingBoxCenterPoint Property

return the center of this s bounding box. this is rarely the same point that was used to build the hash.

Namespace: [VelocityDBExtensions.Geo](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public WGS84Point BoundingBoxCenterPoint { get; }
```

VB

```
Public ReadOnly Property BoundingBoxCenterPoint As WGS84Point  
    Get
```

C++

```
public:  
property WGS84Point^ BoundingBoxCenterPoint {  
    WGS84Point^ get ();  
}
```

F#

```
member BoundingBoxCenterPoint : WGS84Point with get
```

Property Value

Type: [WGS84Point](#)

See Also

GeoHash.CharacterPrecision Property

Returns the number of characters that represent this hash.

Namespace: [VelocityDBExtensions.Geo](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public int CharacterPrecision { get; }
```

VB

```
Public ReadOnly Property CharacterPrecision As Integer  
    Get
```

C++

```
public:  
property int CharacterPrecision {  
    int get ();  
}
```

F#

```
member CharacterPrecision : int with get
```

Property Value

Type: [Int32](#)

Exceptions

| Exception | Condition |
|-----------------------------------|--------------------------------------------------------------------------------------------|
| [! :IllegalStateException] | when the hash cannot be encoded in base32, i.e. when the precision is not a multiple of 5. |

GeoHash.GeoHash Methods

The [GeoHash](#) type exposes the following members.

Methods

| Name | Description |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  CompareTo | |
|  Contains | find out if the given point lies within this hashes bounding box. <i>Note: this operation checks the bounding boxes coordinates, i.e. does not use the s special abilities.s</i> |
|  EnclosesCircleAroundPoint | ? |
|  Equals | Determines whether the specified object is equal to the current object. (Overrides Object.Equals(Object) .) |
|  FromBinaryString | Recreates a GeoHash from a string of 0's and 1's |
|  FromGeohashString | build a new from a base32-encoded . This will also set up the hashes bounding box and other values, so it can also be used with functions like within(). |
|  FromLongValue | Creates a GeoHash from a long value |
|  FromOrd | |
|  GeoHashStringWithCharacterPrecision | This method uses the given number of characters as the desired precision value. The hash can only be 64bits long, thus a maximum precision of 12 characters can be achieved. |
|  GetHashCode | Serves as the default hash function. (Overrides Object.GetHashCode() .) |
|  Next() | ? |
|  Next(Int32) | ? |
|  Ord | ? |
|  Prev | ? |
|  StepsBetween | Counts the number of geohashes contained between the two (ie how many times next() is called to increment from one to two) This value depends on the number of significant bits. |
|  ToBase32 | get the base32 string for this . this method only makes sense, if this hash has a multiple of 5 significant bits. |
|  ToBinaryString | Get binary String representation of this GeoHash |
|  ToString | Returns a string that represents the current object. (Overrides Object.ToString() .) |

| | | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|   | withBitPrecision | create a new <code>with</code> with the given number of bits accuracy. This at the same time defines this hash's bounding box. |
|   | WithBitPrecision | create a new <code>With</code> with the given number of bits accuracy. This at the same time defines this hash's bounding box. |
|   | WithCharacterPrecision | This method uses the given number of characters as the desired precision value. The hash can only be 64bits long, thus a maximum precision of 12 characters can be achieved. |
|  | Within | returns true if this is within the given geohash bounding box. |

) override
```

F#

```
abstract Equals :  
    obj : Object -> bool  
override Equals :  
    obj : Object -> bool
```

Parameters

obj

Type: [System.Object](#)

The object to compare with the current object.

Return Value

Type: [Boolean](#)

`true` (`True` in Visual Basic) if the specified object is equal to the current object; otherwise, `false` (`False` in Visual Basic).

GeoHash.GeoHashStringWithCharacterPrecision Method

This method uses the given number of characters as the desired precision value. The hash can only be 64bits long, thus a maximum precision of 12 characters can be achieved.

Namespace: [VelocityDBExtensions.Geo](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public static string GeoHashStringWithCharacterPrecision(  
    double latitude,  
    double longitude,  
    int numberOfCharacters  
)
```

VB

```
Public Shared Function GeoHashStringWithCharacterPrecision (  
    latitude As Double,  
    longitude As Double,  
    numberOfCharacters As Integer  
) As String
```

C++

```
public:  
static String^ GeoHashStringWithCharacterPrecision(  
    double latitude,  
    double longitude,  
    int numberOfCharacters  
)
```

F#

```
static member GeoHashStringWithCharacterPrecision :  
    latitude : float *  
    longitude : float *  
    numberOfCharacters : int -> string
```

Parameters

latitude

Type: [System.Double](#)

[Missing <param name="latitude"/> documentation for "M:VelocityDBExtensions.Geo.GeoHash.GeoHashStringWithCharacterPrecision(System.Double,System.Double,System.Int32)"]

longitude

Type: [System.Double](#)

GeoHash.GetHashCode Method

Serves as the default hash function.

Namespace: [VelocityDBExtensions.Geo](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public override int GetHashCode()
```

VB

```
Public Overrides Function GetHashCode As Integer
```

C++

```
public:  
virtual int GetHashCode() override
```

F#

```
abstract GetHashCode : unit -> int  
override GetHashCode : unit -> int
```

Return Value

Type: [Int32](#)

A hash code for the current object.

GeoHash.StepsBetween Method

Counts the number of geohashes contained between the two (ie how many times next() is called to increment from one to two) This value depends on the number of significant bits.

Namespace: [VelocityDBExtensions.Geo](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public static long StepsBetween(  
    GeoHash one,  
    GeoHash two  
)
```

VB

```
Public Shared Function StepsBetween (  
    one As GeoHash,  
    two As GeoHash  
) As Long
```

C++

```
public:  
static long long StepsBetween(  
    GeoHash^ one,  
    GeoHash^ two  
)
```

F#

```
static member StepsBetween :  
    one : GeoHash *  
    two : GeoHash -> int64
```

Parameters

one

Type: [VelocityDBExtensions.Geo.GeoHash](#)

[Missing <param name="one"/> documentation for

"M:VelocityDBExtensions.Geo.GeoHash.StepsBetween(VelocityDBExtensions.Geo.GeoHash,VelocityDBExtensions.Geo.GeoHash)"]

two

Type: [VelocityDBExtensions.Geo.GeoHash](#)

[Missing <param name="two"/> documentation for

"M:VelocityDBExtensions.Geo.GeoHash.StepsBetween(VelocityDBExtensions.Geo.GeoHash,VelocityDBExtensions.Geo.GeoHash)"]

VelocityDB Class Library

Return Value

Type: [Int64](#)

number of steps

See Also

[GeoHash Class](#)

[VelocityDBExtensions.Geo Namespace](#)

GeoHash.ToBase32 Method

get the base32 string for this . this method only makes sense, if this hash has a multiple of 5 significant bits.

Namespace: [VelocityDBExtensions.Geo](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public string ToBase32 ()
```

VB

```
Public Function ToBase32 As String
```

C++

```
public:  
String^ ToBase32 ()
```

F#

```
member ToBase32 : unit -> string
```

Return Value

Type: [String](#)

[Missing <returns> documentation for "M:VelocityDBExtensions.Geo.GeoHash.ToBase32"]

Exceptions

| Exception | Condition |
|-------------------------------------------|-------------------------------------------------------------|
| [!:IllegalStateException] | when the number of significant bits is not a multiple of 5. |

[GeoHash Class](#)

[VelocityDBExtensions.Geo Namespace](#)

GeoHash.withBitPrecision Method

create a new `GeoHash` with the given number of bits accuracy. This at the same time defines this hash's bounding box.

Namespace: [VelocityDBExtensions.Geo](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public static GeoHash withBitPrecision(  
    WGS84Point point,  
    int numberOfBits  
)
```

VB

```
Public Shared Function withBitPrecision (  
    point As WGS84Point,  
    numberOfBits As Integer  
) As GeoHash
```

C++

```
public:  
static GeoHash^ withBitPrecision(  
    WGS84Point^ point,  
    int numberOfBits  
)
```

F#

```
static member withBitPrecision :  
    point : WGS84Point *  
    numberOfBits : int -> GeoHash
```

Parameters

point

Type: [VelocityDBExtensions.Geo.WGS84Point](#)

Location to create for

numberOfBits

Type: [System.Int32](#)

How may bits precision to use (64 is recommended)

Return Value

Type: [GeoHash](#)

[Missing <returns> documentation for

"M:VelocityDBExtensions.Geo.GeoHash.withBitPrecision(VelocityDBExtensions.Geo.WGS84Point,System.Int32)"]

[VelocityDBExtensions.Geo.GeoHash](#)

GeoHash.WithBitPrecision Method

create a new `GeoHash` with the given number of bits accuracy. This at the same time defines this hash's bounding box.

Namespace: [VelocityDBExtensions.Geo](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public static GeoHash WithBitPrecision(
    double latitude,
    double longitude,
    int numberOfBits = 64
)
```

VB

```
Public Shared Function WithBitPrecision (
    latitude As Double,
    longitude As Double,
    Optional numberOfBits As Integer = 64
) As GeoHash
```

C++

```
public:
static GeoHash^ WithBitPrecision(
    double latitude,
    double longitude,
    int numberOfBits = 64
)
```

F#

```
static member WithBitPrecision :
    latitude : float *
    longitude : float *
    ?numberOfBits : int
(* Defaults:
    let _numberOfBits = defaultArg numberOfBits 64
*)
-> GeoHash
```

Parameters

latitude

Type: [System.Double](#)

[Missing <param name="latitude"/> documentation for "M:VelocityDBExtensions.Geo.GeoHash.WithBitPrecision(System.Double,System.Double,System.Int32)"]

longitude

Type: [System.Double](#)

GeoHash.WithCharacterPrecision Method

This method uses the given number of characters as the desired precision value. The hash can only be 64bits long, thus a maximum precision of 12 characters can be achieved.

Namespace: [VelocityDBExtensions.Geo](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public static GeoHash WithCharacterPrecision(  
    double latitude,  
    double longitude,  
    int numberOfCharacters  
)
```

VB

```
Public Shared Function WithCharacterPrecision (  
    latitude As Double,  
    longitude As Double,  
    numberOfCharacters As Integer  
) As GeoHash
```

C++

```
public:  
static GeoHash^ WithCharacterPrecision(  
    double latitude,  
    double longitude,  
    int numberOfCharacters  
)
```

F#

```
static member WithCharacterPrecision :  
    latitude : float *  
    longitude : float *  
    numberOfCharacters : int -> GeoHash
```

Parameters

latitude

Type: [System.Double](#)

[Missing <param name="latitude"/> documentation for

"M:VelocityDBExtensions.Geo.GeoHash.WithCharacterPrecision(System.Double,System.Double,System.Int32)"]

longitude

Type: [System.Double](#)

GeoHash.Within Method

returns true if this is within the given geohash bounding box.

Namespace: [VelocityDBExtensions.Geo](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public bool Within(  
    GeoHash boundingBox  
)
```

VB

```
Public Function Within (  
    boundingBox As GeoHash  
) As Boolean
```

C++

```
public:  
bool Within(  
    GeoHash^ boundingBox  
)
```

F#

```
member Within :  
    boundingBox : GeoHash -> bool
```

Parameters

boundingBox

Type: [VelocityDBExtensions.Geo.GeoHash](#)

[Missing <param name="boundingBox"/> documentation for "M:VelocityDBExtensions.Geo.GeoHash.Within(VelocityDBExtensions.Geo.GeoHash)"]

Return Value

Type: [Boolean](#)

VelocityDBExtensions.Geo.query Namespace

The `VelocityDB.geohash.query` namespace contains classes for querying GeoHash, see <https://en.wikipedia.org/wiki/Geohash> Ported to C# from Java by Mats Persson, VelocityDB, Inc. original Java code, see <https://github.com/kungfoo/geohash-java> Copyright 2010, Silvio Heuberger @ IFS www.ifs.hsr.ch This code is release under the Apache License 2.0. <http://www.apache.org/licenses/LICENSE-2.0>

Classes

| | Class | Description |
|-----------------------------------------------------------------------------------|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | GeoHashBoundingBoxQuery | This class returns the hashes covering a certain bounding box. There are either 1,2 or 4 susch hashes, depending on the position of the bounding box on the geohash grid. |
|  | GeoHashCircleQuery | represents a radius search around a specific point via geohashes. Approximates the circle with a square! |

Interfaces

| | Interface | Description |
|-----------------------------------------------------------------------------------|------------------------------|-------------|
|  | GeoHashQuery | |

GeoHashBoundingBoxQuery Class

This class returns the hashes covering a certain bounding box. There are either 1,2 or 4 such hashes, depending on the position of the bounding box on the geohash grid.

Inheritance Hierarchy

[System.Object](#)

VelocityDBExtensions.Geo.query.GeoHashBoundingBoxQuery

Namespace: [VelocityDBExtensions.Geo.query](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
[SerializableAttribute]
public class GeoHashBoundingBoxQuery : GeoHashQuery
```

VB

```
<SerializableAttribute>
Public Class GeoHashBoundingBoxQuery
    Implements GeoHashQuery
```

C++

```
[SerializableAttribute]
public ref class GeoHashBoundingBoxQuery : GeoHashQuery
```

F#

```
[<SerializableAttribute>]
type GeoHashBoundingBoxQuery =
    class
        interface GeoHashQuery
    end
```

The **GeoHashBoundingBoxQuery** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------------------|------------------------------------------------------------------------|
|  | GeoHashBoundingBoxQuery | Initializes a new instance of the GeoHashBoundingBoxQuery class |

Properties

GeoHashBoundingBoxQuery.BoundingBox Property

[Missing <summary> documentation for

"P:VelocityDBExtensions.Geo.query.GeoHashBoundingBoxQuery.BoundingBox"]

Namespace: [VelocityDBExtensions.Geo.query](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public BoundingBox BoundingBox { get; }
```

VB

```
Public ReadOnly Property BoundingBox As BoundingBox  
    Get
```

C++

```
public:  
property BoundingBox^ BoundingBox {  
    BoundingBox^ get ();  
}
```

F#

```
member BoundingBox : BoundingBox with get
```

Property Value

Type: [BoundingBox](#)

See Also

[GeoHashBoundingBoxQuery Class](#)

GeoHashBoundingBoxQuery.SearchHashes Property

[Missing <summary> documentation for

"P:VelocityDBExtensions.Geo.query.GeoHashBoundingBoxQuery.SearchHashes"]

Namespace: [VelocityDBExtensions.Geo.query](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public IList<GeoHash> SearchHashes { get; }
```

VB

```
Public ReadOnly Property SearchHashes As IList(Of GeoHash)  
    Get
```

C++

```
public:  
virtual property IList<GeoHash^>^ SearchHashes {  
    IList<GeoHash^>^ get () sealed;  
}
```

F#

```
abstract SearchHashes : IList<GeoHash> with get  
override SearchHashes : IList<GeoHash> with get
```

Property Value

Type: [IList\(GeoHash\)](#)

Implements

[GeoHashQuery.SearchHashes](#)

See Also

[GeoHashBoundingBoxQuery Class](#)

[VelocityDBExtensions.Geo.query Namespace](#)

GeoHashBoundingBoxQuery.WktBox Property

[Missing <summary> documentation for

"P:VelocityDBExtensions.Geo.query.GeoHashBoundingBoxQuery.WktBox"]

Namespace: [VelocityDBExtensions.Geo.query](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public string WktBox { get; }
```

VB

```
Public ReadOnly Property WktBox As String  
    Get
```

C++

```
public:  
virtual property String^ WktBox {  
    String^ get () sealed;  
}
```

F#

```
abstract WktBox : string with get  
override WktBox : string with get
```

Property Value

Type: [String](#)

Implements

[GeoHashQuery.WktBox](#)

Namespace: [VelocityDBExtensions.Geo.query](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public bool Contains(  
    GeoHash hash  
)
```

VB

```
Public Function Contains (  
    hash As GeoHash  
) As Boolean
```

C++

```
public:  
virtual bool Contains(  
    GeoHash^ hash  
) sealed
```

F#

```
abstract Contains :  
    hash : GeoHash -> bool  
override Contains :  
    hash : GeoHash -> bool
```

Parameters

hash

Type: [VelocityDBExtensions.Geo.GeoHash](#)

[Missing <param name="hash"/> documentation for

"M:VelocityDBExtensions.Geo.query.GeoHashBoundingBoxQuery.Contains(VelocityDBExtensions.Geo.GeoHash)"]

Return Value

Type: [Boolean](#)

[Missing <returns> documentation for

"M:VelocityDBExtensions.Geo.query.GeoHashBoundingBoxQuery.Contains(VelocityDBExtensions.Geo.GeoHash)"]

GeoHashCircleQuery Class

represents a radius search around a specific point via geohashes. Approximates the circle with a square!

Inheritance Hierarchy

[System.Object](#)

VelocityDBExtensions.Geo.query.GeoHashCircleQuery

Namespace: [VelocityDBExtensions.Geo.query](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
[SerializableAttribute]
public class GeoHashCircleQuery : GeoHashQuery
```

VB

```
<SerializableAttribute>
Public Class GeoHashCircleQuery
    Implements GeoHashQuery
```

C++

```
[SerializableAttribute]
public ref class GeoHashCircleQuery : GeoHashQuery
```

F#

```
[<SerializableAttribute>]
type GeoHashCircleQuery =
    class
        interface GeoHashQuery
    end
```

The **GeoHashCircleQuery** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|--------------------------------------------------------------|
|  | GeoHashCircleQuery | create a with the given center point and a radius in meters. |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------|-------------|
|  | BoundingBox | |
|  | SearchHashes | |
|  | WktBox | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------------------|-------------------------------------------------|
|  | Contains(GeoHash) | |
|  | Contains(WGS84Point) | |
|  | ToString | (Overrides Object.ToString() .) |

BoundingBoxGeoHashIterator Class

Iterate over all of the values within a bounding box at a particular resolution

Inheritance Hierarchy

[System.Object](#)

VelocityDBExtensions.Geo.util.BoundingBoxGeoHashIterator

Namespace: [VelocityDBExtensions.Geo.util](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public class BoundingBoxGeoHashIterator : IEnumerable<GeoHash>,
    IEnumerable
```

VB

```
Public Class BoundingBoxGeoHashIterator
    Implements IEnumerable(Of GeoHash), IEnumerable
```

C++

```
public ref class BoundingBoxGeoHashIterator : IEnumerable<GeoHash^>,
    IEnumerable
```

F#

```
type BoundingBoxGeoHashIterator =
    class
        interface IEnumerable<GeoHash>
        interface IEnumerable
    end
```

The **BoundingBoxGeoHashIterator** type exposes the following members.

Constructors

| Name | Description |
|--------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
|  BoundingBoxGeoHashIterator | Initializes a new instance of the BoundingBoxGeoHashIterator class |

Properties

| Name | Description |
|-----------------------------------------------------------------------------------------------------------------|-------------|
|  BoundingBox | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------|-------------|
|  | GetEnumerator | |

[Missing <summary> documentation for "M:VelocityDBExtensions.Geo.util.TwoGeoHashBoundingBox.WithCharacterPrecision(VelocityDBExtensions.Geo.BoundingBox,System.Int32)"]

Namespace: [VelocityDBExtensions.Geo.util](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public static TwoGeoHashBoundingBox WithCharacterPrecision (
    BoundingBox bbox,
    int numberOfCharacters
)
```

VB

```
Public Shared Function WithCharacterPrecision (
    bbox As BoundingBox,
    numberOfCharacters As Integer
) As TwoGeoHashBoundingBox
```

C++

```
public:
static TwoGeoHashBoundingBox^ WithCharacterPrecision(
    BoundingBox^ bbox,
    int numberOfCharacters
)
```

F#

```
static member WithCharacterPrecision :
    bbox : BoundingBox *
    numberOfCharacters : int -> TwoGeoHashBoundingBox
```

Parameters

PriorityQueue(Priority, Value) Class

Priority Queue that stores values and priorities.

Inheritance Hierarchy

[System.Object](#)

VelocityDBExtensions.Spatial.PriorityQueue(Priority, Value)

[VelocityDBExtensions.Spatial.PriorityQueueRTree](#)

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public class PriorityQueue<Priority, Value>  
where Priority : IComparable
```

VB

```
Public Class PriorityQueue (Of Priority As IComparable, Value)
```

C++

```
generic<typename Priority, typename Value>  
where Priority : IComparable  
public ref class PriorityQueue
```

F#

```
type PriorityQueue<'Priority, 'Value when 'Priority : IComparable> = class  
end
```

Type Parameters

Priority

[Missing <typeparam name="Priority"/> documentation for "T:VelocityDBExtensions.Spatial.PriorityQueue`2"]

Value

[Missing <typeparam name="Value"/> documentation for "T:VelocityDBExtensions.Spatial.PriorityQueue`2"]

The PriorityQueue(Priority, Value) type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------------------|-----------------------|
|  | PriorityQueue(Priority, Value) | Creates a PriorityQue |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------------------|---------------------------------------------------------------------|
|  | Count | The number of values and priorities that are in the que |
|  | PriorityPeek | Peek at the next Priority |
|  | SortOrderAscending | Set or get sorting order, ascending if true or descending if false. |
|  | ValuePeek | Peek at the next value |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | Clear | Removes all values and priorities from the que |
|  | Insert | Insert a value, append it to the arrays, then reheapify by promoting it to the correct place. |
|  | Pop | Get the value with the lowest priority creates a "hole" at the root of the tree. The algorithm swaps the hole with the appropriate child, until the last entry will fit correctly into the hole (ie is lower priority than its children) |

PriorityQueue(*Priority, Value*) Constructor

Creates a PriorityQue

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public PriorityQueue(  
    bool sortOrderAscending = true,  
    int initialCapacity = 25  
)
```

VB

```
Public Sub New (  
    Optional sortOrderAscending As Boolean = true,  
    Optional initialCapacity As Integer = 25  
)
```

C++

```
public:  
PriorityQueue(  
    bool sortOrderAscending = true,  
    int initialCapacity = 25  
)
```

F#

```
new :  
    ?sortOrderAscending : bool *  
    ?initialCapacity : int  
(* Defaults:  
    let _sortOrderAscending = defaultArg sortOrderAscending true  
    let _initialCapacity = defaultArg initialCapacity 25  
)  
-> PriorityQueue
```

Parameters

sortOrderAscending (Optional)

Type: [System.Boolean](#)

order ascending if true otherwise order descending

initialCapacity (Optional)

Type: [System.Int32](#)

improve performance by setting expected size initially

F#

```
type PriorityQueueRTree =  
    class  
        inherit PriorityQueue<float, Rectangle>  
    end
```

The **PriorityQueueRTree** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|-------------------------------------------------------------------|
|  | PriorityQueueRTree | Initializes a new instance of the PriorityQueueRTree class |

PriorityQueueRTree Constructor

Initializes a new instance of the [PriorityQueueRTree](#) class

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public PriorityQueueRTree(  
    bool sortOrderAscending = true,  
    int initialCapacity = 25  
)
```

VB

```
Public Sub New (  
    Optional sortOrderAscending As Boolean = true,  
    Optional initialCapacity As Integer = 25  
)
```

C++

```
public:  
PriorityQueueRTree (  
    bool sortOrderAscending = true,  
    int initialCapacity = 25  
)
```

F#

```
new :  
    ?sortOrderAscending : bool *  
    ?initialCapacity : int  
(* Defaults:  
    let _sortOrderAscending = defaultArg sortOrderAscending true  
    let _initialCapacity = defaultArg initialCapacity 25  
)  
-> PriorityQueueRTree
```

Parameters

sortOrderAscending (Optional)

Type: [System.Boolean](#)

[Missing <param name="sortOrderAscending"/> documentation for "M:VelocityDBExtensions.Spatial.PriorityQueueRTree.#ctor(System.Boolean,System.Int32)"]

initialCapacity (Optional)

Type: [System.Int32](#)

[Missing <param name="initialCapacity"/> documentation for "M:VelocityDBExtensions.Spatial.PriorityQueueRTree.#ctor(System.Boolean,System.Int32)"]

VelocityDB Class Library

[PriorityQueueRTree Class](#)

[VelocityDBExtensions.Spatial Namespace](#)

Rectangle Structure

[Missing <summary> documentation for "T:VelocityDBExtensions.Spatial.Rectangle"]

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public struct Rectangle : IComparable
```

VB

```
Public Structure Rectangle
    Implements IComparable
```

C++

```
public value class Rectangle : IComparable
```

F#

```
[<SealedAttribute>]
type Rectangle =
    struct
        interface IComparable
    end
```

The **Rectangle** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------|----------------------------------------------------------|
|  | Rectangle | Initializes a new instance of the Rectangle class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------|-----------------------------------------------------------------------------------------|
|  | Area | Compute the area of this rectangle. |
|  | AspectRatio | The aspect ratio denotes the ratio of length to width of the rectangle (Width / Height) |
|  | Centre | Gets the centre of the rectangle |
|  | Height | The height of a rectangle |
|  | MaxX | The high x coordinate |
|  | MaxY | The high y coordinate |
|  | MinX | The low x coordinate |
|  | MinY | The low y coordinate |
|  | Width | The width of a rectangle |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | add | Computes the union of this rectangle and the passed point, storing the result in this rectangle. |
|  | Add | Computes the union of this rectangle and the passed rectangle, storing the result in this rectangle. |
|  | CompareTo | |
|  | containedBy | Determine whether this rectangle is contained by the passed rectangle |
|  | Contains | Determine whether this rectangle contains the passed rectangle |
|  | distance | Return the distance between a rectangle and a point. If the rectangle contains the point, the distance is zero. |
|  | Distance(Point) | Return the distance between this rectangle and the passed point. If the rectangle contains the point, the distance is zero. |
|  | Distance(Rectangle) | Return the distance between this rectangle and the passed rectangle. If the rectangles overlap, the distance is zero. |
|  | distanceSq | Get the square of the distance between two points. |
|  | edgeOverlaps | Determine whether an edge of this rectangle overlies the equivalent edge of the passed rectangle |
|   | enlargement | Calculate the area by which a rectangle would be enlarged if added to the passed rectangle |
|  | Enlargement | Calculate the area by which this rectangle would be enlarged if added to the passed rectangle. Neither rectangle is altered. |
|  | Equals | |
|  | GetHashCode | Customized hash code using the coordinates of the rectangle $37 * \text{minX} * \text{minY} * \text{maxX} * \text{maxY}$ (Overrides ValueType.GetHashCode() .) |
|  | Intersects | Determine whether this rectangle intersects the passed rectangle |
|  | sameObject | Determine whether this rectangle is the same as another object. Note that two rectangles can be equal but not the same object, if they both have the same bounds. |
|  | set | Sets the size of this rectangle to equal the passed rectangle. |
|  | ToString | Return a string representation of this rectangle, in the form: (1.2, 3.4), (5.6, 7.8) (Overrides ValueType.ToString() .) |
|  | union | Find the the union of this rectangle and the passed rectangle. Neither rectangle is altered |

Rectangle Constructor

Initializes a new instance of the [Rectangle](#) class

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public Rectangle(  
    double x1,  
    double y1,  
    double x2,  
    double y2  
)
```

VB

```
Public Sub New (  
    x1 As Double,  
    y1 As Double,  
    x2 As Double,  
    y2 As Double  
)
```

C++

```
public:  
Rectangle(  
    double x1,  
    double y1,  
    double x2,  
    double y2  
)
```

F#

```
new :  
    x1 : float *  
    y1 : float *  
    x2 : float *  
    y2 : float -> Rectangle
```

Parameters

x1

Type: [System.Double](#)

coordinate of any corner of the rectangle

y1

Type: [System.Double](#)

(see *x1*)

VelocityDB Class Library

x2

Type: [System.Double](#)

coordinate of the opposite corner

y2

Type: [System.Double](#)

(see x2)

Rectangle.Rectangle Methods

The [Rectangle](#) type exposes the following members.

Methods

| Name | Description |
|-----------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  add | Computes the union of this rectangle and the passed point, storing the result in this rectangle. |
|  Add | Computes the union of this rectangle and the passed rectangle, storing the result in this rectangle. |
|  CompareTo | |
|  containedBy | Determine whether this rectangle is contained by the passed rectangle |
|  Contains | Determine whether this rectangle contains the passed rectangle |
|  distance | Return the distance between a rectangle and a point. If the rectangle contains the point, the distance is zero. |
|  Distance(Point) | Return the distance between this rectangle and the passed point. If the rectangle contains the point, the distance is zero. |
|  Distance(Rectangle) | Return the distance between this rectangle and the passed rectangle. If the rectangles overlap, the distance is zero. |
|  distanceSq | Get the square of the distance between two points. |
|  edgeOverlaps | Determine whether an edge of this rectangle overlies the equivalent edge of the passed rectangle |
|  enlargement | Calculate the area by which a rectangle would be enlarged if added to the passed rectangle |
|  Enlargement | Calculate the area by which this rectangle would be enlarged if added to the passed rectangle. Neither rectangle is altered. |
|  Equals | |
|  GetHashCode | Customized hash code using the coordinates of the rectangle $37 * \text{minX} * \text{minY} * \text{maxX} * \text{maxY}$ (Overrides ValueType.GetHashCode() .) |
|  Intersects | Determine whether this rectangle intersects the passed rectangle |
|  sameObject | Determine whether this rectangle is the same as another object. Note that two rectangles can be equal but not the same object, if they both have the same bounds. |
|  set | Sets the size of this rectangle to equal the passed rectangle. |
|  ToString | Return a string representation of this rectangle, in the form: (1.2, 3.4), (5.6, 7.8) (Overrides ValueType.ToString() .) |
|  union | Find the the union of this rectangle and the passed rectangle. Neither rectangle is altered |

Rectangle.add Method

Computes the union of this rectangle and the passed point, storing the result in this rectangle.

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public void add(  
    Point p  
)
```

VB

```
Public Sub add (  
    p As Point  
)
```

C++

```
public:  
void add(  
    Point p  
)
```

F#

```
member add :  
    p : Point -> unit
```

Parameters

p

Type: [VelocityDBExtensions.Spatial.Point](#)

Point to add to this rectangle

See Also

Rectangle.containedBy Method

Determine whether this rectangle is contained by the passed rectangle

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public bool containedBy(  
    Rectangle r  
)
```

VB

```
Public Function containedBy (  
    r As Rectangle  
) As Boolean
```

C++

```
public:  
bool containedBy(  
    Rectangle r  
)
```

F#

```
member containedBy :  
    r : Rectangle -> bool
```

Parameters

r

Type: [VelocityDBExtensions.Spatial.Rectangle](#)

The rectangle that might contain this rectangle

Return Value

Type: [Boolean](#)

return true if the passed rectangle contains this rectangle, false if it does not

See Also

[Rectangle Structure](#)

[VelocityDBExtensions.Spatial Namespace](#)

Rectangle.Contains Method

Determine whether this rectangle contains the passed rectangle

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public bool Contains(  
    Rectangle r  
)
```

VB

```
Public Function Contains (  
    r As Rectangle  
) As Boolean
```

C++

```
public:  
bool Contains(  
    Rectangle r  
)
```

F#

```
member Contains :  
    r : Rectangle -> bool
```

Parameters

r

Type: [VelocityDBExtensions.Spatial.Rectangle](#)

The rectangle that might be contained by this rectangle

Return Value

Type: [Boolean](#)

return true if this rectangle contains the passed rectangle, false if it does not

See Also

[VelocityDBExtensions.Spatial Namespace](#)

Rectangle.distance Method

Return the distance between a rectangle and a point. If the rectangle contains the point, the distance is zero.

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public double distance(  
    double pX,  
    double pY  
)
```

VB

```
Public Function distance (  
    pX As Double,  
    pY As Double  
) As Double
```

C++

```
public:  
double distance(  
    double pX,  
    double pY  
)
```

F#

```
member distance :  
    pX : float *  
    pY : float -> float
```

Parameters

pX

Type: [System.Double](#)

X coordinate of point

pY

Type: [System.Double](#)

Y coordinate of point

Return Value

Type: [Double](#)

return distance between this rectangle and the passed point.

Rectangle.enlargement Method

Calculate the area by which a rectangle would be enlarged if added to the passed rectangle

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

```
C#  
public static double enlargement(  
    Rectangle r1,  
    Rectangle r2  
)
```

```
VB  
Public Shared Function enlargement (  
    r1 As Rectangle,  
    r2 As Rectangle  
) As Double
```

```
C++  
public:  
static double enlargement(  
    Rectangle r1,  
    Rectangle r2  
)
```

```
F#  
static member enlargement :  
    r1 : Rectangle *  
    r2 : Rectangle -> float
```

Parameters

r1

Type: [VelocityDBExtensions.Spatial.Rectangle](#)

minimum X coordinate of rectangle 1

r2

Type: [VelocityDBExtensions.Spatial.Rectangle](#)

minimum X coordinate of rectangle 2

Return Value

Type: [Double](#)

return enlargement

See Also

Rectangle.Enlargement Method

Calculate the area by which this rectangle would be enlarged if added to the passed rectangle. Neither rectangle is altered.

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public double Enlargement(  
    ref Rectangle r  
)
```

VB

```
Public Function Enlargement (  
    ByRef r As Rectangle  
) As Double
```

C++

```
public:  
double Enlargement(  
    Rectangle% r  
)
```

F#

```
member Enlargement :  
    r : Rectangle byref -> float
```

Parameters

r

Type: [VelocityDBExtensions.Spatial.Rectangle](#)

Rectangle to union with this rectangle, in order to compute the difference in area of the union and the original rectangle

Return Value

Type: [Double](#)

enlargement

Rectangle.Equals Method

[Missing <summary> documentation for

"M:VelocityDBExtensions.Spatial.Rectangle.Equals(VelocityDBExtensions.Spatial.Rectangle)"]

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public bool Equals(  
    Rectangle r  
)
```

VB

```
Public Function Equals (  
    r As Rectangle  
) As Boolean
```

C++

```
public:  
bool Equals(  
    Rectangle r  
)
```

F#

```
member Equals :  
    r : Rectangle -> bool
```

Parameters

r

Type: [VelocityDBExtensions.Spatial.Rectangle](#)

[Missing <param name="r"/> documentation for

"M:VelocityDBExtensions.Spatial.Rectangle.Equals(VelocityDBExtensions.Spatial.Rectangle)"]

Return Value

Type: [Boolean](#)

[Missing <returns> documentation for

"M:VelocityDBExtensions.Spatial.Rectangle.Equals(VelocityDBExtensions.Spatial.Rectangle)"]

[VelocityDBExtensions.Spatial Namespace](#)

Rectangle.Intersects Method

Determine whether this rectangle intersects the passed rectangle

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public bool Intersects(  
    ref Rectangle? r  
)
```

VB

```
Public Function Intersects (  
    ByRef r As Rectangle?  
) As Boolean
```

C++

```
public:  
bool Intersects(  
    Nullable<Rectangle>% r  
)
```

F#

```
member Intersects :  
    r : Nullable<Rectangle> byref -> bool
```

Parameters

r

Type: [System.Nullable\(Rectangle\)](#)

The rectangle that might intersect this rectangle

Return Value

Type: [Boolean](#)

return true if the rectangles intersect, false if they do not intersect

See Also

[Rectangle Structure](#)

[VelocityDBExtensions.Spatial Namespace](#)

Rectangle.sameObject Method

Determine whether this rectangle is the same as another object. Note that two rectangles can be equal but not the same object, if they both have the same bounds.

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public bool sameObject(  
    Object o  
)
```

VB

```
Public Function sameObject (  
    o As Object  
) As Boolean
```

C++

```
public:  
bool sameObject(  
    Object^ o  
)
```

F#

```
member sameObject :  
    o : Object -> bool
```

Parameters

o

Type: [System.Object](#)

The object to compare with this rectangle

Return Value

Type: [Boolean](#)

[Missing <returns> documentation for "M:VelocityDBExtensions.Spatial.Rectangle.sameObject(System.Object)"]

See Also

[Rectangle Structure](#)

[VelocityDBExtensions.Spatial Namespace](#)

Rectangle.set Method

Sets the size of this rectangle to equal the passed rectangle.

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public void set (  
    Rectangle r  
)
```

VB

```
Public Sub set (  
    r As Rectangle  
)
```

C++

```
public:  
void set (  
    Rectangle r  
)
```

F#

```
member set :  
    r : Rectangle -> unit
```

Parameters

r

Type: [VelocityDBExtensions.Spatial.Rectangle](#)

[Missing <param name="r"/> documentation for "M:VelocityDBExtensions.Spatial.Rectangle.set(VelocityDBExtensions.Spatial.Rectangle)"]

[Rectangle Structure](#)

[VelocityDBExtensions.Spatial Namespace](#)

Rectangle.ToString Method

Return a string representation of this rectangle, in the form: (1.2, 3.4), (5.6, 7.8)

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public override string ToString()
```

VB

```
Public Overrides Function ToString As String
```

C++

```
public:  
virtual String^ ToString() override
```

F#

```
abstract ToString : unit -> string  
override ToString : unit -> string
```

Return Value

Type: [String](#)

return String String representation of this rectangle

See Also

[Rectangle Structure](#)

[VelocityDBExtensions.Spatial Namespace](#)

Rectangle.union Method

Find the the union of this rectangle and the passed rectangle. Neither rectangle is altered

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public Rectangle union(  
    Rectangle r  
)
```

VB

```
Public Function union (  
    r As Rectangle  
) As Rectangle
```

C++

```
public:  
Rectangle union(  
    Rectangle r  
)
```

F#

```
member union :  
    r : Rectangle -> Rectangle
```

Parameters

r

Type: [VelocityDBExtensions.Spatial.Rectangle](#)

The rectangle to union with this rectangle

Return Value

Type: [Rectangle](#)

[Missing <returns> documentation for "M:VelocityDBExtensions.Spatial.Rectangle.union(VelocityDBExtensions.Spatial.Rectangle)"]

RTree Class

RTree implementation inspired by description on Wikipedia <http://en.wikipedia.org/wiki/R-tree>

Inheritance Hierarchy

[System.Object](#)

[VelocityDb.OptimizedPersistable](#)

VelocityDBExtensions.Spatial.RTree

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public class RTree : OptimizedPersistable
```

VB

```
Public Class RTree
    Inherits OptimizedPersistable
```

C++

```
public ref class RTree : public OptimizedPersistable
```

F#

```
type RTree =
    class
        inherit OptimizedPersistable
    end
```

The **RTree** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | RTree | RTree implementaion customized for optimal performance with VelocityDB. Follows outline as described in http://en.wikipedia.org/wiki/R-tree |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------|-------------------------------------------------------------------------------------------|
|  | Bounds | Gets the bounds of all the entries in the spatial index, or null if there are no entries. |
|  | Count | Get the number of rectangles that are managed by the Rtree |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | Add | Start at the Root Node Select the child that needs the least enlargement in order to fit the new geometry. Repeat until at a leaf node. If leaf node has available space insert Else split the entry into two nodes Update parent nodes Update the entry that pointed to the node with a new minimum bounding rectangle Add a new entry for the second new node If there is no space in the parent node, split and repeat |
|  | checkConsistency | Check the consistency of the tree. |
|  | Contains | Finds all rectangles contained by the passed rectangle |
|  | InitializeAfterRead | (Overrides OptimizedPersistable.InitializeAfterRead(SessionBase).) |
|  | Intersects | Finds all rectangles that intersect the passed rectangle. |
|  | Nearest | Finds the nearest rectangles to the passed point. If multiple rectangles are equally near, they will all be returned. |
|  | NearestN | Finds the N nearest rectangles to the passed point. If multiple rectangles are equally near, they will all (but total limited to N) be returned. |
|  | Remove | Removes a rectangle from the Rtree |

Fields

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------|------------------------------------------------------------|
|  | defaultMaxNodeEntries | default maximum number of reactangles in a leaf RTree node |
|  | defaultMinNodeEntries | default minimum number of reactangles in a leaf RTree node |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------|
|  | ToStringDetails(SessionBase, Boolean) | Overloaded. Object details as a string (Defined by Utilities.) |
|  | ToStringDetails(Schema, TypeVersion, Boolean) | Overloaded. Currently only used by Database Manager (Defined by Utilities.) |

RTree Constructor

RTree implementaion customized for optimal performance with VelocityDB. Follows outline as described in <http://en.wikipedia.org/wiki/R-tree>

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public RTree(  
    int minNodeEntries = 80,  
    int maxNodeEntries = 200  
)
```

VB

```
Public Sub New (  
    Optional minNodeEntries As Integer = 80,  
    Optional maxNodeEntries As Integer = 200  
)
```

C++

```
public:  
RTree(  
    int minNodeEntries = 80,  
    int maxNodeEntries = 200  
)
```

F#

```
new :  
    ?minNodeEntries : int *  
    ?maxNodeEntries : int  
(* Defaults:  
    let _minNodeEntries = defaultArg minNodeEntries 80  
    let _maxNodeEntries = defaultArg maxNodeEntries 200  
*)  
-> RTree
```

Parameters

minNodeEntries (Optional)

Type: [System.Int32](#)

Minimum number of entries in a node. The default value is 80.

maxNodeEntries (Optional)

Type: [System.Int32](#)

Maximum number of entries in a node. The default value is 200.

RTree.Add Method

Start at the Root Node Select the child that needs the least enlargement in order to fit the new geometry. Repeat until at a leaf node. If leaf node has available space insert Else split the entry into two nodes Update parent nodes Update the entry that pointed to the node with a new minimum bounding rectangle Add a new entry for the second new node If there is no space in the parent node, split and repeat

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public void Add(  
    Rectangle r  
)
```

VB

```
Public Sub Add (  
    r As Rectangle  
)
```

C++

```
public:  
void Add(  
    Rectangle r  
)
```

F#

```
member Add :  
    r : Rectangle -> unit
```

Parameters

r

Type: [VelocityDBExtensions.Spatial.Rectangle](#)
the rectangle being added

See Also

[RTree Class](#)

[VelocityDBExtensions.Spatial Namespace](#)

RTree.checkConsistency Method

Check the consistency of the tree.

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public bool checkConsistency()
```

VB

```
Public Function checkConsistency As Boolean
```

C++

```
public:  
bool checkConsistency()
```

F#

```
member checkConsistency : unit -> bool
```

Return Value

Type: [Boolean](#)

false if an inconsistency is detected, true otherwise

See Also

[RTree Class](#)

[VelocityDBExtensions.Spatial Namespace](#)

RTree.Contains Method

Finds all rectangles contained by the passed rectangle

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public void Contains(  
    Rectangle r,  
    Func<Rectangle, bool> v  
)
```

VB

```
Public Sub Contains (  
    r As Rectangle,  
    v As Func(Of Rectangle, Boolean)  
)
```

C++

```
public:  
void Contains(  
    Rectangle r,  
    Func<Rectangle, bool>^ v  
)
```

F#

```
member Contains :  
    r : Rectangle *  
    v : Func<Rectangle, bool> -> unit
```

Parameters

r

Type: [VelocityDBExtensions.Spatial.Rectangle](#)

The rectangle for which this method finds contained rectangles.

v

Type: [System.Func\(Rectangle, Boolean\)](#)

if return true, continue seach

RTree.InitializeAfterRead Method

[Missing <summary> documentation for "M:VelocityDBExtensions.Spatial.RTree.InitializeAfterRead(VelocityDb.Session.SessionBase)"]

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public override void InitializeAfterRead(  
    SessionBase session  
)
```

VB

```
Public Overrides Sub InitializeAfterRead (  
    session As SessionBase  
)
```

C++

```
public:  
virtual void InitializeAfterRead(  
    SessionBase^ session  
) override
```

F#

```
abstract InitializeAfterRead :  
    session : SessionBase -> unit  
override InitializeAfterRead :  
    session : SessionBase -> unit
```

Parameters

session

Type: [VelocityDb.Session.SessionBase](#)

[Missing <param name="session"/> documentation for "M:VelocityDBExtensions.Spatial.RTree.InitializeAfterRead(VelocityDb.Session.SessionBase)"]

Implements

[IOptimizedPersistable.InitializeAfterRead\(SessionBase\)](#)

See Also

[RTree Class](#)

[VelocityDBExtensions.Spatial Namespace](#)

RTree.Intersects Method

Finds all rectangles that intersect the passed rectangle.

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public bool Intersects(  
    Rectangle r,  
    Func<Rectangle, bool> v  
)
```

VB

```
Public Function Intersects (  
    r As Rectangle,  
    v As Func(Of Rectangle, Boolean)  
) As Boolean
```

C++

```
public:  
bool Intersects(  
    Rectangle r,  
    Func<Rectangle, bool>^ v  
)
```

F#

```
member Intersects :  
    r : Rectangle *  
    v : Func<Rectangle, bool> -> bool
```

Parameters

r

Type: [VelocityDBExtensions.Spatial.Rectangle](#)

the rectangle we are intersecting with

v

Type: [System.Func\(Rectangle, Boolean\)](#)

if returns true, search continues else search is ended

Return Value

Type: [Boolean](#)

true if at least one intersection was found and v returns true

See Also

[RTree Class](#)

RTree.Nearest Method

Finds the nearest rectangles to the passed point. If multiple rectangles are equally near, they will all be returned.

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public PriorityQueueRTree Nearest(  
    Point p,  
    double furthestDistance  
)
```

VB

```
Public Function Nearest (  
    p As Point,  
    furthestDistance As Double  
) As PriorityQueueRTree
```

C++

```
public:  
PriorityQueueRTree^ Nearest(  
    Point p,  
    double furthestDistance  
)
```

F#

```
member Nearest :  
    p : Point *  
    furthestDistance : float -> PriorityQueueRTree
```

Parameters

p

Type: [VelocityDBExtensions.Spatial.Point](#)

the point we are looking for

furthestDistance

Type: [System.Double](#)

The furthest distance away from the rectangle to search. Rectangles further than this will not be found.

Return Value

Type: [PriorityQueueRTree](#)

a PriorityQueue containing the found rectangles and their priorities (distances from point)

VelocityDB Class Library

See Also

[RTree Class](#)

[VelocityDBExtensions.Spatial Namespace](#)

RTree.NearestN Method

Finds the N nearest rectangles to the passed point. If multiple rectangles are equally near, they will all (but total limited to N) be returned.

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public PriorityQueueRTree NearestN(  
    Point p,  
    uint count,  
    double furthestDistance  
)
```

VB

```
Public Function NearestN (  
    p As Point,  
    count As UInteger,  
    furthestDistance As Double  
) As PriorityQueueRTree
```

C++

```
public:  
PriorityQueueRTree^ NearestN(  
    Point p,  
    unsigned int count,  
    double furthestDistance  
)
```

F#

```
member NearestN :  
    p : Point *  
    count : uint32 *  
    furthestDistance : float -> PriorityQueueRTree
```

Parameters

p

Type: [VelocityDBExtensions.Spatial.Point](#)

the point we are looking for

count

Type: [System.UInt32](#)

max number of rectangles to look for

furthestDistance

Type: [System.Double](#)

VelocityDB Class Library

The furthest distance away from the rectangle to search. Rectangles further than this will not be found.

Return Value

Type: [PriorityQueueRTree](#)

a PriorityQueue containing the found rectangles and their priorities (distances from point)

RTree.Remove Method

Removes a rectangle from the Rtree

Namespace: [VelocityDBExtensions.Spatial](#)

Assembly: VelocityDBExtensions (in VelocityDBExtensions.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public bool Remove(  
    Rectangle r  
)
```

VB

```
Public Function Remove (  
    r As Rectangle  
) As Boolean
```

C++

```
public:  
bool Remove(  
    Rectangle r  
)
```

F#

```
member Remove :  
    r : Rectangle -> bool
```

Parameters

r

Type: [VelocityDBExtensions.Spatial.Rectangle](#)

the rectangle to delete

Return Value

Type: [Boolean](#)

true if rectangle deleted otherwise false

Extension Methods

| Name | Description |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  ExportToCSV | Export all persistent objects to .csv files, one file for each Type and version of Type. This is preview release, format may change. ImportFromCSV can be used to recreate your data. Note that Microsoft Excel can't handle many of these CSV files due to a field value limitation (at about 33000 chars) Notepad++ is one application that can read these files. Some fields like array data are encoded http://msdn.microsoft.com/en-us/library/dhx0d524(v=vs.110).aspx (Defined by ImportExportCsv.) |
|  ExportToJson(T)(UInt64) | Overloaded. (Defined by JsonImportExport.) |
|  ExportToJson(T)(Oid) | Overloaded. (Defined by JsonImportExport.) |
|  ExportToJson(T)(Boolean, Boolean) | Overloaded. (Defined by JsonImportExport.) |
|  ImportFromCSV | Restores database files, pages and objects from a .csv file data created with ExportToCSV (Defined by ImportExportCsv.) |
|  ImportJson(T) | (Defined by JsonImportExport.) |
|  MicrosoftSync | (Defined by Sync.) |
|  SyncWith(SessionBase) | Overloaded. (Defined by Sync.) |
|  SyncWith(SessionBase, Func(SessionBase, UInt64, Change, Boolean)) | Overloaded. (Defined by Sync.) |

AzureBlobSession Constructor

Initializes a new instance of the [AzureBlobSession](#) class

Namespace: [VelocityDBExtensions2](#)

Assembly: VelocityDBExtensions2 (in VelocityDBExtensions2.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public AzureBlobSession(
    string connectionString,
    string systemContainerName,
    int waitForLockMilliseconds = 5000,
    bool optimisticLocking = true,
    bool enableCache = true,
    CacheEnum objectCachingDefaultPolicy = CacheEnum.Yes
)
```

VB

```
Public Sub New (
    connectionString As String,
    systemContainerName As String,
    Optional waitForLockMilliseconds As Integer = 5000,
    Optional optimisticLocking As Boolean = true,
    Optional enableCache As Boolean = true,
    Optional objectCachingDefaultPolicy As CacheEnum = CacheEnum.Yes
)
```

C++

```
public:
    AzureBlobSession(
        String^ connectionString,
        String^ systemContainerName,
        int waitForLockMilliseconds = 5000,
        bool optimisticLocking = true,
        bool enableCache = true,
        CacheEnum objectCachingDefaultPolicy = CacheEnum::Yes
    )
```

F#

```
new :
    connectionString : string *
    systemContainerName : string *
    ?waitForLockMilliseconds : int *
    ?optimisticLocking : bool *
    ?enableCache : bool *
    ?objectCachingDefaultPolicy : CacheEnum
(* Defaults:
    let _waitForLockMilliseconds = defaultArg waitForLockMilliseconds 5000
    let _optimisticLocking = defaultArg optimisticLocking true
    let _enableCache = defaultArg enableCache true
```

```
        let_objectCachingDefaultPolicy = defaultArg
objectCachingDefaultPolicy CacheEnum.Yes
*)
-> AzureBlobSession
```

Parameters

connectionString

Type: [System.String](#)

[Missing <param name="connectionString"/> documentation for "M:VelocityDBExtensions2.AzureBlobSession.#ctor(System.String,System.String,System.Int32,System.Boolean,System.Boolean,VelocityDb.CacheEnum)"]

systemContaineName

Type: [System.String](#)

[Missing <param name="systemContaineName"/> documentation for "M:VelocityDBExtensions2.AzureBlobSession.#ctor(System.String,System.String,System.Int32,System.Boolean,System.Boolean,VelocityDb.CacheEnum)"]

waitForLockMilliseconds (Optional)

Type: [System.Int32](#)

[Missing <param name="waitForLockMilliseconds"/> documentation for "M:VelocityDBExtensions2.AzureBlobSession.#ctor(System.String,System.String,System.Int32,System.Boolean,System.Boolean,VelocityDb.CacheEnum)"]

optimisticLocking (Optional)

Type: [System.Boolean](#)

[Missing <param name="optimisticLocking"/> documentation for "M:VelocityDBExtensions2.AzureBlobSession.#ctor(System.String,System.String,System.Int32,System.Boolean,System.Boolean,VelocityDb.CacheEnum)"]

enableCache (Optional)

Type: [System.Boolean](#)

[Missing <param name="enableCache"/> documentation for "M:VelocityDBExtensions2.AzureBlobSession.#ctor(System.String,System.String,System.Int32,System.Boolean,System.Boolean,VelocityDb.CacheEnum)"]

objectCachingDefaultPolicy (Optional)

Type: [VelocityDb.CacheEnum](#)

[Missing <param name="objectCachingDefaultPolicy"/> documentation for "M:VelocityDBExtensions2.AzureBlobSession.#ctor(System.String,System.String,System.Int32,System.Boolean,System.Boolean,VelocityDb.CacheEnum)"]

AzureBlobSession.WritePageBytes Method

[Missing <summary> documentation for

"M:VelocityDBExtensions2.AzureBlobSession.WritePageBytes(System.Byte[],VelocityDb.Page,System.Collections.Generic.Dictionary{System.UInt16,System.Int64},System.UInt64,System.IO.Stream,System.Byte[])"]

Namespace: [VelocityDBExtensions2](#)

Assembly: VelocityDBExtensions2 (in VelocityDBExtensions2.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public override void WritePageBytes (
    byte[] bytes,
    Page page,
    Dictionary<ushort, long> dbPageWrites,
    ulong transaction,
    Stream fStream,
    byte[] pageInfoBytes
)
```

VB

```
Public Overrides Sub WritePageBytes (
    bytes As Byte(),
    page As Page,
    dbPageWrites As Dictionary(Of UShort, Long),
    transaction As ULong,
    fStream As Stream,
    pageInfoBytes As Byte()
)
```

C++

```
public:
virtual void WritePageBytes (
    array<unsigned char>^ bytes,
    Page^ page,
    Dictionary<unsigned short, long long>^ dbPageWrites,
    unsigned long long transaction,
    Stream^ fStream,
    array<unsigned char>^ pageInfoBytes
) override
```

F#

```
abstract WritePageBytes :
    bytes : byte[] *
    page : Page *
    dbPageWrites : Dictionary<uint16, int64> *
    transaction : uint64 *
    fStream : Stream *
    pageInfoBytes : byte[] -> unit
```

```
override WritePageBytes :  
    bytes : byte[] *  
    page : Page *  
    dbPageWrites : Dictionary<uint16, int64> *  
    transaction : uint64 *  
    fStream : Stream *  
    pageInfoBytes : byte[] -> unit
```

Parameters

bytes

Type: [System.Byte\[\]](#)

[Missing <param name="bytes"/> documentation for

"M:VelocityDBExtensions2.AzureBlobSession.WritePageBytes(System.Byte[],VelocityDb.Page,System.Collections.Generic.Dictionary{System.UInt16,System.Int64},System.UInt64,System.IO.Stream,System.Byte[])"

page

Type: [VelocityDb.Page](#)

[Missing <param name="page"/> documentation for

"M:VelocityDBExtensions2.AzureBlobSession.WritePageBytes(System.Byte[],VelocityDb.Page,System.Collections.Generic.Dictionary{System.UInt16,System.Int64},System.UInt64,System.IO.Stream,System.Byte[])"

dbPageWrites

Type: [System.Collections.Generic.Dictionary{UInt16, Int64}](#)

[Missing <param name="dbPageWrites"/> documentation for

"M:VelocityDBExtensions2.AzureBlobSession.WritePageBytes(System.Byte[],VelocityDb.Page,System.Collections.Generic.Dictionary{System.UInt16,System.Int64},System.UInt64,System.IO.Stream,System.Byte[])"

transaction

Type: [System.UInt64](#)

[Missing <param name="transaction"/> documentation for

"M:VelocityDBExtensions2.AzureBlobSession.WritePageBytes(System.Byte[],VelocityDb.Page,System.Collections.Generic.Dictionary{System.UInt16,System.Int64},System.UInt64,System.IO.Stream,System.Byte[])"

fStream

Type: [System.IO.Stream](#)

[Missing <param name="fStream"/> documentation for

"M:VelocityDBExtensions2.AzureBlobSession.WritePageBytes(System.Byte[],VelocityDb.Page,System.Collections.Generic.Dictionary{System.UInt16,System.Int64},System.UInt64,System.IO.Stream,System.Byte[])"

pageInfoBytes

Type: [System.Byte\[\]](#)

[Missing <param name="pageInfoBytes"/> documentation for

"M:VelocityDBExtensions2.AzureBlobSession.WritePageBytes(System.Byte[],VelocityDb.Page,System.

Collections.Generic.Dictionary{System.UInt16,System.Int64},System.UInt64,System.IO.Stream,System.Byte[]"

[VelocityDb.Session.SessionNoServer](#)

VelocityDBExtensions2.AzureSession

Namespace: [VelocityDBExtensions2](#)

Assembly: VelocityDBExtensions2 (in VelocityDBExtensions2.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public class AzureSession : SessionNoServer
```

VB

```
Public Class AzureSession
    Inherits SessionNoServer
```

C++

```
public ref class AzureSession : public SessionNoServer
```

F#

```
type AzureSession =
    class
        inherit SessionNoServer
    end
```

The **AzureSession** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------|-------------------------------------------------------------|
|  | AzureSession | Initializes a new instance of the AzureSession class |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|----------------------------------------------------------------------------------------------|
|  | ContainsDatabase | (Overrides SessionBase.ContainsDatabase(DatabaseLocation, UInt32, String).) |
|  | CreateDirectory | (Overrides SessionBase.CreateDirectory(String).) |
|  | DatabaseStillExist | (Overrides SessionBase.DatabaseStillExist(Database).) |

| | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|
|  DeleteFile | (Overrides SessionBase.DeleteFile(FileInfo).) |
|  FileOpen(Database, FileAccess, String, FileMode, Boolean, Int32, Boolean) | (Overrides SessionBase.FileOpen(Database, FileAccess, String, FileMode, Boolean, Int32, Boolean).) |
|  FileOpen(FileInfo, FileAccess, String, FileShare, FileMode, Int32, Boolean, Boolean) | (Overrides SessionBase.FileOpen(FileInfo, FileAccess, String, FileShare, FileMode, Int32, Boolean, Boolean).) |
|  OpenAllDatabases | (Overrides SessionBase.OpenAllDatabases(Boolean).) |

Extension Methods

| Name | Description |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  ExportToCSV | Export all persistent objects to .csv files, one file for each Type and version of Type. This is preview release, format may change. ImportFromCSV can be used to recreate your data. Note that Microsoft Excel can't handle many of these CSV files due to a field value limitation (at about 33000 chars) Notepad++ is one application that can read these files. Some fields like array data are encoded http://msdn.microsoft.com/en-us/library/dhx0d524(v=vs.110).aspx (Defined by ImportExportCsv.) |
|  ExportToJson(T)(UInt64) | Overloaded. (Defined by JsonImportExport.) |
|  ExportToJson(T)(Oid) | Overloaded. (Defined by JsonImportExport.) |
|  ExportToJson(T)(Boolean, Boolean) | Overloaded. (Defined by JsonImportExport.) |
|  ImportFromCSV | Restores database files, pages and objects from a .csv file data created with ExportToCSV (Defined by ImportExportCsv.) |
|  ImportJson(T) | (Defined by JsonImportExport.) |
|  MicrosoftSync | (Defined by Sync.) |
|  SyncWith(SessionBase) | Overloaded. (Defined by Sync.) |
|  SyncWith(SessionBase, Func(SessionBase, UInt64, Change, Boolean)) | Overloaded. (Defined by Sync.) |

AzureSession Constructor

Initializes a new instance of the [AzureSession](#) class

Namespace: [VelocityDBExtensions2](#)

Assembly: VelocityDBExtensions2 (in VelocityDBExtensions2.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public AzureSession(  
    string connectionString,  
    string shareName,  
    string systemDir,  
    int waitForLockMilliseconds = 5000,  
    bool optimisticLocking = true,  
    bool enableCache = true,  
    CacheEnum objectCachingDefaultPolicy = CacheEnum.Yes  
)
```

VB

```
Public Sub New (  
    connectionString As String,  
    shareName As String,  
    systemDir As String,  
    Optional waitForLockMilliseconds As Integer = 5000,  
    Optional optimisticLocking As Boolean = true,  
    Optional enableCache As Boolean = true,  
    Optional objectCachingDefaultPolicy As CacheEnum = CacheEnum.Yes  
)
```

C++

```
public:  
AzureSession(  
    String^ connectionString,  
    String^ shareName,  
    String^ systemDir,  
    int waitForLockMilliseconds = 5000,  
    bool optimisticLocking = true,  
    bool enableCache = true,  
    CacheEnum objectCachingDefaultPolicy = CacheEnum::Yes  
)
```

F#

```
new :  
    connectionString : string *  
    shareName : string *  
    systemDir : string *  
    ?waitForLockMilliseconds : int *  
    ?optimisticLocking : bool *  
    ?enableCache : bool *  
    ?objectCachingDefaultPolicy : CacheEnum
```

```
(* Defaults:
    let _waitForLockMilliseconds = defaultArg waitForLockMilliseconds 5000
    let _optimisticLocking = defaultArg optimisticLocking true
    let _enableCache = defaultArg enableCache true
    let _objectCachingDefaultPolicy = defaultArg
objectCachingDefaultPolicy CacheEnum.Yes
*)
-> AzureSession
```

Parameters

connectionString

Type: [System.String](#)

[Missing <param name="connectionString"/> documentation for "M:VelocityDBExtensions2.AzureSession.#ctor(System.String,System.String,System.String,System.Int32,System.Boolean,System.Boolean,VelocityDb.CacheEnum)"]

shareName

Type: [System.String](#)

[Missing <param name="shareName"/> documentation for "M:VelocityDBExtensions2.AzureSession.#ctor(System.String,System.String,System.String,System.Int32,System.Boolean,System.Boolean,VelocityDb.CacheEnum)"]

systemDir

Type: [System.String](#)

[Missing <param name="systemDir"/> documentation for "M:VelocityDBExtensions2.AzureSession.#ctor(System.String,System.String,System.String,System.Int32,System.Boolean,System.Boolean,VelocityDb.CacheEnum)"]

waitForLockMilliseconds (Optional)

Type: [System.Int32](#)

[Missing <param name="waitForLockMilliseconds"/> documentation for "M:VelocityDBExtensions2.AzureSession.#ctor(System.String,System.String,System.String,System.Int32,System.Boolean,System.Boolean,VelocityDb.CacheEnum)"]

optimisticLocking (Optional)

Type: [System.Boolean](#)

[Missing <param name="optimisticLocking"/> documentation for "M:VelocityDBExtensions2.AzureSession.#ctor(System.String,System.String,System.String,System.Int32,System.Boolean,System.Boolean,VelocityDb.CacheEnum)"]

enableCache (Optional)

Type: [System.Boolean](#)

IdentityUser Constructor (String)

Initializes a new instance of the [IdentityUser](#) class

Namespace: [VelocityDBExtensions2.AspNet.Identity](#)

Assembly: VelocityDBExtensions2 (in VelocityDBExtensions2.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public IdentityUser(  
    string username  
)
```

VB

```
Public Sub New (  
    username As String  
)
```

C++

```
public:  
IdentityUser(  
    String^ username  
)
```

F#

```
new :  
    username : string -> IdentityUser
```

Parameters

username

Type: [System.String](#)

[Missing <param name="username"/> documentation for "M:VelocityDBExtensions2.AspNet.Identity.IdentityUser.#ctor(System.String)"]

IdentityUser.IdentityUser Properties

The [IdentityUser](#) type exposes the following members.

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------------|-------------|
|  | AccessFailedCount | |
|  | Claims | |
|  | Email | |
|  | EmailConfirmed | |
|  | LockoutEnabled | |
|  | LockoutEndDateUtc | |
|  | PasswordHash | |
|  | PhoneNumber | |
|  | PhoneNumberConfirmed | |
|  | Roles | |
|  | SecurityStamp | |
|  | TwoFactorEnabled | |
|  | UserLoginIds | |
|  | UserName | |

IdentityUser.AccessFailedCount Property

[Missing <summary> documentation for

"P:VelocityDBExtensions2.AspNet.Identity.IdentityUser.AccessFailedCount"]

Namespace: [VelocityDBExtensions2.AspNet.Identity](#)

Assembly: VelocityDBExtensions2 (in VelocityDBExtensions2.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public int AccessFailedCount { get; set; }
```

VB

```
Public Property AccessFailedCount As Integer  
    Get  
    Set
```

C++

```
public:  
property int AccessFailedCount {  
    int get ();  
    void set (int value);  
}
```

F#

```
member AccessFailedCount : int with get, set
```

Property Value

Type: [Int32](#)

VelocityDBExtensions2.AspNet.Identity.RoleStore(T)

Namespace: [VelocityDBExtensions2.AspNet.Identity](#)

Assembly: VelocityDBExtensions2 (in VelocityDBExtensions2.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public class RoleStore<T> : IQueryableRoleStore<T, ulong>,
    IRoleStore<T, ulong>, IDisposable
where T : IdentityRole
```

VB

```
Public Class RoleStore(Of T As IdentityRole)
    Implements IQueryableRoleStore(Of T, ULong), IRoleStore(Of T, ULong),
    IDisposable
```

C++

```
generic<typename T>
where T : IdentityRole
public ref class RoleStore : IQueryableRoleStore<T, unsigned long long>,
    IRoleStore<T, unsigned long long>, IDisposable
```

F#

```
type RoleStore<'T when 'T : IdentityRole> =
    class
        interface IQueryableRoleStore<'T, uint64>
        interface IRoleStore<'T, uint64>
        interface IDisposable
    end
```

Type Parameters

T

[Missing <typeparam name="T"/> documentation for "T:VelocityDBExtensions2.AspNet.Identity.RoleStore`1"]

The RoleStore(T) type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------------|------------------------------------------------------|
|  | RoleStore(T) | Initializes a new instance of the RoleStore(T) class |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------|-------------|
|  | Roles | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------|-------------------------------------------------|
|  | CreateAsync | |
|  | DeleteAsync | |
|  | Dispose | Releases all resources used by the RoleStore(T) |
|  | FindByIdAsync | |
|  | FindByNameAsync | |
|  | UpdateAsync | |

[VelocityDb.OptimizedPersistable](#)

VelocityDBExtensions2.AspNet.Identity.UserLoginInfoAdapter

Namespace: [VelocityDBExtensions2.AspNet.Identity](#)

Assembly: VelocityDBExtensions2 (in VelocityDBExtensions2.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public class UserLoginInfoAdapter : OptimizedPersistable
```

VB

```
Public Class UserLoginInfoAdapter
    Inherits OptimizedPersistable
```

C++

```
public ref class UserLoginInfoAdapter : public OptimizedPersistable
```

F#

```
type UserLoginInfoAdapter =
    class
        inherit OptimizedPersistable
    end
```

The **UserLoginInfoAdapter** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------------|---------------------------------------------------------------------|
|  | UserLoginInfoAdapter | Initializes a new instance of the UserLoginInfoAdapter class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------|-------------|
|  | LoginInfo | |
|  | UserId | |

Extension Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------|
|  | ToStringDetails(SessionBase, Boolean) | Overloaded. Object details as a string (Defined by Utilities.) |
|  | ToStringDetails(Schema, TypeVersion, Boolean) | Overloaded. Currently only used by Database Manager (Defined by Utilities.) |

"M:VelocityDBExtensions2.AspNet.Identity.UserStore`1.FindAsync(Microsoft.AspNet.Identity.UserLoginInfo)"]

Namespace: [VelocityDBExtensions2.AspNet.Identity](#)

Assembly: VelocityDBExtensions2 (in VelocityDBExtensions2.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public Task<T> FindAsync (
    UserLoginInfo login
)
```

VB

```
Public Function FindAsync (
    login As UserLoginInfo
) As Task(Of T)
```

C++

```
public:
virtual Task<T>^ FindAsync (
    UserLoginInfo^ login
) sealed
```

F#

```
abstract FindAsync :
    login : UserLoginInfo -> Task<'T>
override FindAsync :
    login : UserLoginInfo -> Task<'T>
```

Parameters

login

Type: **UserLoginInfo**

[Missing <param name="login"/> documentation for

"M:VelocityDBExtensions2.AspNet.Identity.UserStore`1.FindAsync(Microsoft.AspNet.Identity.UserLoginInfo)"]

Return Value

Type: [Task\(T\)](#)

[Missing <returns> documentation for

"M:VelocityDBExtensions2.AspNet.Identity.UserStore`1.FindAsync(Microsoft.AspNet.Identity.UserLoginInfo)"]

VelocityDB Class Library

Implements

IUserLoginStore.FindAsync(UserLoginInfo)

Namespace: [VelocityDBExtensions2.AspNet.Identity](#)

Assembly: VelocityDBExtensions2 (in VelocityDBExtensions2.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public Task<T> FindByEmailAsync(  
    string email  
)
```

VB

```
Public Function FindByEmailAsync (  
    email As String  
) As Task(Of T)
```

C++

```
public:  
virtual Task<T>^ FindByEmailAsync(  
    String^ email  
) sealed
```

F#

```
abstract FindByEmailAsync :  
    email : string -> Task<'T>  
override FindByEmailAsync :  
    email : string -> Task<'T>
```

Parameters

email

Type: [System.String](#)

[Missing <param name="email"/> documentation for "M:VelocityDBExtensions2.AspNet.Identity.UserStore`1.FindByEmailAsync(System.String)"]

Return Value

Type: [Task\(T\)](#)

[Missing <returns> documentation for "M:VelocityDBExtensions2.AspNet.Identity.UserStore`1.FindByEmailAsync(System.String)"]

Implements

UserStore(T).IsInRoleAsync Method

[Missing <summary> documentation for "M:VelocityDBExtensions2.AspNet.Identity.UserStore`1.IsInRoleAsync(`0,System.String)"]

Namespace: [VelocityDBExtensions2.AspNet.Identity](#)

Assembly: VelocityDBExtensions2 (in VelocityDBExtensions2.dll) Version: 11.1.0.0 (11.1.0)

Syntax

C#

```
public Task<bool> IsInRoleAsync(  
    T user,  
    string roleName  
)
```

VB

```
Public Function IsInRoleAsync (  
    user As T,  
    roleName As String  
) As Task(Of Boolean)
```

C++

```
public:  
virtual Task<bool>^ IsInRoleAsync(  
    T user,  
    String^ roleName  
) sealed
```

F#

```
abstract IsInRoleAsync :  
    user : 'T *  
    roleName : string -> Task<bool>  
override IsInRoleAsync :  
    user : 'T *  
    roleName : string -> Task<bool>
```

Parameters

user

Type: *T*

[Missing <param name="user"/> documentation for "M:VelocityDBExtensions2.AspNet.Identity.UserStore`1.IsInRoleAsync(`0,System.String)"]

roleName

Type: [System.String](#)

[Missing <param name="roleName"/> documentation for "M:VelocityDBExtensions2.AspNet.Identity.UserStore`1.IsInRoleAsync(`0,System.String)"]

VelocityDB Class Library

Return Value

Type: [Task\(Boolean\)](#)

[Missing <returns> documentation for

"M:VelocityDBExtensions2.AspNet.Identity.UserStore`1.IsInRoleAsync(`0,System.String)"]

VelocityGraph Namespace

The **VelocityGraph** namespace contains classes for the VelocityGraph Graph Database.

Classes

| Class | Description |
|--------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Edge | An Edge links two vertices. Along with its key/value properties, an edge has both a directionality and a label. The directionality determines which vertex is the tail vertex (out vertex) and which vertex is the head vertex (in vertex). The edge label determines the type of relationship that exists between the two vertices. Diagrammatically, outVertex ---label---> inVertex. |
|  EdgeType | All edges have a type that is identified as a EdgeType. Each EdgeType have a name, can be persisted and tracks all edges of its type. The edge type also knows about properties used by its type. |
|  Element | Base class for Edge and Vertex |
|  Graph | Graph is the root object of a graph. Most graph api is on this class but useful api also exist on VertexType and EdgeType . |
|  GraphJsonSettings | |
|  PropertyType | Keeper of Edge and Vertex properties |
|  PropertyTypeNoDuplicateValues(T) | Used with string property type values. Avoids storing duplicate string values. |
|  PropertyTypeT(T) | Keeper of Edge and Vertex properties |
|  Vertex | A vertex maintains pointers to both a set of incoming and outgoing edges. The outgoing edges are those edges for which the vertex is the tail. The incoming edges are those edges for which the vertex is the head. Diagrammatically, ---inEdges---> vertex ---outEdges---> |
|  VertexType | All vertices have a type that is identified as a VertexType. Each VertexType have a name, can be persisted and tracks all vertices of its type. The vertex type also knows about properties used by its type. |

Enumerations

| Enumeration | Description |
|------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  DataType | Choose IOptimizedPersistable instead of Object for property types where you only will store objects of type IOptimizedPersistable as property value. |
|  PropertyKind | A property can be index or not or index can require each entry to be unique |

Data Type Enumeration

Choose [IOptimizedPersistable](#) instead of [Object](#) for property types where you only will store objects of type IOptimizedPersistable as property value.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public enum DataType
```

VB

```
Public Enumeration DataType
```

C++

```
public enum class DataType
```

F#

```
type DataType
```

Members

| Member name | Value | Description |
|------------------------------|-------|-----------------------------------------------------|
| Boolean | 0 | Correspond to Boolean |
| Integer | 1 | Correspond to Int32 |
| Long | 2 | Correspond to Int64 |
| Double | 3 | Correspond to Double |
| Single | 4 | Correspond to Single |
| DateTime | 5 | Correspond to DateTime |
| String | 6 | Correspond to String |
| Object | 7 | Correspond to Object |
| IOptimizedPersistable | 8 | Correspond to IOptimizedPersistable |

[VelocityGraph Namespace](#)

Edge Class

An Edge links two vertices. Along with its key/value properties, an edge has both a directionality and a label. The directionality determines which vertex is the tail vertex (out vertex) and which vertex is the head vertex (in vertex). The edge label determines the type of relationship that exists between the two vertices. Diagrammatically, outVertex ---label--> inVertex.

Inheritance Hierarchy

[System.Object](#)

[VelocityGraph.Element](#)

VelocityGraph.Edge

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class Edge : Element, IEdge, IElement,
    IDictionary<string, Object>, ICollection<KeyValuePair<string, Object>>,
    IEnumerable<KeyValuePair<string, Object>>, IEnumerable,
    IDictionary, ICollection, IEqualityComparer<Edge>
```

VB

```
Public Class Edge
    Inherits Element
    Implements IEdge, IElement, IDictionary(Of String, Object),
    ICollection(Of KeyValuePair(Of String, Object)), IEnumerable(Of
    KeyValuePair(Of String, Object)),
    IEnumerable, IDictionary, ICollection, IEqualityComparer(Of Edge)
```

C++

```
public ref class Edge : public Element,
    IEdge, IElement, IDictionary<String^, Object^>,
    ICollection<KeyValuePair<String^, Object^>>,
    IEnumerable<KeyValuePair<String^, Object^>>,
    IEnumerable, IDictionary, ICollection, IEqualityComparer<Edge^>
```

F#

```
type Edge =
    class
        inherit Element
        interface IEdge
        interface IElement
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
```

```

interface IDictionary
interface ICollection
interface IEqualityComparer<Edge>
end

```

The **Edge** type exposes the following members.

Properties

| Name | Description |
|------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  EdgeId | Gets the edge id |
|  EdgeType | Gets the edge type |
|  Head | Gets the head vertex |
|  Id | An identifier that is unique to its inheriting class. All vertices of a graph must have unique identifiers. All edges of a graph must have unique identifiers. (Overrides DictionaryElement.Id.) |
|  Tail | Gets the tail vertex |

Methods

| Name | Description |
|---------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Equals(Object) | Determines whether the specified Edge is equal to the current one. (Overrides Object.Equals(Object).) |
|  Equals(Edge, Edge) | Determines whether the specified objects are equal. |
|  GetEdgePeer | Gets the other end for the given edge. |
|  GetHashCode() | Use id as hash code (Overrides Element.GetHashCode().) |
|  GetHashCode(Edge) | Returns a hash code for the specified object. |
|  GetProperty(String) | Return the object value associated with the provided string key. If no value exists for that key, return null. (Overrides DictionaryElement.GetProperty(String).) |
|  GetProperty(PropertyType) | Gets the Value for the given Property id |
|  GetPropertyKeys | Return all the keys associated with the element. (Overrides DictionaryElement.GetPropertyKeys().) |
|  Remove | Remove the edge from the graph. (Overrides DictionaryElement.Remove().) |
|  RemoveProperty | Un-assigns a key/value property from the edge. The object value of the removed property is returned. (Overrides DictionaryElement.RemoveProperty(String).) |
|  SetProperty(String, Object) | Assign a key/value property to the edge. If a value already exists for this key, then the previous key/value is overwritten. (Overrides DictionaryElement.SetProperty(String, Object).) |

| | |
|------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
|  SetProperty(PropertyType, IComparable) | Sets the value for a property |
|  ToString | Returns a string that represents the current object. (Overrides Object.ToString() .) |

Extension Methods

| Name | Description |
|------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers .) |
|  CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers .) |
|  EdgeString | (Defined by StringFactory .) |
|  GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers .) |
|  HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers .) |
|  HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers .) |
|  RelabelEdge | An edge is relabeled by creating a new edge with the same properties, but new label. Note that an edge is deleted and an edge is added. (Defined by EdgeHelpers .) |
|  SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers .) |
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers .) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws <code>ArgumentException</code> whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers .) |

Edge.Edge Methods

The [Edge](#) type exposes the following members.

Methods

| Name | Description |
|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Equals(Object) | Determines whether the specified Edge is equal to the current one. (Overrides Object.Equals(Object) .) |
|  Equals(Edge, Edge) | Determines whether the specified objects are equal. |
|  GetEdgePeer | Gets the other end for the given edge. |
|  GetHashCode() | Use id as hash code (Overrides Element.GetHashCode() .) |
|  GetHashCode(Edge) | Returns a hash code for the specified object. |
|  GetProperty(String) | Return the object value associated with the provided string key. If no value exists for that key, return null. (Overrides DictionaryElement.GetProperty(String) .) |
|  GetProperty(PropertyType) | Gets the Value for the given Property id |
|  GetPropertyKeys | Return all the keys associated with the element. (Overrides DictionaryElement.GetPropertyKeys() .) |
|  Remove | Remove the edge from the graph. (Overrides DictionaryElement.Remove() .) |
|  RemoveProperty | Un-assigns a key/value property from the edge. The object value of the removed property is returned. (Overrides DictionaryElement.RemoveProperty(String) .) |
|  SetProperty(String, Object) | Assign a key/value property to the edge. If a value already exists for this key, then the previous key/value is overwritten. (Overrides DictionaryElement.SetProperty(String, Object) .) |
|  SetProperty(PropertyType, IComparable) | Sets the value for a property |
|  ToString | Returns a string that represents the current object. (Overrides Object.ToString() .) |

Extension Methods

| Name | Description |
|--------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AreEqual | A standard method for determining if two elements are equal. This method should be used by any Element.equals() implementation to ensure consistent behavior. (Defined by ElementHelpers .) |

Edge.Equals Method (Object)

Determines whether the specified [Edge](#) is equal to the current one.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override bool Equals(  
    Object other  
)
```

VB

```
Public Overrides Function Equals (  
    other As Object  
) As Boolean
```

C++

```
public:  
virtual bool Equals(  
    Object^ other  
) override
```

F#

```
abstract Equals :  
    other : Object -> bool  
override Equals :  
    other : Object -> bool
```

Parameters

other

Type: [System.Object](#)

The object to compare with the current object.

Return Value

Type: [Boolean](#)

`true` if the specified object is equal to the current object; otherwise, `false`.

See Also

[Edge Class](#)

[Equals Overload](#)

[VelocityGraph Namespace](#)

Edge.Equals Method (Edge, Edge)

Determines whether the specified objects are equal.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public bool Equals(  
    Edge x,  
    Edge y  
)
```

VB

```
Public Function Equals (  
    x As Edge,  
    y As Edge  
) As Boolean
```

C++

```
public:  
virtual bool Equals(  
    Edge^ x,  
    Edge^ y  
) sealed
```

F#

```
abstract Equals :  
    x : Edge *  
    y : Edge -> bool  
override Equals :  
    x : Edge *  
    y : Edge -> bool
```

Parameters

x

Type: [VelocityGraph.Edge](#)

The first object of type *T* to compare.

y

Type: [VelocityGraph.Edge](#)

The second object of type *T* to compare.

Return Value

Type: [Boolean](#)

`true` (True in Visual Basic) if the specified objects are equal; otherwise, `false` (False in Visual Basic).

VelocityDB Class Library

Implements

[IEqualityComparer\(T\).Equals\(T, T\)](#)

Gets the other end for the given edge.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Vertex GetEdgePeer (
    Vertex vertex
)
```

VB

```
Public Function GetEdgePeer (
    vertex As Vertex
) As Vertex
```

C++

```
public:
Vertex^ GetEdgePeer (
    Vertex^ vertex
)
```

F#

```
member GetEdgePeer :
    vertex : Vertex -> Vertex
```

Parameters

vertex

Type: [VelocityGraph.Vertex](#)

A vertex, it must be one of the ends of the edge.

Return Value

Type: [Vertex](#)

The other end of the edge.

[VelocityGraph Namespace](#)

Edge.GetHashCode Method (Edge)

Returns a hash code for the specified object.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public int GetHashCode(  
    Edge obj  
)
```

VB

```
Public Function GetHashCode (  
    obj As Edge  
) As Integer
```

C++

```
public:  
virtual int GetHashCode (  
    Edge^ obj  
) sealed
```

F#

```
abstract GetHashCode :  
    obj : Edge -> int  
override GetHashCode :  
    obj : Edge -> int
```

Parameters

obj

Type: [VelocityGraph.Edge](#)

The [Object](#) for which a hash code is to be returned.

Return Value

Type: [Int32](#)

A hash code for the specified object.

Implements

[IEqualityComparer\(T\).GetHashCode\(T\)](#)

Exceptions

| Exception | Condition |
|---------------------------------------|----------------------------------------------------------------------------------------------------------|
| ArgumentNullException | The type of <i>obj</i> is a reference type and <i>obj</i> is a null reference (Nothing in Visual Basic). |

Syntax

C#

```
public IComparable GetProperty(  
    PropertyType property  
)
```

VB

```
Public Function GetProperty (  
    property As PropertyType  
) As IComparable
```

C++

```
public:  
IComparable^ GetProperty(  
    PropertyType^ property  
)
```

F#

```
member GetProperty :  
    property : PropertyType -> IComparable
```

Parameters

property

Type: [VelocityGraph.PropertyType](#)

Property type identifier.

Return Value

Type: [IComparable](#)

Property value as [IComparable](#)

See Also

[Edge Class](#)

[GetProperty Overload](#)

[VelocityGraph Namespace](#)

Edge.GetPropertyKeys Method

Return all the keys associated with the element.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override IEnumerable<string> GetPropertyKeys ()
```

VB

```
Public Overrides Function GetPropertyKeys As IEnumerable(Of String)
```

C++

```
public:  
virtual IEnumerable<String^>^ GetPropertyKeys () override
```

F#

```
abstract GetPropertyKeys : unit -> IEnumerable<string>  
override GetPropertyKeys : unit -> IEnumerable<string>
```

Return Value

Type: [IEnumerable\(String\)](#)

the set of all string keys associated with the element

Implements

[IElement.GetPropertyKeys\(\)](#)

[IElement.GetPropertyKeys\(\)](#)

See Also

[Edge Class](#)

[VelocityGraph Namespace](#)

Edge.Remove Method

Remove the edge from the graph.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override void Remove ()
```

VB

```
Public Overrides Sub Remove
```

C++

```
public:  
virtual void Remove () override
```

F#

```
abstract Remove : unit -> unit  
override Remove : unit -> unit
```

Implements

[IElement.Remove\(\)](#)

[IElement.Remove\(\)](#)

See Also

[VelocityGraph Namespace](#)

Edge.RemoveProperty Method

Un-assigns a key/value property from the edge. The object value of the removed property is returned.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override Object RemoveProperty(  
    string key  
)
```

VB

```
Public Overrides Function RemoveProperty (  
    key As String  
) As Object
```

C++

```
public:  
virtual Object^ RemoveProperty(  
    String^ key  
) override
```

F#

```
abstract RemoveProperty :  
    key : string -> Object  
override RemoveProperty :  
    key : string -> Object
```

Parameters

key

Type: [System.String](#)

the key of the property to remove from the edge

Return Value

Type: [Object](#)

the object value associated with that key prior to removal

Implements

[IElement.RemoveProperty\(String\)](#)

[IElement.RemoveProperty\(String\)](#)

```
abstract SetProperty :  
    key : string *  
    value : Object -> unit  
override SetProperty :  
    key : string *  
    value : Object -> unit
```

Parameters

key

Type: [System.String](#)

the string key of the property

value

Type: [System.Object](#)

the object value o the property

VelocityDB Class Library

Implements

[IElement.SetProperty\(String, Object\)](#)

[IElement.SetProperty\(String, Object\)](#)

See Also

[Edge Class](#)

[SetProperty Overload](#)

[VelocityGraph Namespace](#)

Edge.SetProperty Method (PropertyType, IComparable)

Sets the value for a property

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void SetProperty(  
    PropertyType property,  
    IComparable v  
)
```

VB

```
Public Sub SetProperty (  
    property As PropertyType,  
    v As IComparable  
)
```

C++

```
public:  
void SetProperty(  
    PropertyType^ property,  
    IComparable^ v  
)
```

F#

```
member SetProperty :  
    property : PropertyType *  
    v : IComparable -> unit
```

Parameters

property

Type: [VelocityGraph.PropertyType](#)

The property to set

v

Type: [System.IComparable](#)

the value

See Also

[Edge Class](#)

[SetProperty Overload](#)

[VelocityGraph Namespace](#)

Edge.ToString Method

Returns a string that represents the current object.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override string ToString()
```

VB

```
Public Overrides Function ToString As String
```

C++

```
public:  
virtual String^ ToString() override
```

F#

```
abstract ToString : unit -> string  
override ToString : unit -> string
```

Return Value

Type: [String](#)

A string that represents the current object.

[VelocityGraph Namespace](#)

EdgeType Class

All edges have a type that is identified as a EdgeType. Each EdgeType have a name, can be persisted and tracks all edges of its type. The edge type also knows about properties used by its type.

Inheritance Hierarchy

[System.Object](#)

[VelocityDb.OptimizedPersistable](#)

VelocityGraph.EdgeType

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
[SerializableAttribute]
public class EdgeType : OptimizedPersistable, IComparable<EdgeType>,
    IEqualityComparer<EdgeType>
```

VB

```
<SerializableAttribute>
Public Class EdgeType
    Inherits OptimizedPersistable
    Implements IComparable(Of EdgeType), IEqualityComparer(Of EdgeType)
```

C++

```
[SerializableAttribute]
public ref class EdgeType : public OptimizedPersistable,
    IComparable<EdgeType^>, IEqualityComparer<EdgeType^>
```

F#

```
[<SerializableAttribute>]
type EdgeType =
    class
        inherit OptimizedPersistable
        interface IComparable<EdgeType>
        interface IEqualityComparer<EdgeType>
    end
```

The **EdgeType** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------|--------------------------|
|  | EdgeType | Creates a new edge type. |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------------|----------------------------------------------------------------------|
|  | Directed | Is Directed if edge type is not bidirectional |
|  | HeadType | Gets the Head VertexType of the edge (might not be set) |
|  | MyGraph | Graph for which this EdgeType belongs to |
|  | SubTypes | Sub types of this EdgeType |
|  | TailType | Gets the Tail VertexType of the edge (might not be set) |
|  | TypeId | Gets the id of the edge type |
|  | TypeName | Gets the name of the this edge type |
|  | Unrestricted | Is this edge type restricted to a certain head and tail vertex type? |

Methods

| | Name | Description |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------|
|   | Compare | Compares two edge types by id |
|  | CompareTo | Compares two EdgeType objects by id |
|  | CountEdges | Get a count of existing edges of this type |
|  | Equals | Compares two edge types by id |
|  | FindProperty | Gets the property type given a property type name |
|  | GetEdge(Int32, Boolean, Boolean) | Gets an edge given an edge id. Throws if no such edge exist. |
|  | GetEdge(Int32, Vertex, Vertex) | Get an edge for a given id |
|  | GetEdges | Enumerates all edges of this type |
|  | GetHashCode | Get a hash code for an edge type based on type id |
|  | GetPropertyKeys | Return all the keys associated with the edge type. |
|  | GetPropertyTypes | Return all the property types associated with edge type. |
|  | GetPropertyValue | Gets a property value given an edge id and a property type |
|  | NewEdge | Create an edge between tail and head vertex |
|  | NewEdgeX | Not yet implemented |
|  | NewProperty | Creates a new Property. |
|  | Remove | Removes this EdgeType from a graph. An exception is thrown if the EdgeType is in use. |
|  | RemoveEdge | Removing an edge from this edge type |

VelocityDB Class Library

| | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  SetPropertyValue(EdgeType, Int32, PropertyType, IComparable) | Sets an edge property given an edge id, property type and a value |
|  SetPropertyValue(VertexType, Int32, PropertyType, IComparable) | |
|  ToString | Displays class name plus object id (Overrides OptimizedPersistable.ToString() .) |
|  Unpersist | Removes an object from the persistent store and makes the object a transient object. It does not automatically make referenced objects unpersisted. Best way to do so is to override this virtual function in your own classes. (Overrides OptimizedPersistable.Unpersist(SessionBase) .) |

Extension Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------|
|  | ToStringDetails(SessionBase, Boolean) | Overloaded. Object details as a string (Defined by Utilities .) |
|  | ToStringDetails(Schema, TypeVersion, Boolean) | Overloaded. Currently only used by Database Manager (Defined by Utilities .) |

[VelocityGraph Namespace](#)

EdgeType Constructor

Creates a new edge type.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public EdgeType(  
    int aTypeId,  
    string aTypeName,  
    VertexType tailType,  
    VertexType headType,  
    bool birectional,  
    EdgeType baseType,  
    Graph graph  
)
```

VB

```
Public Sub New (  
    aTypeId As Integer,  
    aTypeName As String,  
    tailType As VertexType,  
    headType As VertexType,  
    birectional As Boolean,  
    baseType As EdgeType,  
    graph As Graph  
)
```

C++

```
public:  
EdgeType (  
    int aTypeId,  
    String^ aTypeName,  
    VertexType^ tailType,  
    VertexType^ headType,  
    bool birectional,  
    EdgeType^ baseType,  
    Graph^ graph  
)
```

F#

```
new :  
    aTypeId : int *  
    aTypeName : string *  
    tailType : VertexType *  
    headType : VertexType *  
    birectional : bool *  
    baseType : EdgeType *  
    graph : Graph -> EdgeType
```

Parameters

aTypeId

Type: [System.Int32](#)

The id to use for the new edge type

aTypeName

Type: [System.String](#)

A type name to use

tailType

Type: [VelocityGraph.VertexType](#)

Restrict tail vertex to a certain vertex type

headType

Type: [VelocityGraph.VertexType](#)

Restrict head vertex to a certain vertex type

bidirectional

Type: [System.Boolean](#)

Is this edge type bidirectional (going both ways)

baseType

Type: [VelocityGraph.EdgeType](#)

A base type can be specified

graph

Type: [VelocityGraph.Graph](#)

The owning graph

EdgeType.EdgeType Properties

The [EdgeType](#) type exposes the following members.

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------------|-----------------------------------------------------------------------------|
|  | Directed | Is Directed if edge type is not birectionalal |
|  | HeadType | Gets the Head VertexType of the edge (might not be set) |
|  | MyGraph | Graph for which this EdgeType belongs to |
|  | SubTypes | Sub types of this EdgeType |
|  | TailType | Gets the Tail VertexType of the edge (might not be set) |
|  | TypeId | Gets the id of the edge type |
|  | TypeName | Gets the name of the this edge type |
|  | Unrestricted | Is this edge type restricted to a certain head and tail vertex type? |

EdgeType.Directed Property

Is Directed if edge type is not birectionalal

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public bool Directed { get; }
```

VB

```
Public ReadOnly Property Directed As Boolean  
    Get
```

C++

```
public:  
property bool Directed {  
    bool get ();  
}
```

F#

```
member Directed : bool with get
```

Property Value

Type: [Boolean](#)

EdgeType.HeadType Property

Gets the Head VertexType of the edge (might not be set)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public VertexType HeadType { get; }
```

VB

```
Public ReadOnly Property HeadType As VertexType  
    Get
```

C++

```
public:  
property VertexType^ HeadType {  
    VertexType^ get ();  
}
```

F#

```
member HeadType : VertexType with get
```

Property Value

Type: [VertexType](#)

EdgeType.SubTypes Property

Sub types of this [EdgeType](#)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public List<EdgeType> SubTypes { get; }
```

VB

```
Public ReadOnly Property SubTypes As List(Of EdgeType)  
    Get
```

C++

```
public:  
property List<EdgeType^>^ SubTypes {  
    List<EdgeType^>^ get ();  
}
```

F#

```
member SubTypes : List<EdgeType> with get
```

Property Value

Type: [List\(EdgeType\)](#)

[EdgeType Class](#)

[VelocityGraph Namespace](#)

EdgeType.TailType Property

Gets the Tail VertexType of the edge (might not be set)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public VertexType TailType { get; }
```

VB

```
Public ReadOnly Property TailType As VertexType  
    Get
```

C++

```
public:  
property VertexType^ TailType {  
    VertexType^ get ();  
}
```

F#

```
member TailType : VertexType with get
```

Property Value

Type: [VertexType](#)

[VelocityGraph Namespace](#)

EdgeType.TypeId Property

Gets the id of the edge type

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public int TypeId { get; }
```

VB

```
Public ReadOnly Property TypeId As Integer  
    Get
```

C++

```
public:  
property int TypeId {  
    int get ();  
}
```

F#

```
member TypeId : int with get
```

Property Value

Type: [Int32](#)

[VelocityGraph Namespace](#)

EdgeType.TypeName Property

Gets the name of the this edge type

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public string TypeName { get; }
```

VB

```
Public ReadOnly Property TypeName As String  
    Get
```

C++

```
public:  
property String^ TypeName {  
    String^ get ();  
}
```

F#

```
member TypeName : string with get
```

Property Value

Type: [String](#)

See Also

[EdgeType Class](#)

[VelocityGraph Namespace](#)

EdgeType.Unrestricted Property

Is this edge type restricted to a certain head and tail vertex type?

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public bool Unrestricted { get; }
```

VB

```
Public ReadOnly Property Unrestricted As Boolean  
    Get
```

C++

```
public:  
property bool Unrestricted {  
    bool get ();  
}
```

F#

```
member Unrestricted : bool with get
```

Property Value

Type: [Boolean](#)

EdgeType.EdgeType Methods

The [EdgeType](#) type exposes the following members.

Methods

| Name | Description |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Compare | Compares two edge types by id |
|  CompareTo | Compares two EdgeType objects by id |
|  CountEdges | Get a count of existing edges of this type |
|  Equals | Compares two edge types by id |
|  FindProperty | Gets the property type given a property type name |
|  GetEdge(Int32, Boolean, Boolean) | Gets an edge given an edge id. Throws if no such edge exist. |
|  GetEdge(Int32, Vertex, Vertex) | Get an edge for a given id |
|  GetEdges | Enumerates all edges of this type |
|  GetHashCode | Get a hash code for an edge type based on type id |
|  GetPropertyKeys | Return all the keys associated with the edge type. |
|  GetPropertyTypes | Return all the property types associated with edge type. |
|  GetPropertyValue | Gets a property value given an edge id and a property type |
|  NewEdge | Create an edge between tail and head vertex |
|  NewEdgeX | Not yet implemented |
|  NewProperty | Creates a new Property. |
|  Remove | Removes this EdgeType from a graph. An exception is thrown if the EdgeType is in use. |
|  RemoveEdge | Removing an edge from this edge type |
|  SetPropertyValue(EdgeType, Int32, PropertyType, IComparable) | Sets an edge property given an edge id, property type and a value |
|  SetPropertyValue(VertexType, Int32, PropertyType, IComparable) | |
|  ToString | Displays class name plus object id (Overrides OptimizedPersistable.ToString() .) |
|  Unpersist | Removes an object from the persistent store and makes the object a transient object. It does not automatically make referenced objects unpersisted. Best way to do so is to override this virtual function in your own classes. (Overrides OptimizedPersistable.Unpersist(SessionBase) .) |

Extension Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------|
|  | ToStringDetails(SessionBase, Boolean) | Overloaded. Object details as a string (Defined by Utilities.) |
|  | ToStringDetails(Schema, TypeVersion, Boolean) | Overloaded. Currently only used by Database Manager (Defined by Utilities.) |

EdgeType.Compare Method

Compares two edge types by id

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static int Compare(  
    EdgeType aId,  
    EdgeType bId  
)
```

VB

```
Public Shared Function Compare (  
    aId As EdgeType,  
    bId As EdgeType  
) As Integer
```

C++

```
public:  
static int Compare(  
    EdgeType^ aId,  
    EdgeType^ bId  
)
```

F#

```
static member Compare :  
    aId : EdgeType *  
    bId : EdgeType -> int
```

Parameters

aId

Type: [VelocityGraph.EdgeType](#)

edge type 1

bId

Type: [VelocityGraph.EdgeType](#)

edge type 2

Return Value

Type: [Int32](#)

0 if edge types are equal, -1 if aId is less than bId; otherwise 1

[VelocityGraph Namespace](#)

EdgeType.CompareTo Method

Compares two EdgeType objects by id

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public int CompareTo(  
    EdgeType obj  
)
```

VB

```
Public Function CompareTo (  
    obj As EdgeType  
) As Integer
```

C++

```
public:  
virtual int CompareTo(  
    EdgeType^ obj  
) sealed
```

F#

```
abstract CompareTo :  
    obj : EdgeType -> int  
override CompareTo :  
    obj : EdgeType -> int
```

Parameters

obj

Type: [VelocityGraph.EdgeType](#)

The object to compare with

Return Value

Type: [Int32](#)

a negative number if less, 0 if equal or else a positive number

Implements

[IComparable\(T\).CompareTo\(T\)](#)

See Also

[EdgeType Class](#)

[VelocityGraph Namespace](#)

EdgeType.CountEdges Method

Get a count of existing edges of this type

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public long CountEdges ()
```

VB

```
Public Function CountEdges As Long
```

C++

```
public:  
long long CountEdges ()
```

F#

```
member CountEdges : unit -> int64
```

Return Value

Type: [Int64](#)

[Missing <returns> documentation for "M:VelocityGraph.EdgeType.CountEdges"]

EdgeType.Equals Method

Compares two edge types by id

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public bool Equals(  
    EdgeType x,  
    EdgeType y  
)
```

VB

```
Public Function Equals (  
    x As EdgeType,  
    y As EdgeType  
) As Boolean
```

C++

```
public:  
virtual bool Equals(  
    EdgeType^ x,  
    EdgeType^ y  
) sealed
```

F#

```
abstract Equals :  
    x : EdgeType *  
    y : EdgeType -> bool  
override Equals :  
    x : EdgeType *  
    y : EdgeType -> bool
```

Parameters

x

Type: [VelocityGraph.EdgeType](#)

edge type 1

y

Type: [VelocityGraph.EdgeType](#)

edge type 2

Return Value

Type: [Boolean](#)

true if the specified objects are equal; otherwise, false.

VelocityDB Class Library

Implements

EdgeType.FindProperty Method

Gets the property type given a property type name

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public PropertyType FindProperty(  
    string name,  
    bool doBaseType = true  
)
```

VB

```
Public Function FindProperty (  
    name As String,  
    Optional doBaseType As Boolean = true  
) As PropertyType
```

C++

```
public:  
PropertyType^ FindProperty(  
    String^ name,  
    bool doBaseType = true  
)
```

F#

```
member FindProperty :  
    name : string *  
    ?doBaseType : bool  
(* Defaults:  
    let _doBaseType = defaultArg doBaseType true  
)  
-> PropertyType
```

Parameters

name

Type: [System.String](#)

a property type name

doBaseType (Optional)

Type: [System.Boolean](#)

[Missing <param name="doBaseType"/> documentation for "M:VelocityGraph.EdgeType.FindProperty(System.String,System.Boolean)"]

VelocityDB Class Library

Return Value

Type: [PropertyType](#)

a looked up property type or null if no such property type exist

[EdgeType Class](#)

[VelocityGraph Namespace](#)

EdgeType.GetEdge Method (Int32, Boolean, Boolean)

Gets an edge given an edge id. Throws if no such edge exist.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Edge GetEdge(  
    int edgeId,  
    bool polymorphic = false,  
    bool errorIfNotFound = true  
)
```

VB

```
Public Function GetEdge (  
    edgeId As Integer,  
    Optional polymorphic As Boolean = false,  
    Optional errorIfNotFound As Boolean = true  
) As Edge
```

C++

```
public:  
Edge^ GetEdge(  
    int edgeId,  
    bool polymorphic = false,  
    bool errorIfNotFound = true  
)
```

F#

```
member GetEdge :  
    edgeId : int *  
    ?polymorphic : bool *  
    ?errorIfNotFound : bool  
(* Defaults:  
    let _polymorphic = defaultArg polymorphic false  
    let _errorIfNotFound = defaultArg errorIfNotFound true  
)  
-> Edge
```

Parameters

edgeId

Type: [System.Int32](#)

The id of the edge

polymorphic (Optional)

Type: [System.Boolean](#)

VelocityDB Class Library

If true and id isn't found in this EdgeType continue search into sub types

errorIfNotFound (Optional)

Type: [System.Boolean](#)

Indicate what to do if [Edge](#) does not exist

Return Value

Type: [Edge](#)

The edge with matching id if it exists

See Also

[EdgeType Class](#)

[GetEdge Overload](#)

[VelocityGraph Namespace](#)

EdgeType.GetEdge Method (Int32, Vertex, Vertex)

Get an edge for a given id

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Edge GetEdge(  
    int edgeId,  
    Vertex tailVertex,  
    Vertex headVertex  
)
```

VB

```
Public Function GetEdge (  
    edgeId As Integer,  
    tailVertex As Vertex,  
    headVertex As Vertex  
) As Edge
```

C++

```
public:  
Edge^ GetEdge(  
    int edgeId,  
    Vertex^ tailVertex,  
    Vertex^ headVertex  
)
```

F#

```
member GetEdge :  
    edgeId : int *  
    tailVertex : Vertex *  
    headVertex : Vertex -> Edge
```

Parameters

edgeId

Type: [System.Int32](#)

Id of edge

tailVertex

Type: [VelocityGraph.Vertex](#)

the tail vertex of the edge

headVertex

Type: [VelocityGraph.Vertex](#)

the head vertex of the edge

Return Value

Type: [Edge](#)

[Missing <returns> documentation for

"M:VelocityGraph.EdgeType.GetEdge(System.Int32,VelocityGraph.Vertex,VelocityGraph.Vertex)"]

[VelocityGraph Namespace](#)

EdgeType.GetEdges Method

Enumerates all edges of this type

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<Edge> GetEdges (  
    bool polymorphic = false  
)
```

VB

```
Public Function GetEdges (  
    Optional polymorphic As Boolean = false  
) As IEnumerable(Of Edge)
```

C++

```
public:  
IEnumerable<Edge^>^ GetEdges (  
    bool polymorphic = false  
)
```

F#

```
member GetEdges :  
    ?polymorphic : bool  
(* Defaults:  
    let_polymorphic = defaultArg polymorphic false  
*)  
-> IEnumerable<Edge>
```

Parameters

polymorphic (Optional)

Type: [System.Boolean](#)

If true, also include all edges of sub types

Return Value

Type: [IEnumerable\(Edge\)](#)

Enumeration of edges of this type

See Also

[EdgeType Class](#)

[VelocityGraph Namespace](#)

EdgeType.GetHashCode Method

Get a hash code for an edge type based on type id

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public int GetHashCode(  
    EdgeType t  
)
```

VB

```
Public Function GetHashCode (  
    t As EdgeType  
) As Integer
```

C++

```
public:  
virtual int GetHashCode(  
    EdgeType^ t  
) sealed
```

F#

```
abstract GetHashCode :  
    t : EdgeType -> int  
override GetHashCode :  
    t : EdgeType -> int
```

Parameters

t

Type: [VelocityGraph.EdgeType](#)

edge type to get hash code for

Return Value

Type: [Int32](#)

Hash code of an edge type

Implements

[IEqualityComparer\(T\).GetHashCode\(T\)](#)

See Also

[EdgeType Class](#)

[VelocityGraph Namespace](#)

EdgeType.GetPropertyKeys Method

Return all the keys associated with the edge type.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<string> GetPropertyKeys ()
```

VB

```
Public Function GetPropertyKeys As IEnumerable(Of String)
```

C++

```
public:  
IEnumerable<String^>^ GetPropertyKeys ()
```

F#

```
member GetPropertyKeys : unit -> IEnumerable<string>
```

Return Value

Type: [IEnumerable\(String\)](#)

the set of all string keys associated with the edge type

See Also

[EdgeType Class](#)

[VelocityGraph Namespace](#)

EdgeType.GetPropertyTypes Method

Return all the property types associated with edge type.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<PropertyType> GetPropertyTypes ()
```

VB

```
Public Function GetPropertyTypes As IEnumerable (Of PropertyType)
```

C++

```
public:  
IEnumerable<PropertyType^> GetPropertyTypes ()
```

F#

```
member GetPropertyTypes : unit -> IEnumerable<PropertyType>
```

Return Value

Type: [IEnumerable\(PropertyType\)](#)

the set of property types associated with the edge type

See Also

[EdgeType Class](#)

[VelocityGraph Namespace](#)

EdgeType.GetPropertyValue Method

Gets a property value given an edge id and a property type

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IComparable GetPropertyValue(  
    int elementId,  
    PropertyType property  
)
```

VB

```
Public Function GetPropertyValue (  
    elementId As Integer,  
    property As PropertyType  
) As IComparable
```

C++

```
public:  
IComparable^ GetPropertyValue(  
    int elementId,  
    PropertyType^ property  
)
```

F#

```
member GetPropertyValue :  
    elementId : int *  
    property : PropertyType -> IComparable
```

Parameters

elementId

Type: [System.Int32](#)

an edge id

property

Type: [VelocityGraph.PropertyType](#)

a property type

Return Value

Type: [IComparable](#)

a property value

See Also

[EdgeType Class](#)

VelocityDB Class Library

[VelocityGraph Namespace](#)

EdgeType.NewEdge Method

Create an edge between tail and head vertex

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Edge NewEdge(  
    Vertex tail,  
    Vertex head  
)
```

VB

```
Public Function NewEdge (  
    tail As Vertex,  
    head As Vertex  
) As Edge
```

C++

```
public:  
Edge^ NewEdge (  
    Vertex^ tail,  
    Vertex^ head  
)
```

F#

```
member NewEdge :  
    tail : Vertex *  
    head : Vertex -> Edge
```

Parameters

tail

Type: [VelocityGraph.Vertex](#)

selected tail vertex

head

Type: [VelocityGraph.Vertex](#)

selected head vertex

Return Value

Type: [Edge](#)

a new edge

See Also

[EdgeType Class](#)

[VelocityGraph Namespace](#)

EdgeType.NewEdgeX Method

Not yet implemented

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Edge NewEdgeX(  
    WeakReferenceList<PropertyType> propertyType,  
    PropertyType tailAttr,  
    Object tailV,  
    PropertyType headAttr,  
    Object headV,  
    SessionBase session  
)
```

VB

```
Public Function NewEdgeX (  
    propertyType As WeakReferenceList(Of PropertyType),  
    tailAttr As PropertyType,  
    tailV As Object,  
    headAttr As PropertyType,  
    headV As Object,  
    session As SessionBase  
) As Edge
```

C++

```
public:  
Edge^ NewEdgeX(  
    WeakReferenceList<PropertyType^>^ propertyType,  
    PropertyType^ tailAttr,  
    Object^ tailV,  
    PropertyType^ headAttr,  
    Object^ headV,  
    SessionBase^ session  
)
```

F#

```
member NewEdgeX :  
    propertyType : WeakReferenceList<PropertyType> *  
    tailAttr : PropertyType *  
    tailV : Object *  
    headAttr : PropertyType *  
    headV : Object *  
    session : SessionBase -> Edge
```

Parameters

propertyType

Type: [VelocityDb.Collection.WeakReferenceList\(PropertyType\)](#)

[Missing <param name="propertyType"/> documentation for "M:VelocityGraph.EdgeType.NewEdgeX(VelocityDb.Collection.WeakReferenceList{VelocityGraph.PropertyType},VelocityGraph.PropertyType,System.Object,VelocityGraph.PropertyType,System.Object,VelocityDb.Session.SessionBase)"]

tailAttr

Type: [VelocityGraph.PropertyType](#)

[Missing <param name="tailAttr"/> documentation for "M:VelocityGraph.EdgeType.NewEdgeX(VelocityDb.Collection.WeakReferenceList{VelocityGraph.PropertyType},VelocityGraph.PropertyType,System.Object,VelocityGraph.PropertyType,System.Object,VelocityDb.Session.SessionBase)"]

tailV

Type: [System.Object](#)

[Missing <param name="tailV"/> documentation for "M:VelocityGraph.EdgeType.NewEdgeX(VelocityDb.Collection.WeakReferenceList{VelocityGraph.PropertyType},VelocityGraph.PropertyType,System.Object,VelocityGraph.PropertyType,System.Object,VelocityDb.Session.SessionBase)"]

headAttr

Type: [VelocityGraph.PropertyType](#)

[Missing <param name="headAttr"/> documentation for "M:VelocityGraph.EdgeType.NewEdgeX(VelocityDb.Collection.WeakReferenceList{VelocityGraph.PropertyType},VelocityGraph.PropertyType,System.Object,VelocityGraph.PropertyType,System.Object,VelocityDb.Session.SessionBase)"]

headV

Type: [System.Object](#)

[Missing <param name="headV"/> documentation for "M:VelocityGraph.EdgeType.NewEdgeX(VelocityDb.Collection.WeakReferenceList{VelocityGraph.PropertyType},VelocityGraph.PropertyType,System.Object,VelocityGraph.PropertyType,System.Object,VelocityDb.Session.SessionBase)"]

session

Type: [VelocityDb.Session.SessionBase](#)

[Missing <param name="session"/> documentation for "M:VelocityGraph.EdgeType.NewEdgeX(VelocityDb.Collection.WeakReferenceList{VelocityGraph.PropertyType},VelocityGraph.PropertyType,System.Object,VelocityGraph.PropertyType,System.Object,VelocityDb.Session.SessionBase)"]

Return Value

Type: [Edge](#)

[Missing <returns> documentation for "M:VelocityGraph.EdgeType.NewEdgeX(VelocityDb.Collection.WeakReferenceList{VelocityGraph.Prop

ertyType},VelocityGraph.PropertyType,System.Object,VelocityGraph.PropertyType,System.Object,VelocityDb.Session.SessionBase)"]

[VelocityGraph Namespace](#)

EdgeType.NewProperty Method

Creates a new Property.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public PropertyType NewProperty(  
    string name,  
    DataType dt,  
    PropertyKind kind  
)
```

VB

```
Public Function NewProperty (  
    name As String,  
    dt As DataType,  
    kind As PropertyKind  
) As PropertyType
```

C++

```
public:  
PropertyType^ NewProperty(  
    String^ name,  
    DataType dt,  
    PropertyKind kind  
)
```

F#

```
member NewProperty :  
    name : string *  
    dt : DataType *  
    kind : PropertyKind -> PropertyType
```

Parameters

name

Type: [System.String](#)

Unique name for the new Property.

dt

Type: [VelocityGraph.DataType](#)

Data type for the new Property.

kind

Type: [VelocityGraph.PropertyKind](#)

Property kind.

VelocityDB Class Library

Return Value

Type: [PropertyType](#)

a Property.

Sets an edge property given an edge id, property type and a value

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void SetPropertyValue (
    EdgeType et,
    int elementId,
    PropertyType property,
    IComparable v
)
```

VB

```
Public Sub SetPropertyValue (
    et As EdgeType,
    elementId As Integer,
    property As PropertyType,
    v As IComparable
)
```

C++

```
public:
void SetPropertyValue (
    EdgeType^ et,
    int elementId,
    PropertyType^ property,
    IComparable^ v
)
```

F#

```
member SetPropertyValue :
    et : EdgeType *
    elementId : int *
    property : PropertyType *
    v : IComparable -> unit
```

Parameters

et

Type: [VelocityGraph.EdgeType](#)

[Missing <param name="et"/> documentation for

"M:VelocityGraph.EdgeType.SetPropertyValue(VelocityGraph.EdgeType,System.Int32,VelocityGraph.PropertyType,System.IComparable)"]

VelocityDB Class Library

EdgeType.ToString Method

Displays class name plus object id

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override string ToString()
```

VB

```
Public Overrides Function ToString As String
```

C++

```
public:  
virtual String^ ToString() override
```

F#

```
abstract ToString : unit -> string  
override ToString : unit -> string
```

Return Value

Type: [String](#)

A [String](#) containing class name and object id.

See Also

[EdgeType Class](#)

[VelocityGraph Namespace](#)

EdgeType.Unpersist Method

Removes an object from the persistent store and makes the object a transient object. It does not automatically make referenced objects unpersisted. Best way to do so is to override this virtual function in your own classes.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override void Unpersist(  
    SessionBase session  
)
```

VB

```
Public Overrides Sub Unpersist (  
    session As SessionBase  
)
```

C++

```
public:  
virtual void Unpersist(  
    SessionBase^ session  
) override
```

F#

```
abstract Unpersist :  
    session : SessionBase -> unit  
override Unpersist :  
    session : SessionBase -> unit
```

Parameters

session

Type: [VelocityDb.Session.SessionBase](#)

The managing session

Implements

[IOptimizedPersistable.Unpersist\(SessionBase\)](#)

See Also

[EdgeType Class](#)

[VelocityGraph Namespace](#)

Element Class

Base class for Edge and Vertex

Inheritance Hierarchy

[System.Object](#)

[VelocityGraph.Frontenac.Blueprints.DictionaryElement](#)

VelocityGraph.Element

[VelocityGraph.Edge](#)

[VelocityGraph.Vertex](#)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public abstract class Element : DictionaryElement
```

VB

```
Public MustInherit Class Element  
    Inherits DictionaryElement
```

C++

```
public ref class Element abstract : public DictionaryElement
```

F#

```
[<AbstractClassAttribute>]  
type Element =  
    class  
        inherit DictionaryElement  
    end
```

The **Element** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------|------------------------------------------------------------------------|
|  | GetHashCode | Use id as hash code (Overrides Object.GetHashCode() .) |

See Also

[VelocityGraph Namespace](#)

Element.Element Methods

The [Element](#) type exposes the following members.

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|------------------------------------------------------------------------|
|  | GetHashCode | Use id as hash code (Overrides Object.GetHashCode() .) |

[Element Class](#)

[VelocityGraph Namespace](#)

Element.GetHashCode Method

Use id as hash code

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override int GetHashCode()
```

VB

```
Public Overrides Function GetHashCode As Integer
```

C++

```
public:  
virtual int GetHashCode() override
```

F#

```
abstract GetHashCode : unit -> int  
override GetHashCode : unit -> int
```

Return Value

Type: [Int32](#)

The hash code given by id

See Also

[VelocityGraph Namespace](#)

Graph Class

Graph is the root object of a graph. Most graph api is on this class but useful api also exist on [VertexType](#) and [EdgeType](#).

Inheritance Hierarchy

[System.Object](#)

[VelocityDb.OptimizedPersistable](#)

VelocityGraph.Graph

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
[SerializableAttribute]
public class Graph : OptimizedPersistable, IGraph
```

VB

```
<SerializableAttribute>
Public Class Graph
    Inherits OptimizedPersistable
    Implements IGraph
```

C++

```
[SerializableAttribute]
public ref class Graph : public OptimizedPersistable,
    IGraph
```

F#

```
[<SerializableAttribute>]
type Graph =
    class
        inherit OptimizedPersistable
        interface IGraph
    end
```

The **Graph** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------|----------------------------|
|  | Graph | Creates a new Graph |

Properties

| Name | Description |
|----------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|
|  Features | Returns the features of the underlying graph. |
|  ObjectsPerPage | Place this type of object on its own page (Overrides OptimizedPersistable.ObjectsPerPage.) |
|  VertexIdSetPerType | <code>true</code> if using a vertex id set per type. Decided by constructor parameter when creating a Graph |

Methods

| Name | Description |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddEdge | Add an edge to the graph. The added edges requires a recommended identifier, a tail vertex, an head vertex, and a label. Like adding a vertex, the provided object identifier may be ignored by the implementation. |
|  AddVertex() | Create a new vertex (of VertexType "default"), add it to the graph, and return the newly created vertex. |
|  AddVertex(Object) | Create a new vertex (of VertexType "default"), add it to the graph, and return the newly created vertex. |
|  Clear | Removes all edges and vertices from the graph. |
|  CombineIntersection | Combines to sets of edges by intersection |
|  ContainsVertex | Returns a value indicating whether a Vertex exists for the specified vertex id. |
|  CountEdges | Returns a count of all edges in this graph |
|  CountVertices | Get a count of all vertices in this graph |
|  Edges | Enumerates all the edges of the given type between two given nodes (tail and head). |
|  ExportToGraphJson(Stream) | Write the data in a Graph to a GraphJson JSON OutputStream. |
|  ExportToGraphJson(String) | Write the data in a Graph to a GraphJson JSON OutputStream. |
|  ExportToGraphJson(Stream, GraphJsonSettings) | Write the data in a Graph to a GraphJson JSON OutputStream. |
|  ExportToGraphJson(String, GraphJsonSettings) | Write the data in a Graph to a GraphJson JSON OutputStream. |
|  ExportToGraphSon(Stream, IEnumerable(String), IEnumerable(String), GraphSonMode) | Write the data in a Graph to a GraphSon JSON OutputStream. |
|  ExportToGraphSon(String, IEnumerable(String), | Write the data in a Graph to a GraphSon JSON OutputStream. |

| | | |
|---|-------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| | IEnumerable(String), GraphSonMode) | |
| ⇒ | FindEdgeType | Finds the type id associated with a particular edge type. Lookup by name. |
| ⇒ | FindEdgeTypes | Get an array of all edge types in this graph |
| ⇒ | FindVertex | Finds vertex having the given value for the given property. |
| ⇒ | FindVertexProperty | Finds a PropertyType of VertexType . |
| ⇒ | FindVertexType | Finds the type id associated with a particular vertex type. Lookup by name. |
| ⇒ | FindVertexTypes | Get an array of all vertex types in this graph |
| ⇒ | GetEdge | Return the edge referenced by the provided object identifier. If no edge is referenced by that identifier, then return null. |
| ⇒ | GetEdges() | Return an iterable to all the edges in the graph. |
| ⇒ | GetEdges(String, Object) | Return an iterable to all the edges in the graph that have a particular key/value property. |
| ⇒ | GetEdges(T)(String, T) | Return an iterable to all the edges in the graph that have a particular key/value property. |
| ⇒ | GetEdgeType | Get a EdgeType associated with an Edge id |
| ⇒ | GetValues | Enumerates all the values for the given vertex/edge property |
| ⇒ | GetVertex(Int32) | Look up a Vertex |
| ⇒ | GetVertex(Object) | Return the vertex referenced by the provided object identifier. If no vertex is referenced by that identifier, then return null. |
| ⇒ | GetVertexType | Given a Vertex id, returns the corresponding Vertex . |
| ⇒ | GetVertices() | Return an iterable to all the vertices in the graph. |
| ⇒ | GetVertices(String, Object) | Return an iterable to all the vertices in the graph that have a particular key/value property. |
| ⇒ | ImportGraphJson(String) | Input the GraphJson JSON stream data into the graph. In practice, usually the provided graph is empty. |
| ⇒ | ImportGraphJson(Stream, Int32) | Input the GraphJson JSON stream data into the graph. In practice, usually the provided graph is empty. |
| ⇒ | ImportGraphSon(String) | Input the GraphSon JSON stream data into the graph. In practice, usually the provided graph is empty. |
| ⇒ | ImportGraphSon(Stream, Int32) | Input the GraphSon JSON stream data into the graph. In practice, usually the provided graph is empty. |
| ⇒ | NewEdge(EdgeType, Vertex, Vertex) | Creates a new edge instance. |
| ⇒ | NewEdge(EdgeType, PropertyType, Object, PropertyType, Object) | Creates a new edge instance. The tail of the edge will be any node having the given tailV Value for the given tailAttr Property |

| | | |
|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | identifier, and the head of the edge will be any node having the given headV Value for the given headAttr Property identifier. |
|  | NewEdgeProperty | Creates a new Property. |
|  | NewEdgeType(String, Boolean, EdgeType) | Creates a new edge type. |
|  | NewEdgeType(String, Boolean, VertexType, VertexType, EdgeType) | Creates a new edge type. |
|  | NewVertex | Creates a new node instance. |
|  | NewVertexProperty | Creates a new Property. |
|  | NewVertexType | Creates a new node type. |
|  | Open | Opens a graph |
|  | | |
|  | Persist | Persists this object. Override in your subclasses when you want fields of your class to be persisted in some special way. (Overrides OptimizedPersistable.Persist(Placement, SessionBase, Boolean, Boolean, Queue(IOptimizedPersistable)) .) |
|  | Query | Generate a query object that can be used to fine tune which edges/vertices are retrieved from the graph. |
|  | RemoveEdge | Remove the provided edge from the graph. |
|  | RemovePropertyType | Removes a property type except if any vertex or edge is using it |
|  | RemoveVertex | Remove the provided vertex from the graph. Upon removing the vertex, all the edges by which the vertex is connected must be removed as well. |
|  | RemoveVertexType | Removes a VertexType from this graph. An exception is thrown if the VertexType is in use. |
|  | Select(PropertyType, Func(IComparable, IComparable, Boolean), IComparable) | Enumerates all elements satisfying the given condition for the given property and value |
|  | Select(PropertyType, Func(IComparable, IComparable, IComparable, Boolean), IComparable, IComparable) | numerates all elements satisfying the given condition for the given property and value range |
|  | Shutdown | A shutdown function is required to properly close the graph. This is important for implementations that utilize disk-based serializations. |
|  | ToString | Displays class name plus object id (Overrides OptimizedPersistable.ToString() .) |
|  | Traverse | Selects all neighbor Vertices from or to each of the node OID in the given collection and for the given edge type. |

| | |
|-------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Unpersist | Removes an object from the persistent store and makes the object a transient object. It does not automatically make referenced objects unpersisted. Best way to do so is to override this virtual function in your own classes. (Overrides OptimizedPersistable.Unpersist(SessionBase) .) |
|-------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Extension Methods

| Name | Description |
|---------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  CreateTinkerGraph | (Defined by GraphHelpers .) |
|  GraphString | (Defined by StringFactory .) |
|  LoadGml | (Defined by GraphHelpers .) |
|  LoadGraphml | (Defined by GraphHelpers .) |
|  LoadGraphson | (Defined by GraphHelpers .) |
|  ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers .) |
|  SaveDotNet | (Defined by GraphHelpers .) |
|  SaveGml | (Defined by GraphHelpers .) |
|  SaveGraphml | (Defined by GraphHelpers .) |
|  SaveGraphson | (Defined by GraphHelpers .) |
|  ToStringDetails(SessionBase, Boolean) | Overloaded. Object details as a string (Defined by Utilities .) |

VelocityDB Class Library

See Also

[VelocityGraph Namespace](#)

Graph Constructor

Creates a new [Graph](#)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Graph(  
    SessionBase session,  
    bool vertexIdSetPerVertexType = true  
)
```

VB

```
Public Sub New (  
    session As SessionBase,  
    Optional vertexIdSetPerVertexType As Boolean = true  
)
```

C++

```
public:  
Graph(  
    SessionBase^ session,  
    bool vertexIdSetPerVertexType = true  
)
```

F#

```
new :  
    session : SessionBase *  
    ?vertexIdSetPerVertexType : bool  
(* Defaults:  
    let _vertexIdSetPerVertexType = defaultArg vertexIdSetPerVertexType  
true  
*)  
-> Graph
```

Parameters

session

Type: [VelocityDb.Session.SessionBase](#)

The active session

vertexIdSetPerVertexType (Optional)

Type: [System.Boolean](#)

Set to *false* (False in Visual Basic) if you want graph wide unique [Vertex](#) ids, by default *true* (True in Visual Basic) each [VertexType](#) maintains its own set of [Vertex](#) ids

Graph.Graph Properties

The [Graph](#) type exposes the following members.

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------------------|-------------------------------------------------------------------------------------------------------------------|
|  | Features | Returns the features of the underlying graph. |
|  | ObjectsPerPage | Place this type of object on its own page (Overrides OptimizedPersistable.ObjectsPerPage.) |
|  | VertexIdSetPerType | true if using a vertex id set per type. Decided by constructor parameter when creating a Graph |

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.Features Property

Returns the features of the underlying graph.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual Features Features { get; }
```

VB

```
Public Overridable ReadOnly Property Features As Features  
    Get
```

C++

```
public:  
virtual property Features^ Features {  
    Features^ get ();  
}
```

F#

```
abstract Features : Features with get  
override Features : Features with get
```

Property Value

Type: [Features](#)

Implements

[IGraph.Features](#)

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.ObjectsPerPage Property

Place this type of object on its own page

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override ushort ObjectsPerPage { get; }
```

VB

```
Public Overrides ReadOnly Property ObjectsPerPage As UShort  
    Get
```

C++

```
public:  
virtual property unsigned short ObjectsPerPage {  
    unsigned short get () override;  
}
```

F#

```
abstract ObjectsPerPage : uint16 with get  
override ObjectsPerPage : uint16 with get
```

Return Value

Type: [UInt16](#)

The default maximum number of objects per page

Implements

[IOptimizedPersistable.ObjectsPerPage](#)

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.VertexIdSetPerType Property

true

if using a vertex id set per type. Decided by constructor parameter when creating a [Graph](#)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public bool VertexIdSetPerType { get; }
```

VB

```
Public ReadOnly Property VertexIdSetPerType As Boolean  
    Get
```

C++

```
public:  
property bool VertexIdSetPerType {  
    bool get ();  
}
```

F#

```
member VertexIdSetPerType : bool with get
```

Property Value

Type: [Boolean](#)

Graph.Graph Methods

The [Graph](#) type exposes the following members.

Methods

| Name | Description |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddEdge | Add an edge to the graph. The added edges requires a recommended identifier, a tail vertex, an head vertex, and a label. Like adding a vertex, the provided object identifier may be ignored by the implementation. |
|  AddVertex() | Create a new vertex (of VertexType "default"), add it to the graph, and return the newly created vertex. |
|  AddVertex(Object) | Create a new vertex (of VertexType "default"), add it to the graph, and return the newly created vertex. |
|  Clear | Removes all edges and vertices from the graph. |
|  CombineIntersection | Combines to sets of edges by intersection |
|  ContainsVertex | Returns a value indicating whether a Vertex exists for the specified vertex id. |
|  CountEdges | Returns a count of all edges in this graph |
|  CountVertices | Get a count of all vertices in this graph |
|  Edges | Enumerates all the edges of the given type between two given nodes (tail and head). |
|  ExportToGraphJson(Stream) | Write the data in a Graph to a GraphJson JSON OutputStream. |
|  ExportToGraphJson(String) | Write the data in a Graph to a GraphJson JSON OutputStream. |
|  ExportToGraphJson(Stream, GraphJsonSettings) | Write the data in a Graph to a GraphJson JSON OutputStream. |
|  ExportToGraphJson(String, GraphJsonSettings) | Write the data in a Graph to a GraphJson JSON OutputStream. |
|  ExportToGraphSon(Stream, IEnumerable(String), IEnumerable(String), GraphSonMode) | Write the data in a Graph to a GraphSon JSON OutputStream. |
|  ExportToGraphSon(String, IEnumerable(String), IEnumerable(String), GraphSonMode) | Write the data in a Graph to a GraphSon JSON OutputStream. |
|  FindEdgeType | Finds the type id associated with a particular edge type. Lookup by name. |
|  FindEdgeTypes | Get an array of all edge types in this graph |
|  FindVertex | Finds vertex having the given value for the given property. |

| | |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  FindVertexProperty | Finds a PropertyType of VertexType . |
|  FindVertexType | Finds the type id associated with a particular vertexe type. Lookup by name. |
|  FindVertexTypes | Get an array of all vertex types in this graph |
|  GetEdge | Return the edge referenced by the provided object identifier. If no edge is referenced by that identifier, then return null. |
|  GetEdges() | Return an iterable to all the edges in the graph. |
|  GetEdges(String, Object) | Return an iterable to all the edges in the graph that have a particular key/value property. |
|  GetEdges(T)(String, T) | Return an iterable to all the edges in the graph that have a particular key/value property. |
|  GetEdgeType | Get a EdgeType associated with an Edge id |
|  GetValues | Enumerates all the values for the given vertex/edge property |
|  GetVertex(Int32) | Look up a Vertex |
|  GetVertex(Object) | Return the vertex referenced by the provided object identifier. If no vertex is referenced by that identifier, then return null. |
|  GetVertexType | Given a Vertex id, returns the corresponding Vertex . |
|  GetVertices() | Return an iterable to all the vertices in the graph. |
|  GetVertices(String, Object) | Return an iterable to all the vertices in the graph that have a particular key/value property. |
|  ImportGraphJson(String) | Input the GraphJson JSON stream data into the graph. In practice, usually the provided graph is empty. |
|  ImportGraphJson(Stream, Int32) | Input the GrapJson JSON stream data into the graph. In practice, usually the provided graph is empty. |
|  ImportGraphSon(String) | Input the GraphSon JSON stream data into the graph. In practice, usually the provided graph is empty. |
|  ImportGraphSon(Stream, Int32) | Input the GraphSon JSON stream data into the graph. In practice, usually the provided graph is empty. |
|  NewEdge(EdgeType, Vertex, Vertex) | Creates a new edge instance. |
|  NewEdge(EdgeType, PropertyType, Object, PropertyType, Object) | Creates a new edge instance. The tail of the edge will be any node having the given tailV Value for the given tailAttr Property identifier, and the head of the edge will be any node having the given headV Value for the given headAttr Property identifier. |
|  NewEdgeProperty | Creates a new Property. |
|  NewEdgeType(String, Boolean, EdgeType) | Creates a new edge type. |

| | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  NewEdgeType(String, Boolean, VertexType, VertexType, EdgeType) | Creates a new edge type. |
|  NewVertex | Creates a new node instance. |
|  NewVertexProperty | Creates a new Property. |
|  NewVertexType | Creates a new node type. |
|  Open | Opens a graph |
|  Persist | Persists this object. Override in your subclasses when you want fields of your class to be persisted in some special way. (Overrides OptimizedPersistable.Persist(Placement, SessionBase, Boolean, Boolean, Queue(IOptimizedPersistable)) .) |
|  Query | Generate a query object that can be used to fine tune which edges/vertices are retrieved from the graph. |
|  RemoveEdge | Remove the provided edge from the graph. |
|  RemovePropertyType | Removes a property type except if any vertex or edge is using it |
|  RemoveVertex | Remove the provided vertex from the graph. Upon removing the vertex, all the edges by which the vertex is connected must be removed as well. |
|  RemoveVertexType | Removes a VertexType from this graph. An exception is thrown if the VertexType is in use. |
|  Select(PropertyType, Func(IComparable, IComparable, Boolean), IComparable) | Enumerates all elements satisfying the given condition for the given property and value |
|  Select(PropertyType, Func(IComparable, IComparable, IComparable, Boolean), IComparable, IComparable) | numerates all elements satisfying the given condition for the given property and value range |
|  Shutdown | A shutdown function is required to properly close the graph. This is important for implementations that utilize disk-based serializations. |
|  ToString | Displays class name plus object id (Overrides OptimizedPersistable.ToString() .) |
|  Traverse | Selects all neighbor Vertices from or to each of the node OID in the given collection and for the given edge type. |
|  Unpersist | Removes an object from the persistent store and makes the object a transient object. It does not automatically make referenced objects unpersisted. Best way to do so is to override this virtual function in your own classes. (Overrides OptimizedPersistable.Unpersist(SessionBase) .) |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers.) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers.) |
|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers.) |
|  | CreateTinkerGraph | (Defined by GraphHelpers.) |
|  | GraphString | (Defined by StringFactory.) |
|  | LoadGml | (Defined by GraphHelpers.) |
|  | LoadGraphml | (Defined by GraphHelpers.) |
|  | LoadGraphson | (Defined by GraphHelpers.) |
|  | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |
|  | SaveDotNet | (Defined by GraphHelpers.) |
|  | SaveGml | (Defined by GraphHelpers.) |
|  | SaveGraphml | (Defined by GraphHelpers.) |
|  | SaveGraphson | (Defined by GraphHelpers.) |
|  | ToStringDetails(SessionBase, Boolean) | Overloaded. Object details as a string (Defined by Utilities.) |
|  | ToStringDetails(Schema, TypeVersion, Boolean) | Overloaded. Currently only used by Database Manager (Defined by Utilities.) |

Graph.AddEdge Method

Add an edge to the graph. The added edges requires a recommended identifier, a tail vertex, an head vertex, and a label. Like adding a vertex, the provided object identifier may be ignored by the implementation.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual IEdge AddEdge (
    Object id,
    IVertex outVertex,
    IVertex inVertex,
    string label
)
```

VB

```
Public Overridable Function AddEdge (
    id As Object,
    outVertex As IVertex,
    inVertex As IVertex,
    label As String
) As IEdge
```

C++

```
public:
virtual IEdge^ AddEdge (
    Object^ id,
    IVertex^ outVertex,
    IVertex^ inVertex,
    String^ label
)
```

F#

```
abstract AddEdge :
    id : Object *
    outVertex : IVertex *
    inVertex : IVertex *
    label : string -> IEdge
override AddEdge :
    id : Object *
    outVertex : IVertex *
    inVertex : IVertex *
    label : string -> IEdge
```

Parameters

id

VelocityDB Class Library

Type: [System.Object](#)

the recommended object identifier

outVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

the vertex on the tail of the edge

inVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

the vertex on the head of the edge

label

Type: [System.String](#)

the label associated with the edge

Return Value

Type: [IEdge](#)

the newly created edge

Implements

[IGraph.AddEdge\(Object, IVertex, IVertex, String\)](#)

See Also

[Graph Class](#)

Graph.AddVertex Method

Create a new vertex (of VertexType "default"), add it to the graph, and return the newly created vertex.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual Vertex AddVertex()
```

VB

```
Public Overridable Function AddVertex As Vertex
```

C++

```
public:  
virtual Vertex^ AddVertex()
```

F#

```
abstract AddVertex : unit -> Vertex  
override AddVertex : unit -> Vertex
```

Return Value

Type: [Vertex](#)

the newly created vertex

See Also

[AddVertex Overload](#)

[VelocityGraph Namespace](#)

Graph.AddVertex Method (Object)

Create a new vertex (of VertexType "default"), add it to the graph, and return the newly created vertex.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual IVertex AddVertex(  
    Object id  
)
```

VB

```
Public Overridable Function AddVertex (  
    id As Object  
) As IVertex
```

C++

```
public:  
virtual IVertex^ AddVertex(  
    Object^ id  
)
```

F#

```
abstract AddVertex :  
    id : Object -> IVertex  
override AddVertex :  
    id : Object -> IVertex
```

Parameters

id

Type: [System.Object](#)

the recommended object identifier

Return Value

Type: [IVertex](#)

the newly created vertex

Implements

[IGraph.AddVertex\(Object\)](#)

See Also

[Graph Class](#)

[AddVertex Overload](#)

[VelocityGraph Namespace](#)

Graph.Clear Method

Removes all edges and vertices from the graph.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void Clear ()
```

VB

```
Public Sub Clear
```

C++

```
public:  
void Clear ()
```

F#

```
member Clear : unit -> unit
```

[VelocityGraph Namespace](#)

Graph.CombineIntersection Method

Combines to sets of edges by intersection

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static HashSet<Edge> CombineIntersection(  
    HashSet<Edge> objs1,  
    HashSet<Edge> objs2  
)
```

VB

```
Public Shared Function CombineIntersection (  
    objs1 As HashSet(Of Edge),  
    objs2 As HashSet(Of Edge)  
) As HashSet(Of Edge)
```

C++

```
public:  
static HashSet<Edge^>^ CombineIntersection(  
    HashSet<Edge^>^ objs1,  
    HashSet<Edge^>^ objs2  
)
```

F#

```
static member CombineIntersection :  
    objs1 : HashSet<Edge> *  
    objs2 : HashSet<Edge> -> HashSet<Edge>
```

Parameters

objs1

Type: [System.Collections.Generic.HashSet\(Edge\)](#)

first set of edges

objs2

Type: [System.Collections.Generic.HashSet\(Edge\)](#)

second set of edges

Return Value

Type: [HashSet\(Edge\)](#)

Intersection of sets

See Also

[Graph Class](#)

VelocityDB Class Library

[VelocityGraph Namespace](#)

Graph.ContainsVertex Method

Returns a value indicating whether a Vertex exists for the specified vertex id.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public bool ContainsVertex(  
    int vertexId  
)
```

VB

```
Public Function ContainsVertex (  
    vertexId As Integer  
) As Boolean
```

C++

```
public:  
bool ContainsVertex(  
    int vertexId  
)
```

F#

```
member ContainsVertex :  
    vertexId : int -> bool
```

Parameters

vertexId

Type: [System.Int32](#)

A Vertex id

Return Value

Type: [Boolean](#)

Returns `true` (`True` in Visual Basic) if a Vertex exist with specified *vertexId* is found in this [Graph](#); otherwise, `false` (`False` in Visual Basic).

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.CountEdges Method

Returns a count of all edges in this graph

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public long CountEdges ()
```

VB

```
Public Function CountEdges As Long
```

C++

```
public:  
long long CountEdges ()
```

F#

```
member CountEdges : unit -> int64
```

Return Value

Type: [Int64](#)

the total count of edges in this graph

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.CountVertices Method

Get a count of all vertices in this graph

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public long CountVertices ()
```

VB

```
Public Function CountVertices As Long
```

C++

```
public:  
long long CountVertices ()
```

F#

```
member CountVertices : unit -> int64
```

Return Value

Type: [Int64](#)

count of vertices

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.Edges Method

Enumerates all the edges of the given type between two given nodes (tail and head).

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IEdge> Edges (  
    EdgeType etype,  
    Vertex tail,  
    Vertex head  
)
```

VB

```
Public Function Edges (  
    etype As EdgeType,  
    tail As Vertex,  
    head As Vertex  
) As IEnumerable(Of IEdge)
```

C++

```
public:  
IEnumerable<IEdge^> Edges (  
    EdgeType^ etype,  
    Vertex^ tail,  
    Vertex^ head  
)
```

F#

```
member Edges :  
    etype : EdgeType *  
    tail : Vertex *  
    head : Vertex -> IEnumerable<IEdge>
```

Parameters

etype

Type: [VelocityGraph.EdgeType](#)

Type of Edge

tail

Type: [VelocityGraph.Vertex](#)

Outgoing Vertex

head

Type: [VelocityGraph.Vertex](#)

Incoming Vertex

VelocityDB Class Library

Return Value

Type: [IEnumerable\(IEdge\)](#)

Enumeration of Edge

Graph.ExportToJson Method

Overload List

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------------------------------|-------------------------------------------------------------|
|  | ExportToJson(Stream) | Write the data in a Graph to a GraphJson JSON OutputStream. |
|  | ExportToJson(String) | Write the data in a Graph to a GraphJson JSON OutputStream. |
|  | ExportToJson(Stream, GraphJsonSettings) | Write the data in a Graph to a GraphJson JSON OutputStream. |
|  | ExportToJson(String, GraphJsonSettings) | Write the data in a Graph to a GraphJson JSON OutputStream. |

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.ExportToGraphJson Method (Stream)

Write the data in a Graph to a GraphJson JSON OutputStream.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void ExportToGraphJson (  
    Stream jsonOutputStream  
)
```

VB

```
Public Sub ExportToGraphJson (  
    jsonOutputStream As Stream  
)
```

C++

```
public:  
void ExportToGraphJson (  
    Stream^ jsonOutputStream  
)
```

F#

```
member ExportToGraphJson :  
    jsonOutputStream : Stream -> unit
```

Parameters

jsonOutputStream

Type: [System.IO.Stream](#)

the OutputStream to write to

See Also

[Graph Class](#)

[ExportToGraphJson Overload](#)

[VelocityGraph Namespace](#)

Graph.ExportToJson Method (String)

Write the data in a Graph to a GraphJson JSON OutputStream.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

```
C#  
public void ExportToJson(  
    string filename  
)
```

```
VB  
Public Sub ExportToJson (  
    filename As String  
)
```

```
C++  
public:  
void ExportToJson(  
    String^ filename  
)
```

```
F#  
member ExportToJson :  
    filename : string -> unit
```

Parameters

filename

Type: [System.String](#)

the JSON file to write the Graph data to

See Also

[Graph Class](#)

[ExportToJson Overload](#)

[VelocityGraph Namespace](#)

Graph.ExportToGraphJson Method (Stream, GraphJsonSettings)

Write the data in a Graph to a GraphJson JSON OutputStream.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void ExportToGraphJson(  
    Stream jsonOutputStream,  
    GraphJsonSettings settings  
)
```

VB

```
Public Sub ExportToGraphJson (  
    jsonOutputStream As Stream,  
    settings As GraphJsonSettings  
)
```

C++

```
public:  
void ExportToGraphJson (  
    Stream^ jsonOutputStream,  
    GraphJsonSettings^ settings  
)
```

F#

```
member ExportToGraphJson :  
    jsonOutputStream : Stream *  
    settings : GraphJsonSettings -> unit
```

Parameters

jsonOutputStream

Type: [System.IO.Stream](#)

the OutputStream to write to

settings

Type: [VelocityGraph.GraphJsonSettings](#)

Contains field names that the writer will use to map to BluePrints

See Also

[Graph Class](#)

[ExportToGraphJson Overload](#)

[VelocityGraph Namespace](#)

Graph.ExportToGraphJson Method (String, GraphJsonSettings)

Write the data in a Graph to a GraphJson JSON OutputStream.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void ExportToGraphJson(  
    string filename,  
    GraphJsonSettings settings  
)
```

VB

```
Public Sub ExportToGraphJson (  
    filename As String,  
    settings As GraphJsonSettings  
)
```

C++

```
public:  
void ExportToGraphJson(  
    String^ filename,  
    GraphJsonSettings^ settings  
)
```

F#

```
member ExportToGraphJson :  
    filename : string *  
    settings : GraphJsonSettings -> unit
```

Parameters

filename

Type: [System.String](#)

the JSON file to write the Graph data to

settings

Type: [VelocityGraph.GraphJsonSettings](#)

Contains field names that the writer will use to map to BluePrints

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.ExportToGraphSon Method (Stream, IEnumerable(String), IEnumerable(String), GraphSonMode)

Write the data in a Graph to a GraphSon JSON OutputStream.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void ExportToGraphSon (
    Stream jsonOutputStream,
    IEnumerable<string> vertexPropertyKeys = null,
    IEnumerable<string> edgePropertyKeys = null,
    GraphSonMode mode = GraphSonMode.NORMAL
)
```

VB

```
Public Sub ExportToGraphSon (
    jsonOutputStream As Stream,
    Optional vertexPropertyKeys As IEnumerable(Of String) = Nothing,
    Optional edgePropertyKeys As IEnumerable(Of String) = Nothing,
    Optional mode As GraphSonMode = GraphSonMode.NORMAL
)
```

C++

```
public:
void ExportToGraphSon (
    Stream^ jsonOutputStream,
    IEnumerable<String^>^ vertexPropertyKeys = nullptr,
    IEnumerable<String^>^ edgePropertyKeys = nullptr,
    GraphSonMode mode = GraphSonMode::NORMAL
)
```

F#

```
member ExportToGraphSon :
    jsonOutputStream : Stream *
    ?vertexPropertyKeys : IEnumerable<string> *
    ?edgePropertyKeys : IEnumerable<string> *
    ?mode : GraphSonMode
(* Defaults:
    let _vertexPropertyKeys = defaultArg vertexPropertyKeys null
    let _edgePropertyKeys = defaultArg edgePropertyKeys null
    let _mode = defaultArg mode GraphSonMode.NORMAL
*)
-> unit
```

VelocityDB Class Library

Parameters

jsonOutputStream

Type: [System.IO.Stream](#)

the JSON OutputStream to write the Graph data to

vertexPropertyKeys (Optional)

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

the keys of the vertex elements to write to JSON

edgePropertyKeys (Optional)

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

the keys of the edge elements to write to JSON

mode (Optional)

Type: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonMode](#)

determines the format of the GraphSON

See Also

[Graph Class](#)

[ExportToGraphSon Overload](#)

[VelocityGraph Namespace](#)

Graph.ExportToGraphSon Method (String, IEnumerable(String), IEnumerable(String), GraphSonMode)

Write the data in a Graph to a GraphSon JSON OutputStream.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void ExportToGraphSon (
    string filename,
    IEnumerable<string> vertexPropertyKeys = null,
    IEnumerable<string> edgePropertyKeys = null,
    GraphSonMode mode = GraphSonMode.NORMAL
)
```

VB

```
Public Sub ExportToGraphSon (
    filename As String,
    Optional vertexPropertyKeys As IEnumerable(Of String) = Nothing,
    Optional edgePropertyKeys As IEnumerable(Of String) = Nothing,
    Optional mode As GraphSonMode = GraphSonMode.NORMAL
)
```

C++

```
public:
void ExportToGraphSon (
    String^ filename,
    IEnumerable<String^>^ vertexPropertyKeys = nullptr,
    IEnumerable<String^>^ edgePropertyKeys = nullptr,
    GraphSonMode mode = GraphSonMode::NORMAL
)
```

F#

```
member ExportToGraphSon :
    filename : string *
    ?vertexPropertyKeys : IEnumerable<string> *
    ?edgePropertyKeys : IEnumerable<string> *
    ?mode : GraphSonMode
(* Defaults:
    let _vertexPropertyKeys = defaultArg vertexPropertyKeys null
    let _edgePropertyKeys = defaultArg edgePropertyKeys null
    let _mode = defaultArg mode GraphSonMode.NORMAL
*)
-> unit
```

VelocityDB Class Library

Parameters

filename

Type: [System.String](#)

the JSON file to write the Graph data to

vertexPropertyKeys (Optional)

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

the keys of the vertex elements to write to JSON

edgePropertyKeys (Optional)

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

the keys of the edge elements to write to JSON

mode (Optional)

Type: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonMode](#)

determines the format of the GraphSON

Graph.FindEdgeType Method

Finds the type id associated with a particular edge type. Lookup by name.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public EdgeType FindEdgeType(  
    string name  
)
```

VB

```
Public Function FindEdgeType (  
    name As String  
) As EdgeType
```

C++

```
public:  
EdgeType^ FindEdgeType (  
    String^ name  
)
```

F#

```
member FindEdgeType :  
    name : string -> EdgeType
```

Parameters

name

Type: [System.String](#)

The name of the edge/node type being looked up

Return Value

Type: [EdgeType](#)

A node/edge type id or -1 if not found.

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.FindEdgeTypes Method

Get an array of all edge types in this graph

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<EdgeType> FindEdgeTypes ()
```

VB

```
Public Function FindEdgeTypes As IEnumerable (Of EdgeType)
```

C++

```
public:  
IEnumerable<EdgeType^> FindEdgeTypes ()
```

F#

```
member FindEdgeTypes : unit -> IEnumerable<EdgeType>
```

Return Value

Type: [IEnumerable\(EdgeType\)](#)

an array of edge types

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.FindVertex Method

Finds vertex having the given value for the given property.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Vertex FindVertex(  
    PropertyType property,  
    IComparable v,  
    bool errorIfNotFound = true  
)
```

VB

```
Public Function FindVertex (  
    property As PropertyType,  
    v As IComparable,  
    Optional errorIfNotFound As Boolean = true  
) As Vertex
```

C++

```
public:  
Vertex^ FindVertex(  
    PropertyType^ property,  
    IComparable^ v,  
    bool errorIfNotFound = true  
)
```

F#

```
member FindVertex :  
    property : PropertyType *  
    v : IComparable *  
    ?errorIfNotFound : bool  
(* Defaults:  
    let_errorIfNotFound = defaultArg errorIfNotFound true  
)  
-> Vertex
```

Parameters

property

Type: [VelocityGraph.PropertyType](#)

v

Type: [System.IComparable](#)

a value to look for

errorIfNotFound (Optional)

VelocityDB Class Library

Type: [System.Boolean](#)

if `true`, throw an exception if an error is found

Return Value

Type: [Vertex](#)

the vertex matching

See Also

Graph.FindVertexProperty Method

Finds a [PropertyType](#) of [VertexType](#).

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public PropertyType FindVertexProperty(  
    VertexType vertexType,  
    string name  
)
```

VB

```
Public Function FindVertexProperty (  
    vertexType As VertexType,  
    name As String  
) As PropertyType
```

C++

```
public:  
PropertyType^ FindVertexProperty(  
    VertexType^ vertexType,  
    String^ name  
)
```

F#

```
member FindVertexProperty :  
    vertexType : VertexType *  
    name : string -> PropertyType
```

Parameters

vertexType

Type: [VelocityGraph.VertexType](#)

vertex type with property type

name

Type: [System.String](#)

a name of a property

Return Value

Type: [PropertyType](#)

[Missing <returns> documentation for

"M:VelocityGraph.Graph.FindVertexProperty(VelocityGraph.VertexType,System.String)"]

VelocityDB Class Library

[VelocityGraph Namespace](#)

Graph.GetEdge Method

Return the edge referenced by the provided object identifier. If no edge is referenced by that identifier, then return null.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEdge GetEdge (
    Object id
)
```

VB

```
Public Function GetEdge (
    id As Object
) As IEdge
```

C++

```
public:
virtual IEdge^ GetEdge (
    Object^ id
) sealed
```

F#

```
abstract GetEdge :
    id : Object -> IEdge
override GetEdge :
    id : Object -> IEdge
```

Parameters

id

Type: [System.Object](#)

the identifier of the edge to retrieved from the graph

Return Value

Type: [IEdge](#)

the edge referenced by the provided identifier or null when no such edge exists

Implements

[IGraph.GetEdge\(Object\)](#)

See Also

[Graph Class](#)

Graph.GetEdges Method

Return an iterable to all the edges in the graph.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IEdge> GetEdges ()
```

VB

```
Public Function GetEdges As IEnumerable (Of IEdge)
```

C++

```
public:  
virtual IEnumerable<IEdge^>^ GetEdges () sealed
```

F#

```
abstract GetEdges : unit -> IEnumerable<IEdge>  
override GetEdges : unit -> IEnumerable<IEdge>
```

Return Value

Type: [IEnumerable\(IEdge\)](#)

an iterable reference to all edges in the graph

Implements

[IGraph.GetEdges\(\)](#)

See Also

[Graph Class](#)

[GetEdges Overload](#)

[VelocityGraph Namespace](#)

Graph.GetEdges Method (String, Object)

Return an iterable to all the edges in the graph that have a particular key/value property.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual IEnumerable<IEdge> GetEdges (  
    string key,  
    Object value  
)
```

VB

```
Public Overridable Function GetEdges (  
    key As String,  
    value As Object  
) As IEnumerable(Of IEdge)
```

C++

```
public:  
virtual IEnumerable<IEdge^>^ GetEdges (

F#

```
abstract GetEdges :  
    key : string *  
    value : Object -> IEnumerable<IEdge>  
override GetEdges :  
    key : string *  
    value : Object -> IEnumerable<IEdge>
```

Parameters

key

Type: [System.String](#)

the key of the edge

value

Type: [System.Object](#)

the value of the edge

Return Value

Type: [IEnumerable\(IEdge\)](#)

an iterable of edges with provided key and value

VelocityDB Class Library

Implements

[IGraph.GetEdges\(String, Object\)](#)

[VelocityGraph Namespace](#)

Graph.GetEdges(*T*) Method (String, *T*)

Return an iterable to all the edges in the graph that have a particular key/value property.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual IEnumerable<IEdge> GetEdges<T>(
    string key,
    T value
)
where T : IComparable
```

VB

```
Public Overridable Function GetEdges(Of T As IComparable) (
    key As String,
    value As T
) As IEnumerable(Of IEdge)
```

C++

```
public:
    generic<typename T>
    where T : IComparable
    virtual IEnumerable<IEdge^>^ GetEdges (
        String^ key,
        T value
    )
```

F#

```
abstract GetEdges :
    key : string *
    value : 'T -> IEnumerable<IEdge> when 'T : IComparable
override GetEdges :
    key : string *
    value : 'T -> IEnumerable<IEdge> when 'T : IComparable
```

Parameters

key

Type: [System.String](#)

the key of the edge

value

Type: *T*

the value of the edge

Type Parameters

T

[Missing <typeparam name="T"/> documentation for "M:VelocityGraph.Graph.GetEdges`1(System.String,`0)"]

Return Value

Type: [IEnumerable\(IEdge\)](#)

an iterable of edges with provided key and value

See Also

Graph.EdgeType Method

Get a [EdgeType](#) associated with an [Edge](#) id

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public EdgeType GetEdgeType (  
    int id  
)
```

VB

```
Public Function GetEdgeType (  
    id As Integer  
) As EdgeType
```

C++

```
public:  
EdgeType^ GetEdgeType (  
    int id  
)
```

F#

```
member GetEdgeType :  
    id : int -> EdgeType
```

Parameters

id

Type: [System.Int32](#)

Id to look for

Return Value

Type: [EdgeType](#)

the associated edge type

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.GetValues Method

Enumerates all the values for the given vertex/edge property

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IComparable> GetValues (  
    PropertyType property  
)
```

VB

```
Public Function GetValues (  
    property As PropertyType  
) As IEnumerable(Of IComparable)
```

C++

```
public:  
IEnumerable<IComparable^> GetValues (  
    PropertyType^ property  
)
```

F#

```
member GetValues :  
    property : PropertyType -> IEnumerable<IComparable>
```

Parameters

property

Type: [VelocityGraph.PropertyType](#)

Edge or Vertex property

Return Value

Type: [IEnumerable\(IComparable\)](#)

Enumeration of property values

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.GetVertex Method

Overload List

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
|  | GetVertex(Int32) | Look up a Vertex |
|  | GetVertex(Object) | Return the vertex referenced by the provided object identifier. If no vertex is referenced by that identifier, then return null. |

Graph.GetVertex Method (Int32)

Look up a [Vertex](#)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Vertex GetVertex(  
    int id  
)
```

VB

```
Public Function GetVertex (  
    id As Integer  
) As Vertex
```

C++

```
public:  
Vertex^ GetVertex(  
    int id  
)
```

F#

```
member GetVertex :  
    id : int -> Vertex
```

Parameters

id

Type: [System.Int32](#)

Id of [Vertex](#) to lookup

Return Value

Type: [Vertex](#)

A vertex with the matching id

See Also

[Graph Class](#)

[GetVertex Overload](#)

[VelocityGraph Namespace](#)

Graph.GetVertex Method (Object)

Return the vertex referenced by the provided object identifier. If no vertex is referenced by that identifier, then return null.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IVertex GetVertex(  
    Object id  
)
```

VB

```
Public Function GetVertex (  
    id As Object  
) As IVertex
```

C++

```
public:  
virtual IVertex^ GetVertex(  
    Object^ id  
) sealed
```

F#

```
abstract GetVertex :  
    id : Object -> IVertex  
override GetVertex :  
    id : Object -> IVertex
```

Parameters

id

Type: [System.Object](#)

the identifier of the vertex to retrieved from the graph, must be a UInt64

Return Value

Type: [IVertex](#)

the vertex referenced by the provided identifier or null when no such vertex exists

Implements

[IGraph.GetVertex\(Object\)](#)

Graph.ImportGraphJson Method (Stream, Int32)

Input the GrapJson JSON stream data into the graph. In practice, usually the provided graph is empty.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void ImportGraphJson(  
    Stream grapJsonInputStream,  
    int bufferSize = 1000  
)
```

VB

```
Public Sub ImportGraphJson (  
    grapJsonInputStream As Stream,  
    Optional bufferSize As Integer = 1000  
)
```

C++

```
public:  
void ImportGraphJson(  
    Stream^ grapJsonInputStream,  
    int bufferSize = 1000  
)
```

F#

```
member ImportGraphJson :  
    grapJsonInputStream : Stream *  
    ?bufferSize : int  
(* Defaults:  
    let _bufferSize = defaultArg bufferSize 1000  
)  
-> unit
```

Parameters

grapJsonInputStream

Type: [System.IO.Stream](#)

an Stream of GraphJson JSON data

bufferSize (Optional)

Type: [System.Int32](#)

the amount of elements to hold in memory before committing a transactions

)
```

VB

```
Public Sub ImportGraphSon (  
    jsonInputStream As Stream,  
    bufferSize As Integer  
)
```

C++

```
public:  
void ImportGraphSon(  
    Stream^ jsonInputStream,  
    int bufferSize  
)
```

F#

```
member ImportGraphSon :  
    jsonInputStream : Stream *  
    bufferSize : int -> unit
```

Parameters

jsonInputStream

Type: [System.IO.Stream](#)

an Stream of JSON data

bufferSize

Type: [System.Int32](#)

the amount of elements to hold in memory before committing a transactions

Graph.NewEdge Method

Overload List

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | NewEdge(EdgeType, Vertex, Vertex) | Creates a new edge instance. |
|  | NewEdge(EdgeType, PropertyType, Object, PropertyType, Object) | Creates a new edge instance. The tail of the edge will be any node having the given tailV Value for the given tailAttr Property identifier, and the head of the edge will be any node having the given headV Value for the given headAttr Property identifier. |

Graph.NewEdge Method (EdgeType, Vertex, Vertex)

Creates a new edge instance.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Edge NewEdge(  
    EdgeType edgeType,  
    Vertex tail,  
    Vertex head  
)
```

VB

```
Public Function NewEdge (  
    edgeType As EdgeType,  
    tail As Vertex,  
    head As Vertex  
) As Edge
```

C++

```
public:  
Edge^ NewEdge (  
    EdgeType^ edgeType,  
    Vertex^ tail,  
    Vertex^ head  
)
```

F#

```
member NewEdge :  
    edgeType : EdgeType *  
    tail : Vertex *  
    head : Vertex -> Edge
```

Parameters

edgeType

Type: [VelocityGraph.EdgeType](#)

Edge type identifier.

tail

Type: [VelocityGraph.Vertex](#)

Source OID.

head

Type: [VelocityGraph.Vertex](#)

Target OID.

VelocityDB Class Library

Return Value

Type: [Edge](#)

Unique OID of the new edge instance.

See Also

[Graph Class](#)

[NewEdge Overload](#)

[VelocityGraph Namespace](#)

Graph.NewEdge Method (EdgeType, PropertyType, Object, PropertyType, Object)

Creates a new edge instance. The tail of the edge will be any node having the given tailV Value for the given tailAttr Property identifier, and the head of the edge will be any node having the given headV Value for the given headAttr Property identifier.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEdge NewEdge (
    EdgeType edgeType,
    PropertyType tailAttr,
    Object tailV,
    PropertyType headAttr,
    Object headV
)
```

VB

```
Public Function NewEdge (
    edgeType As EdgeType,
    tailAttr As PropertyType,
    tailV As Object,
    headAttr As PropertyType,
    headV As Object
) As IEdge
```

C++

```
public:
IEdge^ NewEdge (
    EdgeType^ edgeType,
    PropertyType^ tailAttr,
    Object^ tailV,
    PropertyType^ headAttr,
    Object^ headV
)
```

F#

```
member NewEdge :
    edgeType : EdgeType *
    tailAttr : PropertyType *
    tailV : Object *
    headAttr : PropertyType *
    headV : Object -> IEdge
```

VelocityDB Class Library

Parameters

edgeType

Type: [VelocityGraph.EdgeType](#)

Node or edge type identifier.

tailAttr

Type: [VelocityGraph.PropertyType](#)

Property identifier.

tailV

Type: [System.Object](#)

Tail value

headAttr

Type: [VelocityGraph.PropertyType](#)

Property identifier.

headV

Type: [System.Object](#)

Head value

Return Value

Type: [IEdge](#)

Unique edge instance.

Graph.NewEdgeProperty Method

Creates a new Property.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public PropertyType NewEdgeProperty(  
    EdgeType edgeType,  
    string name,  
    DataType dt,  
    PropertyKind kind  
)
```

VB

```
Public Function NewEdgeProperty (  
    edgeType As EdgeType,  
    name As String,  
    dt As DataType,  
    kind As PropertyKind  
) As PropertyType
```

C++

```
public:  
PropertyType^ NewEdgeProperty(  
    EdgeType^ edgeType,  
    String^ name,  
    DataType dt,  
    PropertyKind kind  
)
```

F#

```
member NewEdgeProperty :  
    edgeType : EdgeType *  
    name : string *  
    dt : DataType *  
    kind : PropertyKind -> PropertyType
```

Parameters

edgeType

Type: [VelocityGraph.EdgeType](#)

Node or edge type identifier.

name

Type: [System.String](#)

Unique name for the new Property.

VelocityDB Class Library

dt

Type: [VelocityGraph.DataType](#)

Data type for the new Property.

kind

Type: [VelocityGraph.PropertyKind](#)

Property kind.

Return Value

Type: [PropertyType](#)

Unique Property identifier.

Graph.NewEdgeType Method (String, Boolean, EdgeType)

Creates a new edge type.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public EdgeType NewEdgeType(  
    string name,  
    bool bidirectional,  
    EdgeType baseType = null  
)
```

VB

```
Public Function NewEdgeType (  
    name As String,  
    bidirectional As Boolean,  
    Optional baseType As EdgeType = Nothing  
) As EdgeType
```

C++

```
public:  
EdgeType^ NewEdgeType(  
    String^ name,  
    bool bidirectional,  
    EdgeType^ baseType = nullptr  
)
```

F#

```
member NewEdgeType :  
    name : string *  
    bidirectional : bool *  
    ?baseType : EdgeType  
(* Defaults:  
    let_baseType = defaultArg baseType null  
*)  
-> EdgeType
```

Parameters

name

Type: [System.String](#)

Unique name for the new edge type.

bidirectional

Type: [System.Boolean](#)

If true, this creates a bidirectional edge type, otherwise this creates a unidirectional edge type.

VelocityDB Class Library

baseType (Optional)

Type: [VelocityGraph.EdgeType](#)

Base EdgeType for the new EdgeType.

Return Value

Type: [EdgeType](#)

Unique edge type.

Return Value

Type: [EdgeType](#)

a new edge type

Creates a new edge type.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public EdgeType NewEdgeType (  
    string name,  
    bool bidirectional,  
    VertexType tailType,  
    VertexType headType,  
    EdgeType baseType = null  
)
```

VB

```
Public Function NewEdgeType (  
    name As String,  
    bidirectional As Boolean,  
    tailType As VertexType,  
    headType As VertexType,  
    Optional baseType As EdgeType = Nothing  
) As EdgeType
```

C++

```
public:  
EdgeType^ NewEdgeType (  
    String^ name,  
    bool bidirectional,  
    VertexType^ tailType,  
    VertexType^ headType,  
    EdgeType^ baseType = nullptr  
)
```

F#

```
member NewEdgeType :  
    name : string *  
    bidirectional : bool *  
    tailType : VertexType *  
    headType : VertexType *  
    ?baseType : EdgeType  
(* Defaults:  
    let_baseType = defaultArg baseType null  
*)  
-> EdgeType
```

VelocityDB Class Library

Parameters

name

Type: [System.String](#)

Unique name for the new edge type.

bidirectional

Type: [System.Boolean](#)

If true, this creates a bidirectional edge type, otherwise this creates a unidirectional edge type.

tailType

Type: [VelocityGraph.VertexType](#)

a fixed tail VertexType

headType

Type: [VelocityGraph.VertexType](#)

a fixed head VertexType

baseType (Optional)

Type: [VelocityGraph.EdgeType](#)

if specified make the new [EdgeType](#) a subclass of this [EdgeType](#)

Return Value

Type: [EdgeType](#)

Unique edge type.

Return Value

Type: [EdgeType](#)

a new edge type

Graph.NewVertex Method

Creates a new node instance.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Vertex NewVertex(  
    VertexType vertexType,  
    int vId = 0  
)
```

VB

```
Public Function NewVertex (  
    vertexType As VertexType,  
    Optional vId As Integer = 0  
) As Vertex
```

C++

```
public:  
Vertex^ NewVertex(  
    VertexType^ vertexType,  
    int vId = 0  
)
```

F#

```
member NewVertex :  
    vertexType : VertexType *  
    ?vId : int  
(* Defaults:  
    let _vId = defaultArg vId 0  
)  
-> Vertex
```

Parameters

vertexType

Type: [VelocityGraph.VertexType](#)

Node type identifier.

vId (Optional)

Type: [System.Int32](#)

[Missing <param name="vId"/> documentation for "M:VelocityGraph.Graph.NewVertex(VelocityGraph.VertexType,System.Int32)"]

VelocityDB Class Library

Return Value

Type: [Vertex](#)

Unique OID of the new node instance.

    VertexType^ vertexType,  
    String^ name,  
    DataType dt,  
    PropertyKind kind  
)
```

F#

```
member NewVertexProperty :  
    vertexType : VertexType *  
    name : string *  
    dt : DataType *  
    kind : PropertyKind -> PropertyType
```

Parameters

vertexType

Type: [VelocityGraph.VertexType](#)

Node or edge type identifier.

name

Type: [System.String](#)

Unique name for the new Property.

VelocityDB Class Library

dt

Type: [VelocityGraph.DataType](#)

Data type for the new Property.

kind

Type: [VelocityGraph.PropertyKind](#)

Property kind.

Return Value

Type: [PropertyType](#)

Unique Property identifier.

Graph.Open Method

Opens a graph

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static Graph Open(  
    SessionBase session,  
    int graphInstance = 0  
)
```

VB

```
Public Shared Function Open (  
    session As SessionBase,  
    Optional graphInstance As Integer = 0  
) As Graph
```

C++

```
public:  
static Graph^ Open(  
    SessionBase^ session,  
    int graphInstance = 0  
)
```

F#

```
static member Open :  
    session : SessionBase *  
    ?graphInstance : int  
(* Defaults:  
    let_graphInstance = defaultArg graphInstance 0  
)  
-> Graph
```

Parameters

session

Type: [VelocityDb.Session.SessionBase](#)

session to be associated with the opened graph

graphInstance (Optional)

Type: [System.Int32](#)

if multiple graphs exist, choose which one to open

Return Value

Type: [Graph](#)

A graph

VelocityDB Class Library

Graph.Persist Method

Persists this object. Override in your subclasses when you want fields of your class to be persisted in some special way.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override ulong Persist(
    Placement place,
    SessionBase session,
    bool persistRefs = true,
    bool disableFlush = false,
    Queue<IOptimizedPersistable> toPersist = null
)
```

VB

```
Public Overrides Function Persist (
    place As Placement,
    session As SessionBase,
    Optional persistRefs As Boolean = true,
    Optional disableFlush As Boolean = false,
    Optional toPersist As Queue(Of IOptimizedPersistable) = Nothing
) As ULong
```

C++

```
public:
virtual unsigned long long Persist(
    Placement^ place,
    SessionBase^ session,
    bool persistRefs = true,
    bool disableFlush = false,
    Queue<IOptimizedPersistable^>^ toPersist = nullptr
) override
```

F#

```
abstract Persist :
    place : Placement *
    session : SessionBase *
    ?persistRefs : bool *
    ?disableFlush : bool *
    ?toPersist : Queue<IOptimizedPersistable>
(* Defaults:
    let _persistRefs = defaultArg persistRefs true
    let _disableFlush = defaultArg disableFlush false
    let _toPersist = defaultArg toPersist null
*)
-> uint64
override Persist :
```

```
    place : Placement *
    session : SessionBase *
    ?persistRefs : bool *
    ?disableFlush : bool *
    ?toPersist : Queue<IOptimizedPersistable>
(* Defaults:
    let_persistRefs = defaultArg persistRefs true
    let_disableFlush = defaultArg disableFlush false
    let_toPersist = defaultArg toPersist null
*)
-> uint64
```

Parameters

place

Type: [VelocityDb.Placement](#)

The placement rules to follow when persisting this object

session

Type: [VelocityDb.Session.SessionBase](#)

The session managing this object

persistRefs (Optional)

Type: [System.Boolean](#)

If true, objects referenced from this object will also be persisted

disableFlush (Optional)

Type: [System.Boolean](#)

If true, disables possible flushing of updated pages while persisting this object; otherwise page flushing may occur

toPersist (Optional)

Type: [System.Collections.Generic.Queue<IOptimizedPersistable>](#)

A queue of objects remaining to be persisted. Pass as a parameter to session.Persist

Return Value

Type: [UInt64](#)

The object id of this persistent object

Implements

[IOptimizedPersistable.Persist\(Placement, SessionBase, Boolean, Boolean, Queue<IOptimizedPersistable>\)](#)

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.Query Method

Generate a query object that can be used to fine tune which edges/vertices are retrieved from the graph.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IQuery Query()
```

VB

```
Public Function Query As IQuery
```

C++

```
public:  
virtual IQuery^ Query() sealed
```

F#

```
abstract Query : unit -> IQuery  
override Query : unit -> IQuery
```

Return Value

Type: [IQuery](#)

a graph query object with methods for constraining which data is pulled from the underlying graph

Implements

[IGraph.Query\(\)](#)

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.RemoveEdge Method

Remove the provided edge from the graph.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void RemoveEdge (
    IEdge edge
)
```

VB

```
Public Sub RemoveEdge (
    edge As IEdge
)
```

C++

```
public:
virtual void RemoveEdge (
    IEdge^ edge
) sealed
```

F#

```
abstract RemoveEdge :
    edge : IEdge -> unit
override RemoveEdge :
    edge : IEdge -> unit
```

Parameters

edge

Type: [VelocityGraph.Frontenac.Blueprints.IEdge](#)

the edge to remove from the graph

Implements

[IGraph.RemoveEdge\(IEdge\)](#)

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.RemovePropertyType Method

Removes a property type except if any vertex or edge is using it

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void RemovePropertyType (
    PropertyType pt
)
```

VB

```
Public Sub RemovePropertyType (
    pt As PropertyType
)
```

C++

```
public:
void RemovePropertyType (
    PropertyType^ pt
)
```

F#

```
member RemovePropertyType :
    pt : PropertyType -> unit
```

Parameters

pt

Type: [VelocityGraph.PropertyType](#)

property type to remove

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.RemoveVertex Method

Remove the provided vertex from the graph. Upon removing the vertex, all the edges by which the vertex is connected must be removed as well.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void RemoveVertex(  
    IVertex vertex  
)
```

VB

```
Public Sub RemoveVertex (  
    vertex As IVertex  
)
```

C++

```
public:  
virtual void RemoveVertex(  
    IVertex^ vertex  
) sealed
```

F#

```
abstract RemoveVertex :  
    vertex : IVertex -> unit  
override RemoveVertex :  
    vertex : IVertex -> unit
```

Parameters

vertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

the vertex to remove from the graph

Implements

[IGraph.RemoveVertex\(IVertex\)](#)

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.RemoveVertexType Method

Removes a [VertexType](#) from this graph. An exception is thrown if the [VertexType](#) is in use.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void RemoveVertexType (  
    VertexType type  
)
```

VB

```
Public Sub RemoveVertexType (  
    type As VertexType  
)
```

C++

```
public:  
void RemoveVertexType (  
    VertexType^ type  
)
```

F#

```
member RemoveVertexType :  
    type : VertexType -> unit
```

Parameters

type

Type: [VelocityGraph.VertexType](#)

a [VertexType](#) instance

Graph.Select Method (PropertyType, Func(IComparable, IComparable, Boolean), IComparable)

Enumerates all elements satisfying the given condition for the given property and value

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IElement> Select(  
    PropertyType property,  
    Func<IComparable, IComparable, bool> condition,  
    IComparable value  
)
```

VB

```
Public Function Select (  
    property As PropertyType,  
    condition As Func(Of IComparable, IComparable, Boolean),  
    value As IComparable  
) As IEnumerable(Of IElement)
```

C++

```
public:  
IEnumerable<IElement>^ Select(  
    PropertyType^ property,  
    Func<IComparable^, IComparable^, bool>^ condition,  
    IComparable^ value  
)
```

F#

```
member Select :  
    property : PropertyType *  
    condition : Func<IComparable, IComparable, bool> *  
    value : IComparable -> IEnumerable<IElement>
```

Parameters

property

Type: [VelocityGraph.PropertyType](#)

Property we are looking for

condition

Type: [System.Func\(IComparable, IComparable, Boolean\)](#)

A filter function, applied with in graph value as 1st parameter and value as second parameter.

value

VelocityDB Class Library

Type: [System.IComparable](#)

Filtering value

Return Value

Type: [IEnumerable\(IElement\)](#)

Enum of IElement

See Also

[Graph Class](#)

[Select Overload](#)

[VelocityGraph Namespace](#)

Graph.Select Method (PropertyType, Func(IComparable, IComparable, IComparable, Boolean), IComparable, IComparable)

numerates all elements satisfying the given condition for the given property and value range

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IElement> Select(  
    PropertyType property,  
    Func<IComparable, IComparable, IComparable, bool> condition,  
    IComparable lower,  
    IComparable higher  
)
```

VB

```
Public Function Select (  
    property As PropertyType,  
    condition As Func(Of IComparable, IComparable, IComparable, Boolean),  
    lower As IComparable,  
    higher As IComparable  
) As IEnumerable(Of IElement)
```

C++

```
public:  
IEnumerable<IElement>^ Select(  
    PropertyType^ property,  
    Func<IComparable^, IComparable^, IComparable^, bool>^ condition,  
    IComparable^ lower,  
    IComparable^ higher  
)
```

F#

```
member Select :  
    property : PropertyType *  
    condition : Func<IComparable, IComparable, IComparable, bool> *  
    lower : IComparable *  
    higher : IComparable -> IEnumerable<IElement>
```

Parameters

property

Type: [VelocityGraph.PropertyType](#)

Property we are looking for

condition

Type: [System.Func\(IComparable, IComparable, IComparable, Boolean\)](#)

filter function, applied with in graph value as 1st parameter, lower as 2nd and higher as 3rd parameter.

lower

Type: [System.IComparable](#)

lower value in filtering

higher

Type: [System.IComparable](#)

higher value in filtering

Return Value

Type: [IEnumerable\(IElement\)](#)

[Missing <returns> documentation for

"M:VelocityGraph.Graph.Select(VelocityGraph.PropertyType,System.Func{System.IComparable,System.IComparable,System.IComparable,System.Boolean},System.IComparable,System.IComparable)"]

Graph.Shutdown Method

A shutdown function is required to properly close the graph. This is important for implementations that utilize disk-based serializations.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void Shutdown ()
```

VB

```
Public Sub Shutdown
```

C++

```
public:  
virtual void Shutdown () sealed
```

F#

```
abstract Shutdown : unit -> unit  
override Shutdown : unit -> unit
```

Implements

[IGraph.Shutdown\(\)](#)

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.ToString Method

Displays class name plus object id

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override string ToString()
```

VB

```
Public Overrides Function ToString As String
```

C++

```
public:  
virtual String^ ToString() override
```

F#

```
abstract ToString : unit -> string  
override ToString : unit -> string
```

Return Value

Type: [String](#)

A [String](#) containing class name and object id.

See Also

[Graph Class](#)

[VelocityGraph Namespace](#)

Graph.Traverse Method

Selects all neighbor Vertices from or to each of the node OID in the given collection and for the given edge type.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Dictionary<Vertex, HashSet<Edge>> Traverse (
    Vertex[] vertices,
    EdgeType etype,
    Direction dir
)
```

VB

```
Public Function Traverse (
    vertices As Vertex(),
    etype As EdgeType,
    dir As Direction
) As Dictionary(Of Vertex, HashSet(Of Edge))
```

C++

```
public:
    Dictionary<Vertex^, HashSet<Edge^>> Traverse (
        array<Vertex^> vertices,
        EdgeType^ etype,
        Direction dir
    )
```

F#

```
member Traverse :
    vertices : Vertex[] *
    etype : EdgeType *
    dir : Direction -> Dictionary<Vertex, HashSet<Edge>>
```

Parameters

vertices

Type: [VelocityGraph.Vertex\[\]](#)

Vertex collection.

etype

Type: [VelocityGraph.EdgeType](#)

Edge type identifier.

dir

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

Direction.

Return Value

Type: [Dictionary\(Vertex, HashSet\(Edge\)\)](#)

Dictionary of vertex keys with edges path to vertex

[VelocityGraph Namespace](#)

Graph.Unpersist Method

Removes an object from the persistent store and makes the object a transient object. It does not automatically make referenced objects unpersisted. Best way to do so is to override this virtual function in your own classes.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override void Unpersist(  
    SessionBase session  
)
```

VB

```
Public Overrides Sub Unpersist (  
    session As SessionBase  
)
```

C++

```
public:  
virtual void Unpersist(  
    SessionBase^ session  
) override
```

F#

```
abstract Unpersist :  
    session : SessionBase -> unit  
override Unpersist :  
    session : SessionBase -> unit
```

Parameters

session

Type: [VelocityDb.Session.SessionBase](#)

The managing session

Implements

[IOptimizedPersistable.Unpersist\(SessionBase\)](#)

See Also

[System.Object](#)

VelocityGraph.GraphJsonSettings

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class GraphJsonSettings
```

VB

```
Public Class GraphJsonSettings
```

C++

```
public ref class GraphJsonSettings
```

F#

```
type GraphJsonSettings = class end
```

The **GraphJsonSettings** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------------|------------------------------------------------------------------|
|  | GraphJsonSettings | Initializes a new instance of the GraphJsonSettings class |

Properties

| | Name | Description |
|----------------------------------------------------------------------------------------------|----------------------------------|-------------|

PropertyKind Enumeration

A property can be index or not or index can require each entry to be unique

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public enum PropertyKind
```

VB

```
Public Enumeration PropertyKind
```

C++

```
public enum class PropertyKind
```

F#

```
type PropertyKind
```

Members

| Member name | Value | Description |
|-------------------|-------|---------------------------------------------|
| Indexed | 0 | Add to index |
| Unique | 1 | Add to index and require value to be unique |
| NotIndexed | 2 | Don't index |

[<SerializableAttribute>]
type PropertyType =
    class
        inherit OptimizedPersistable
    end
```

The **PropertyType** type exposes the following members.

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------------------|-----------------------------------------------------------------------------------------------|
|  | IsVertexProperty | Is this a Vertex property, if not then it is an Edge property |
|  | MyGraph | |
|  | Name | Get name of this property |
|  | PropertyId | Get id of this property type |
|  | TypeId | Id of a Vertex or Edge |

| | |
|-------------------------------------------------------------------------------------------------------------|---------------------------------------------------|
|  ValueType | Get the type of property values for this property |
|-------------------------------------------------------------------------------------------------------------|---------------------------------------------------|

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------------------------------------------------------|---------------------------------------------------------------------|
|  | GetPropertyEdge | Try to find an Edge with a given property value. |
|  | GetPropertyEdges | Try to find all Edge with a given property value. |
|  | GetPropertyValue | Get property value of a Vertex/Edge |
|  | GetPropertyVertex | |
|  | GetPropertyVertices(Boolean) | |
|  | GetPropertyVertices(Comparable, Boolean) | Try to find all Vertex with a given property value. |
|  | HasPropertyValue | Check if an element has a property value |
|  | RemovePropertyValue | Remove a property value |
|  | SetPropertyValue(EdgeType, Int32, Int32, Comparable) | |
|  | SetPropertyValue(VertexType, Int32, Int32, Comparable) | Sets a property value for an element |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------|
|  | ToStringDetails(SessionBase, Boolean) | Overloaded. Object details as a string (Defined by Utilities .) |
|  | ToStringDetails(Schema, TypeVersion, Boolean) | Overloaded. Currently only used by Database Manager (Defined by Utilities .) |

    bool polymorphic = false,  
    bool errorIfNotFound = true  
)
```

VB

```
Public MustOverride Function GetPropertyVertex (  
    value As IComparable,  
    Optional polymorphic As Boolean = false,  
    Optional errorIfNotFound As Boolean = true  
) As Vertex
```

C++

```
public:  
virtual Vertex^ GetPropertyVertex(  
    IComparable^ value,  
    bool polymorphic = false,  
    bool errorIfNotFound = true  
) abstract
```

F#

```
abstract GetPropertyVertex :  
    value : IComparable *  
    ?polymorphic : bool *  
    ?errorIfNotFound : bool  
(* Defaults:  
    let_polymorphic = defaultArg polymorphic false  
    let_errorIfNotFound = defaultArg errorIfNotFound true  
)  
-> Vertex
```

Parameters

value

Type: [System.IComparable](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.PropertyType.GetPropertyVertex(System.IComparable,System.Boolean,System.Boolean)"]

polymorphic (Optional)

Type: [System.Boolean](#)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
[SerializableAttribute]
public class PropertyTypeNoDuplicateValues<T> : PropertyTypeT<ulong>
where T : IComparable
```

VB

```
<SerializableAttribute>
Public Class PropertyTypeNoDuplicateValues(Of T As IComparable)
    Inherits PropertyTypeT(Of ULong)
```

C++

```
[SerializableAttribute]
generic<typename T>
where T : IComparable
public ref class PropertyTypeNoDuplicateValues : public
PropertyTypeT<unsigned long long>
```

F#

```
[<SerializableAttribute>]
type PropertyTypeNoDuplicateValues<'T when 'T : IComparable> =
    class
        inherit PropertyTypeT<uint64>
    end
```

Type Parameters

T

always [String](#) for now

The PropertyTypeNoDuplicateValues(T) type exposes the following members.

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------|-----------------------------------------------------------------------------|
|  | ValueType | Get the value Type (Overrides PropertyTypeT(T).ValueType.) |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | GetPropertyEdge(IComparable) | Try to find an Edge with a given property value. (Overrides PropertyTypeT(T).GetPropertyEdge(IComparable).) |
|  | GetPropertyEdge(T) | Try to find an Edge with a given property value. |
|  | GetPropertyEdges(IComparable) | Try to find all Edge with a given property value. (Overrides PropertyTypeT(T).GetPropertyEdges(IComparable).) |
|  | GetPropertyEdges(T) | |
|  | GetPropertyValue | Get property value of a Vertex/Edge (Overrides PropertyTypeT(T).GetPropertyValue(Int32).) |
|  | GetPropertyVertex(IComparable, Boolean, Boolean) | (Overrides PropertyTypeT(T).GetPropertyVertex(IComparable, Boolean, Boolean).) |
|  | GetPropertyVertex(T, Boolean, Boolean) | Try to find a Vertex with a given property value. |
|  | GetPropertyVertices(IComparable, Boolean) | Try to find all Vertex with a given property value. (Overrides PropertyTypeT(T).GetPropertyVertices(IComparable, Boolean).) |
|  | GetPropertyVertices(T, Boolean) | Try to find all Vertex with a given property value. |
|  | SetPropertyValue(EdgeType, Int32, Int32, IComparable) | (Overrides PropertyTypeT(T).SetPropertyValue(EdgeType, Int32, Int32, IComparable).) |
|  | SetPropertyValue(VertexType, Int32, Int32, IComparable) | Sets a property value for an element (Overrides PropertyTypeT(T).SetPropertyValue(VertexType, Int32, Int32, IComparable).) |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------|
|  | ToStringDetails(SessionBase, Boolean) | Overloaded. Object details as a string (Defined by Utilities.) |
|  | ToStringDetails(Schema, TypeVersion, Boolean) | Overloaded. Currently only used by Database Manager (Defined by Utilities.) |

Methods

The [PropertyTypeNoDuplicateValues\(T\)](#) generic type exposes the following members.

Methods

| Name | Description |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  GetPropertyEdge(IComparable) | Try to find an Edge with a given property value. (Overrides PropertyTypeT(T).GetPropertyEdge(IComparable).) |
|  GetPropertyEdge(T) | Try to find an Edge with a given property value. |
|  GetPropertyEdges(IComparable) | Try to find all Edge with a given property value. (Overrides PropertyTypeT(T).GetPropertyEdges(IComparable).) |
|  GetPropertyEdges(T) | |
|  GetPropertyValue | Get property value of a Vertex/Edge (Overrides PropertyTypeT(T).GetPropertyValue(Int32).) |
|  GetPropertyVertex(IComparable, Boolean, Boolean) | (Overrides PropertyTypeT(T).GetPropertyVertex(IComparable, Boolean, Boolean).) |
|  GetPropertyVertex(T, Boolean, Boolean) | Try to find a Vertex with a given property value. |
|  GetPropertyVertices(IComparable, Boolean) | Try to find all Vertex with a given property value. (Overrides PropertyTypeT(T).GetPropertyVertices(IComparable, Boolean).) |
|  GetPropertyVertices(T, Boolean) | Try to find all Vertex with a given property value. |
|  SetPropertyValue(EdgeType, Int32, Int32, IComparable) | (Overrides PropertyTypeT(T).SetPropertyValue(EdgeType, Int32, Int32, IComparable).) |
|  SetPropertyValue(VertexType, Int32, Int32, IComparable) | Sets a property value for an element (Overrides PropertyTypeT(T).SetPropertyValue(VertexType, Int32, Int32, IComparable).) |

Extension Methods

| Name | Description |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
|  ToStringDetails(SessionBase, Boolean) | Overloaded. Object details as a string (Defined by Utilities.) |
|  ToStringDetails(Schema, TypeVersion, Boolean) | Overloaded. Currently only used by Database Manager (Defined by Utilities.) |

PropertyTypeNoDuplicateValues(T).GetPropertyVertices Method

Overload List

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | GetPropertyVertices(IComparable, Boolean) | Try to find all Vertex with a given property value. (Overrides PropertyTypeT(T).GetPropertyVertices(IComparable, Boolean) .) |
|  | GetPropertyVertices(T, Boolean) | Try to find all Vertex with a given property value. |

See Also

[PropertyTypeNoDuplicateValues\(T\) Class](#)

[VelocityGraph Namespace](#)

PropertyTypeNoDuplicateValues(T).GetPropertyVertices Method (IComparable, Boolean)

Try to find all [Vertex](#) with a given property value.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override IEnumerable<Vertex> GetPropertyVertices (
    IComparable value,
    bool polymorphic = false
)
```

VB

```
Public Overrides Function GetPropertyVertices (
    value As IComparable,
    Optional polymorphic As Boolean = false
) As IEnumerable(Of Vertex)
```

C++

```
public:
virtual IEnumerable<Vertex^>^ GetPropertyVertices (
    IComparable^ value,
    bool polymorphic = false
) override
```

F#

```
abstract GetPropertyVertices :
    value : IComparable *
    ?polymorphic : bool
(* Defaults:
    let_polymorphic = defaultArg polymorphic false
*)
-> IEnumerable<Vertex>
override GetPropertyVertices :
    value : IComparable *
    ?polymorphic : bool
(* Defaults:
    let_polymorphic = defaultArg polymorphic false
*)
-> IEnumerable<Vertex>
```

Parameters

value

Type: [System.IComparable](#)

The property value to look for

polymorphic (Optional)

Type: [System.Boolean](#)

If true, also look for property value matching vertices of property [VertexType](#) sub classes

Return Value

Type: [IEnumerable\(Vertex\)](#)

Enumeration of matching vertices

See Also

[PropertyTypeNoDuplicateValues\(T\)Class](#)

[GetPropertyVertices Overload](#)

[VelocityGraph Namespace](#)

PropertyTypeNoDuplicateValues(*T*).GetPropertyVertices Method (*T*, Boolean)

Try to find all [Vertex](#) with a given property value.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<Vertex> GetPropertyVertices (
    T value,
    bool polymorphic = false
)
```

VB

```
Public Function GetPropertyVertices (
    value As T,
    Optional polymorphic As Boolean = false
) As IEnumerable(Of Vertex)
```

C++

```
public:
    IEnumerable<Vertex^>^ GetPropertyVertices (
        T value,
        bool polymorphic = false
    )
```

F#

```
member GetPropertyVertices :
    value : 'T *
    ?polymorphic : bool
(* Defaults:
    let_polymorphic = defaultArg polymorphic false
*)
-> IEnumerable<Vertex>
```

Parameters

value

Type: *T*

The property value to look for

polymorphic (Optional)

Type: [System.Boolean](#)

If true, also look for property value matching vertices of property [VertexType](#) sub classes

VelocityDB Class Library

Return Value

Type: [IEnumerable\(Vertex\)](#)

Enumeration of matching vertices

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override void SetPropertyValue(  
    EdgeType et,  
    int element,  
    int typeId,  
    IComparable value  
)
```

VB

```
Public Overrides Sub SetPropertyValue (  
    et As EdgeType,  
    element As Integer,  
    typeId As Integer,  
    value As IComparable  
)
```

C++

```
public:  
virtual void SetPropertyValue(  
    EdgeType^ et,  
    int element,  
    int typeId,  
    IComparable^ value  
) override
```

F#

```
abstract SetPropertyValue :  
    et : EdgeType *  
    element : int *  
    typeId : int *  
    value : IComparable -> unit  
override SetPropertyValue :  
    et : EdgeType *  
    element : int *  
    typeId : int *  
    value : IComparable -> unit
```

Parameters

et

Type: [VelocityGraph.EdgeType](#)

[Missing <param name="et"/> documentation for
"M:VelocityGraph.PropertyTypeNoDuplicateValues`1.SetPropertyValue(VelocityGraph.EdgeType,System.Int32,System.Int32,System.IComparable)"]

Sets a property value for an element

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override void SetPropertyValue (
    VertexType vt,
    int element,
    int typeId,
    IComparable value
)
```

VB

```
Public Overrides Sub SetPropertyValue (
    vt As VertexType,
    element As Integer,
    typeId As Integer,
    value As IComparable
)
```

C++

```
public:
virtual void SetPropertyValue (
    VertexType^ vt,
    int element,
    int typeId,
    IComparable^ value
) override
```

F#

```
abstract SetPropertyValue :
    vt : VertexType *
    element : int *
    typeId : int *
    value : IComparable -> unit
override SetPropertyValue :
    vt : VertexType *
    element : int *
    typeId : int *
    value : IComparable -> unit
```

Parameters

vt

Type: [VelocityGraph.VertexType](#)

[Missing <param name="vt"/> documentation for "M:VelocityGraph.PropertyTypeNoDuplicateValues`1.SetPropertyValue(VelocityGraph.VertexType,System.Int32,System.Int32,System.IComparable)"]

element

[VelocityGraph.PropertyTypeNoDuplicateValues\(T\)](#)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
[SerializableAttribute]  
public class PropertyTypeT<T> : PropertyType  
where T : IComparable
```

VB

```
<SerializableAttribute>  
Public Class PropertyTypeT(Of T As IComparable)  
    Inherits PropertyType
```

C++

```
[SerializableAttribute]  
generic<typename T>  
where T : IComparable  
public ref class PropertyTypeT : public PropertyType
```

F#

```
[<SerializableAttribute>]  
type PropertyTypeT<'T when 'T : IComparable> =  
    class  
        inherit PropertyType  
    end
```

Type Parameters

T

The type of value used by the property type

The PropertyTypeT(T) type exposes the following members.

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------|-------------------------------------------------------------------------|
|  | ValueType | Get the value Type (Overrides PropertyType.ValueType .) |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | GetPropertyEdge(IComparable) | Try to find an Edge with a given property value. (Overrides PropertyType.GetPropertyEdge(IComparable) .) |
|  | GetPropertyEdge(T) | Try to find an Edge with a given property value. |
|  | GetPropertyEdges(IComparable) | Try to find all Edge with a given property value. (Overrides PropertyType.GetPropertyEdges(IComparable) .) |
|  | GetPropertyEdges(T) | |
|  | GetPropertyValue | Get property value of a Vertex/Edge (Overrides PropertyType.GetPropertyValue(Int32) .) |
|  | GetPropertyVertex(IComparable, Boolean, Boolean) | (Overrides PropertyType.GetPropertyVertex(IComparable, Boolean, Boolean) .) |
|  | GetPropertyVertex(T, Boolean, Boolean) | Try to find a Vertex with a given property value. |
|  | GetPropertyVertices(Boolean) | Try to find all Vertex with a property value. (Overrides PropertyType.GetPropertyVertices(Boolean) .) |
|  | GetPropertyVertices(IComparable, Boolean) | Try to find all Vertex with a given property value. (Overrides PropertyType.GetPropertyVertices(IComparable, Boolean) .) |
|  | GetPropertyVertices(T, Boolean) | Try to find all Vertex with a given property value. |
|  | HasPropertyValue | Does a certain element (Edge/Vertex) have a property value for this property type (Overrides PropertyType.HasPropertyValue(Int32) .) |
|  | RemovePropertyValue | Remove a property value (Overrides PropertyType.RemovePropertyValue(Int32) .) |
|  | SetPropertyValue(EdgeType, Int32, Int32, IComparable) | (Overrides PropertyType.SetPropertyValue(EdgeType, Int32, Int32, IComparable) .) |
|  | SetPropertyValue(VertexType, Int32, Int32, IComparable) | Sets a property value for an element (Overrides PropertyType.SetPropertyValue(VertexType, Int32, Int32, IComparable) .) |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------------------------|---------------------------------------------------------------------------------|
|  | ToStringDetails(SessionBase, Boolean) | Overloaded. Object details as a string (Defined by Utilities .) |

VelocityDB Class Library

| | | |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------|
|  | ToStringDetails(Schema, TypeVersion, Boolean) | Overloaded. Currently only used by Database Manager (Defined by Utilities.) |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------|

PropertyTypeT(T).PropertyTypeT(T) Methods

The [PropertyTypeT\(T\)](#) generic type exposes the following members.

Methods

| Name | Description |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
|  GetPropertyEdge(IComparable) | Try to find an Edge with a given property value. (Overrides PropertyType.GetPropertyEdge(IComparable) .) |
|  GetPropertyEdge(T) | Try to find an Edge with a given property value. |
|  GetPropertyEdges(IComparable) | Try to find all Edge with a given property value. (Overrides PropertyType.GetPropertyEdges(IComparable) .) |
|  GetPropertyEdges(T) | |
|  GetPropertyValue | Get property value of a Vertex/Edge (Overrides PropertyType.GetPropertyValue(Int32) .) |
|  GetPropertyVertex(IComparable, Boolean, Boolean) | (Overrides PropertyType.GetPropertyVertex(IComparable, Boolean, Boolean) .) |
|  GetPropertyVertex(T, Boolean, Boolean) | Try to find a Vertex with a given property value. |
|  GetPropertyVertices(Boolean) | Try to find all Vertex with a property value. (Overrides PropertyType.GetPropertyVertices(Boolean) .) |
|  GetPropertyVertices(IComparable, Boolean) | Try to find all Vertex with a given property value. (Overrides PropertyType.GetPropertyVertices(IComparable, Boolean) .) |
|  GetPropertyVertices(T, Boolean) | Try to find all Vertex with a given property value. |
|  HasPropertyValue | Does a certain element (Edge/Vertex) have a property value for this property type (Overrides PropertyType.HasPropertyValue(Int32) .) |
|  RemovePropertyValue | Remove a property value (Overrides PropertyType.RemovePropertyValue(Int32) .) |
|  SetPropertyValue(EdgeType, Int32, Int32, IComparable) | (Overrides PropertyType.SetPropertyValue(EdgeType, Int32, Int32, IComparable) .) |
|  SetPropertyValue(VertexType, Int32, Int32, IComparable) | Sets a property value for an element (Overrides PropertyType.SetPropertyValue(VertexType, Int32, Int32, IComparable) .) |

Extension Methods

| Name | Description |

    ?polymorphic : bool
(* Defaults:
    let_polymorphic = defaultArg polymorphic false
*)
-> IEnumerable<Vertex>
```

Parameters

polymorphic (Optional)

Type: [System.Boolean](#)

If true, also look for property value matching vertices of property [VertexType](#) sub classes

Return Value

Type: [IEnumerable\(Vertex\)](#)

Enumeration of matching vertices

See Also

[PropertyTypeT\(T\)Class](#)

[VelocityGraph Namespace](#)

PropertyTypeT(T).GetPropertyVertices Method (IComparable, Boolean)

Try to find all [Vertex](#) with a given property value.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override IEnumerable<Vertex> GetPropertyVertices (
    IComparable value,
    bool polymorphic = false
)
```

VB

```
Public Overrides Function GetPropertyVertices (
    value As IComparable,
    Optional polymorphic As Boolean = false
) As IEnumerable(Of Vertex)
```

C++

```
public:
virtual IEnumerable<Vertex^>^ GetPropertyVertices (
    IComparable^ value,
    bool polymorphic = false
) override
```

F#

```
abstract GetPropertyVertices :
    value : IComparable *
    ?polymorphic : bool
(* Defaults:
    let_polymorphic = defaultArg polymorphic false
*)
-> IEnumerable<Vertex>
override GetPropertyVertices :
    value : IComparable *
    ?polymorphic : bool
(* Defaults:
    let_polymorphic = defaultArg polymorphic false
*)
-> IEnumerable<Vertex>
```

Parameters

value

Type: [System.IComparable](#)

The property value to look for

polymorphic (Optional)

VelocityDB Class Library

Type: [System.Boolean](#)

If true, also look for property value matching vertices of property [VertexType](#) sub classes

Return Value

Type: [IEnumerable\(Vertex\)](#)

Enumeration of matching vertices

Vertex Class

A vertex maintains pointers to both a set of incoming and outgoing edges. The outgoing edges are those edges for which the vertex is the tail. The incoming edges are those edges for which the vertex is the head. Diagrammatically, ---inEdges---> vertex ---outEdges---

Inheritance Hierarchy

[System.Object](#)

[VelocityGraph.Frontenac.Blueprints.DictionaryElement](#)

[VelocityGraph.Element](#)

VelocityGraph.Vertex

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class Vertex : Element, IVertex,
    IElement, IDictionary<string, Object>, ICollection<KeyValuePair<string,
Object>>,
    IEnumerable<KeyValuePair<string, Object>>, IEnumerable,
    IDictionary, ICollection, IEqualityComparer<Vertex>
```

VB

```
Public Class Vertex
    Inherits Element
    Implements IVertex, IElement, IDictionary(Of String, Object),
    ICollection(Of KeyValuePair(Of String, Object)), IEnumerable(Of
KeyValuePair(Of String, Object)),
    IEnumerable, IDictionary, ICollection, IEqualityComparer(Of Vertex)
```

C++

```
public ref class Vertex : public Element,
    IVertex, IElement, IDictionary<String^, Object^>,
    ICollection<KeyValuePair<String^, Object^>>,
    IEnumerable<KeyValuePair<String^, Object^>>,
    IEnumerable, IDictionary, ICollection, IEqualityComparer<Vertex^>
```

F#

```
type Vertex =
    class
        inherit Element
        interface IVertex
        interface IElement
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
```

```

interface IDictionary
interface ICollection
interface IEqualityComparer<Vertex>
end

```

The **Vertex** type exposes the following members.

Constructors

| Name | Description |
|----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Vertex | Normally you should use GetVertex(Int32, Boolean, Boolean) but if you need a reference to a Vertex that has no yet been created, this constructor may be used (but know what you are doing!) |

Properties

| Name | Description |
|--------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Id | An identifier that is unique to its inheriting class. All vertices of a graph must have unique identifiers. All edges of a graph must have unique identifiers. (Overrides DictionaryElement.Id.) |
|  VertexId | Gets the unique id of a vertex |
|  VertexType | Gets the vertex type of this Vertex |

Methods

| Name | Description |
|--------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
|  AddEdge(String, IVertex) | Add an edge from this Vertex to inVertex of edge type looked up from label, if edge type does not yet exist it is created. |
|  AddEdge(EdgeType, Vertex) | Add an edge from this Vertex to inVertex of edge type. |
|  AddEdge(Object, String, IVertex) | Add an edge from this Vertex to inVertex of edge type looked up from label, if edge type does not yet exist it is created. |
|  Equals(Object) | Determines whether the specified Vertex is equal to the current one. (Overrides Object.Equals(Object).) |
|  Equals(Vertex, Vertex) | Determines whether the specified objects are equal. |
|  GetEdges(Direction, String[]) | Return the edges incident to the vertex according to the provided direction and edge labels. |
|  GetEdges(EdgeType, Direction) | Selects all edges from or to this vertex and for the given edge type. |
|  GetHashCode() | Use id as hash code (Overrides Element.GetHashCode().) |
|  GetHashCode(Vertex) | Returns a hash code for the specified object. |

| | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  GetNumberOfEdges(EdgeType, Direction) | Gets the number of edges from or to this vertex and for the given edge type. |
|  GetNumberOfEdges(EdgeType, Vertex, Direction) | Gets the number of edges from or to this vertex for the given edge type and the given other Vertex. |
|  GetProperty(String) | Return the object value associated with the provided string key. If no value exists for that key, return null. (Overrides DictionaryElement.GetProperty(String) .) |
|  GetProperty(PropertyType) | Gets the Value for the given Property id |
|  GetPropertyKeys | Return all the keys associated with the vertex. (Overrides DictionaryElement.GetPropertyKeys() .) |
|  GetVertices | Return the vertices adjacent to the vertex according to the provided direction and edge labels. This method does not remove duplicate vertices (i.e. those vertices that are connected by more than one edge). |
|  Query | Uses DefaultVertexQuery |
|  RelatedVertices | |
|  Remove | Removes this Vertex from the Graph (Overrides DictionaryElement.Remove() .) |
|  RemoveProperty | Un-assigns a key/value property from the vertex. The object value of the removed property is returned. (Overrides DictionaryElement.RemoveProperty(String) .) |
|  SetProperty(String, Object) | Assign a key/value property to the vertex. If a value already exists for this key, then the previous key/value is overwritten. (Overrides DictionaryElement.SetProperty(String, Object) .) |
|  SetProperty(PropertyType, IComparable) | Assign a key/value property to the vertex. If a value already exists for this key, then the previous key/value is overwritten. |
|  ToString | Returns a string that represents the current object. (Overrides Object.ToString() .) |
|  Traverse(Direction, ISet(EdgeType)) | Selects all neighbor Vertices from or to this vertex and for the given edge types. |
|  Traverse(EdgeType, Direction) | Selects all neighbor Vertices from or to this vertex and for the given edge type. |
|  Traverse(Int32, Boolean, Direction, Vertex, ISet(EdgeType), ISet(VertexType), ISet(VertexType), ISet(Vertex), ISet(Vertex), ISet(Edge), ISet(Edge), ISet(PropertyType), ISet(PropertyType), ISet(PropertyType), ISet(PropertyType), Func(Vertex, Boolean), | Traverses graph from this Vertex to a target Vertex using Breadth-first search like in Dijkstra's algorithm |

| | |
|-----------------------------------------------------------------|--|
| Func(Edge, Boolean), Func(List(Edge), Boolean)) | |
|-----------------------------------------------------------------|--|

Extension Methods

| Name | Description |
|------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AreEqual | A standard method for determining if two elements are equal. This method should be used by any Element.equals() implementation to ensure consistent behavior. (Defined by ElementHelpers.) |
|  CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. ElementPropertiesRule that share the same key on the to element are overwritten. (Defined by ElementHelpers.) |
|  GetProperties | Get a clone of the properties of the provided element. In other words, a HashMap is created and filled with the key/values of the element's properties. (Defined by ElementHelpers.) |
|  HaveEqualEdges | Test whether the two vertices have equal edge sets (Defined by VertexHelpers.) |
|  HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers.) |
|  HaveEqualNeighborhood | Test whether the two vertices have equal properties and edge sets. (Defined by VertexHelpers.) |
|  HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers.) |
|  SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers.) |
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers.) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws ArgumentException whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers.) |
|  VertexString | (Defined by StringFactory.) |

Vertex Constructor

Normally you should use [GetVertex\(Int32, Boolean, Boolean\)](#) but if you need a reference to a Vertex that has not yet been created, this constructor may be used (but know what you are doing!)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Vertex(  
    Graph g,  
    VertexType eType,  
    int eId  
)
```

VB

```
Public Sub New (  
    g As Graph,  
    eType As VertexType,  
    eId As Integer  
)
```

C++

```
public:  
Vertex(  
    Graph^ g,  
    VertexType^ eType,  
    int eId  
)
```

F#

```
new :  
    g : Graph *  
    eType : VertexType *  
    eId : int -> Vertex
```

Parameters

g

Type: [VelocityGraph.Graph](#)

the owning graph

eType

Type: [VelocityGraph.VertexType](#)

the type of the Vertex

eId

Type: [System.Int32](#)

the Id of the Vertex

Vertex.Vertex Methods

The [Vertex](#) type exposes the following members.

Methods

| Name | Description |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddEdge(String, IVertex) | Add an edge from this Vertex to inVertex of edge type looked up from label, if edge type does not yet exist it is created. |
|  AddEdge(EdgeType, Vertex) | Add an edge from this Vertex to inVertex of edge type. |
|  AddEdge(Object, String, IVertex) | Add an edge from this Vertex to inVertex of edge type looked up from label, if edge type does not yet exist it is created. |
|  Equals(Object) | Determines whether the specified Vertex is equal to the current one. (Overrides Object.Equals(Object) .) |
|  Equals(Vertex, Vertex) | Determines whether the specified objects are equal. |
|  GetEdges(Direction, String[]) | Return the edges incident to the vertex according to the provided direction and edge labels. |
|  GetEdges(EdgeType, Direction) | Selects all edges from or to this vertex and for the given edge type. |
|  GetHashCode() | Use id as hash code (Overrides Element.GetHashCode() .) |
|  GetHashCode(Vertex) | Returns a hash code for the specified object. |
|  GetNumberOfEdges(EdgeType, Direction) | Gets the number of edges from or to this vertex and for the given edge type. |
|  GetNumberOfEdges(EdgeType, Vertex, Direction) | Gets the number of edges from or to this vertex for the given edge type and the given other Vertex. |
|  GetProperty(String) | Return the object value associated with the provided string key. If no value exists for that key, return null. (Overrides DictionaryElement.GetProperty(String) .) |
|  GetProperty(PropertyType) | Gets the Value for the given Property id |
|  GetPropertyKeys | Return all the keys associated with the vertex. (Overrides DictionaryElement.GetPropertyKeys() .) |
|  GetVertices | Return the vertices adjacent to the vertex according to the provided direction and edge labels. This method does not remove duplicate vertices (i.e. those vertices that are connected by more than one edge). |
|  Query | Uses DefaultVertexQuery |
|  RelatedVertices | |

| | |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Remove | Removes this Vertex from the Graph (Overrides DictionaryElement.Remove() .) |
|  RemoveProperty | Un-assigns a key/value property from the vertex. The object value of the removed property is returned. (Overrides DictionaryElement.RemoveProperty(String) .) |
|  SetProperty(String, Object) | Assign a key/value property to the vertex. If a value already exists for this key, then the previous key/value is overwritten. (Overrides DictionaryElement.SetProperty(String, Object) .) |
|  SetProperty(PropertyType, IComparable) | Assign a key/value property to the vertex. If a value already exists for this key, then the previous key/value is overwritten. |
|  ToString | Returns a string that represents the current object. (Overrides Object.ToString() .) |
|  Traverse(Direction, ISet(EdgeType)) | Selects all neighbor Vertices from or to this vertex and for the given edge types. |
|  Traverse(EdgeType, Direction) | Selects all neighbor Vertices from or to this vertex and for the given edge type. |
|  Traverse(Int32, Boolean, Direction, Vertex, ISet(EdgeType), ISet(VertexType), ISet(VertexType), ISet(Vertex), ISet(Vertex), ISet(Edge), ISet(Edge), ISet(PropertyType), ISet(PropertyType), ISet(PropertyType), ISet(PropertyType), Func(Vertex, Boolean), Func(Edge, Boolean), Func(List(Edge), Boolean)) | Traverses graph from this Vertex to a target Vertex using Breadth-first search like in Dijkstra's algorithm |

Extension Methods

Add an edge from this Vertex to inVertex of edge type looked up from label, if edge type does not yet exist it is created.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEdge AddEdge(  
    string label,  
    IVertex inVertex  
)
```

VB

```
Public Function AddEdge (  
    label As String,  
    inVertex As IVertex  
) As IEdge
```

C++

```
public:  
IEdge^ AddEdge(  
    String^ label,  
    IVertex^ inVertex  
)
```

F#

```
member AddEdge :  
    label : string *  
    inVertex : IVertex -> IEdge
```

Parameters

label

Type: [System.String](#)

The type of edge to create

inVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

The head of the new edge

Return Value

Type: [IEdge](#)

the new edge

VelocityDB Class Library

[AddEdge Overload](#)

[VelocityGraph Namespace](#)

Vertex.AddEdge Method (EdgeType, Vertex)

Add an edge from this Vertex to inVertex of edge type.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Edge AddEdge(  
    EdgeType edgeType,  
    Vertex head  
)
```

VB

```
Public Function AddEdge (  
    edgeType As EdgeType,  
    head As Vertex  
) As Edge
```

C++

```
public:  
Edge^ AddEdge (  
    EdgeType^ edgeType,  
    Vertex^ head  
)
```

F#

```
member AddEdge :  
    edgeType : EdgeType *  
    head : Vertex -> Edge
```

Parameters

edgeType

Type: [VelocityGraph.EdgeType](#)

The type of edge to add

head

Type: [VelocityGraph.Vertex](#)

The head of the new edge

Return Value

Type: [Edge](#)

the new edge

[Vertex Class](#)

VelocityDB Class Library

[AddEdge Overload](#)

[VelocityGraph Namespace](#)

Vertex.AddEdge Method (Object, String, IVertex)

Add an edge from this Vertex to inVertex of edge type looked up from label, if edge type does not yet exist it is created.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEdge AddEdge(  
    Object edgeId,  
    string label,  
    IVertex inVertex  
)
```

VB

```
Public Function AddEdge (  
    edgeId As Object,  
    label As String,  
    inVertex As IVertex  
) As IEdge
```

C++

```
public:  
virtual IEdge^ AddEdge(  
    Object^ edgeId,  
    String^ label,  
    IVertex^ inVertex  
) sealed
```

F#

```
abstract AddEdge :  
    edgeId : Object *  
    label : string *  
    inVertex : IVertex -> IEdge  
override AddEdge :  
    edgeId : Object *  
    label : string *  
    inVertex : IVertex -> IEdge
```

Parameters

edgeId

Type: [System.Object](#)

If not null, this must be a UInt32 to be used as edge id - NOTE: not yet implemented usage

label

Type: [System.String](#)

The type of edge to create

VelocityDB Class Library

inVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

The head of the new edge

Return Value

Type: [IEdge](#)

the new edge

Implements

[IVertex.AddEdge\(Object, String, IVertex\)](#)

Vertex.Equals Method

Overload List

| | Name | Description |
|-----------------------------------------------------------------------------------|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
|  | Equals(Object) | Determines whether the specified Vertex is equal to the current one. (Overrides Object.Equals(Object) .) |
|  | Equals(Vertex, Vertex) | Determines whether the specified objects are equal. |

See Also

[Vertex Class](#)

[VelocityGraph Namespace](#)

Vertex.Equals Method (Object)

Determines whether the specified [Vertex](#) is equal to the current one.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override bool Equals(  
    Object other  
)
```

VB

```
Public Overrides Function Equals (  
    other As Object  
) As Boolean
```

C++

```
public:  
virtual bool Equals(  
    Object^ other  
) override
```

F#

```
abstract Equals :  
    other : Object -> bool  
override Equals :  
    other : Object -> bool
```

Parameters

other

Type: [System.Object](#)

The object to compare with the current object.

Return Value

Type: [Boolean](#)

`true` if the specified object is equal to the current object; otherwise, `false`.

See Also

[Vertex Class](#)

[Equals Overload](#)

[VelocityGraph Namespace](#)

Vertex.Equals Method (Vertex, Vertex)

Determines whether the specified objects are equal.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public bool Equals(  
    Vertex x,  
    Vertex y  
)
```

VB

```
Public Function Equals (  
    x As Vertex,  
    y As Vertex  
) As Boolean
```

C++

```
public:  
virtual bool Equals(  
    Vertex^ x,  
    Vertex^ y  
) sealed
```

F#

```
abstract Equals :  
    x : Vertex *  
    y : Vertex -> bool  
override Equals :  
    x : Vertex *  
    y : Vertex -> bool
```

Parameters

x

Type: [VelocityGraph.Vertex](#)

The first object of type *T* to compare.

y

Type: [VelocityGraph.Vertex](#)

The second object of type *T* to compare.

Return Value

Type: [Boolean](#)

`true` (True in Visual Basic) if the specified objects are equal; otherwise, `false` (False in Visual Basic).

VelocityDB Class Library

Implements

[IEqualityComparer\(T\).Equals\(T, T\)](#)

Vertex.GetEdges Method

Overload List

| | Name | Description |
|-----------------------------------------------------------------------------------|----------------------------------------------|----------------------------------------------------------------------------------------------|
|  | GetEdges(Direction,String[]) | Return the edges incident to the vertex according to the provided direction and edge labels. |
|  | GetEdges(EdgeType,Direction) | Selects all edges from or to this vertex and for the given edge type. |

See Also

[Vertex Class](#)

[VelocityGraph Namespace](#)

Vertex.GetEdges Method (Direction, String[])

Return the edges incident to the vertex according to the provided direction and edge labels.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IEdge> GetEdges (
    Direction direction,
    params string[] labels
)
```

VB

```
Public Function GetEdges (
    direction As Direction,
    ParamArray labels As String()
) As IEnumerable(Of IEdge)
```

C++

```
public:
virtual IEnumerable<IEdge^>^ GetEdges (
    Direction direction,
    ... array<String^>^ labels
) sealed
```

F#

```
abstract GetEdges :
    direction : Direction *
    labels : string[] -> IEnumerable<IEdge>
override GetEdges :
    direction : Direction *
    labels : string[] -> IEnumerable<IEdge>
```

Parameters

direction

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

the direction of the edges to retrieve

labels

Type: [System.String](#)[]

the labels of the edges to retrieve

Return Value

Type: [IEnumerable\(IEdge\)](#)

an IEnumerable of incident edges

VelocityDB Class Library

Implements

[IVertex.GetEdges\(Direction,String\[\]\)](#)

See Also

[Vertex Class](#)

[GetEdges Overload](#)

[VelocityGraph Namespace](#)

Vertex.GetEdges Method (EdgeType, Direction)

Selects all edges from or to this vertex and for the given edge type.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IEdge> GetEdges (  
    EdgeType edgeType,  
    Direction dir  
)
```

VB

```
Public Function GetEdges (  
    edgeType As EdgeType,  
    dir As Direction  
) As IEnumerable(Of IEdge)
```

C++

```
public:  
IEnumerable<IEdge^>^ GetEdges (  
    EdgeType^ edgeType,  
    Direction dir  
)
```

F#

```
member GetEdges :  
    edgeType : EdgeType *  
    dir : Direction -> IEnumerable<IEdge>
```

Parameters

edgeType

Type: [VelocityGraph.EdgeType](#)

the id of an EdgeType

dir

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

direction, one of: Out, In, Both

Return Value

Type: [IEnumerable\(IEdge\)](#)

a set of Edge

[Vertex Class](#)

[VelocityGraph Namespace](#)

Vertex.GetHashCode Method

Use id as hash code

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override int GetHashCode()
```

VB

```
Public Overrides Function GetHashCode As Integer
```

C++

```
public:  
virtual int GetHashCode() override
```

F#

```
abstract GetHashCode : unit -> int  
override GetHashCode : unit -> int
```

Return Value

Type: [Int32](#)

The hash code given by id

See Also

[Vertex Class](#)

[GetHashCode Overload](#)

[VelocityGraph Namespace](#)

Vertex.GetHashCode Method (Vertex)

Returns a hash code for the specified object.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public int GetHashCode(  
    Vertex obj  
)
```

VB

```
Public Function GetHashCode (  
    obj As Vertex  
) As Integer
```

C++

```
public:  
virtual int GetHashCode(  
    Vertex^ obj  
) sealed
```

F#

```
abstract GetHashCode :  
    obj : Vertex -> int  
override GetHashCode :  
    obj : Vertex -> int
```

Parameters

obj

Type: [VelocityGraph.Vertex](#)

The [Object](#) for which a hash code is to be returned.

Return Value

Type: [Int32](#)

A hash code for the specified object.

Implements

[IEqualityComparer\(T\).GetHashCode\(T\)](#)

Exceptions

| Exception | Condition |
|---------------------------------------|----------------------------------------------------------------------------------------------------------|
| ArgumentNullException | The type of <i>obj</i> is a reference type and <i>obj</i> is a null reference (Nothing in Visual Basic). |

Vertex.GetNumberOfEdges Method

Overload List

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
|  | GetNumberOfEdges(EdgeType, Direction) | Gets the number of edges from or to this vertex and for the given edge type. |
|  | GetNumberOfEdges(EdgeType, Vertex, Direction) | Gets the number of edges from or to this vertex for the given edge type and the given other Vertex. |

See Also

[Vertex Class](#)

[VelocityGraph Namespace](#)

Vertex.GetNumberOfEdges Method (EdgeType, Direction)

Gets the number of edges from or to this vertex and for the given edge type.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public long GetNumberOfEdges (
    EdgeType edgeType,
    Direction dir
)
```

VB

```
Public Function GetNumberOfEdges (
    edgeType As EdgeType,
    dir As Direction
) As Long
```

C++

```
public:
long long GetNumberOfEdges (
    EdgeType^ edgeType,
    Direction dir
)
```

F#

```
member GetNumberOfEdges :
    edgeType : EdgeType *
    dir : Direction -> int64
```

Parameters

edgeType

Type: [VelocityGraph.EdgeType](#)

an EdgeType

dir

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

direction, one of: Out, In, Both

Return Value

Type: [Int64](#)

The number of edges.

See Also

[Vertex Class](#)

VelocityDB Class Library

[GetNumberOfEdges Overload](#)

[VelocityGraph Namespace](#)

Vertex.GetNumberOfEdges Method (EdgeType, Vertex, Direction)

Gets the number of edges from or to this vertex for the given edge type and the given other Vertex.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public long GetNumberOfEdges (  
    EdgeType edgeType,  
    Vertex headVertex,  
    Direction dir  
)
```

VB

```
Public Function GetNumberOfEdges (  
    edgeType As EdgeType,  
    headVertex As Vertex,  
    dir As Direction  
) As Long
```

C++

```
public:  
long long GetNumberOfEdges (  
    EdgeType^ edgeType,  
    Vertex^ headVertex,  
    Direction dir  
)
```

F#

```
member GetNumberOfEdges :  
    edgeType : EdgeType *  
    headVertex : Vertex *  
    dir : Direction -> int64
```

Parameters

edgeType

Type: [VelocityGraph.EdgeType](#)

an EdgeType

headVertex

Type: [VelocityGraph.Vertex](#)

Vertex at other end of the edge

dir

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

direction, one of: Out, In, Both

VelocityDB Class Library

Return Value

Type: [Int64](#)

The number of edges.

Vertex.GetProperty Method

Overload List

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | GetProperty(String) | Return the object value associated with the provided string key. If no value exists for that key, return null. (Overrides DictionaryElement.GetProperty(String) .) |
|  | GetProperty(PropertyType) | Gets the Value for the given Property id |

See Also

[Vertex Class](#)

[VelocityGraph Namespace](#)

Vertex.GetProperty Method (String)

Return the object value associated with the provided string key. If no value exists for that key, return null.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override Object GetProperty(  
    string key  
)
```

VB

```
Public Overrides Function GetProperty (  
    key As String  
) As Object
```

C++

```
public:  
virtual Object^ GetProperty(  
    String^ key  
) override
```

F#

```
abstract GetProperty :  
    key : string -> Object  
override GetProperty :  
    key : string -> Object
```

Parameters

key

Type: [System.String](#)

the key of the key/value property

Return Value

Type: [Object](#)

the object value related to the string key

Implements

[IElement.GetProperty\(String\)](#)

[IElement.GetProperty\(String\)](#)

See Also

[Vertex Class](#)

VelocityDB Class Library

[VelocityGraph Namespace](#)

Vertex.GetProperty Method (PropertyType)

Gets the Value for the given Property id

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Object GetProperty(  
    PropertyType property  
)
```

VB

```
Public Function GetProperty (  
    property As PropertyType  
) As Object
```

C++

```
public:  
Object^ GetProperty(  
    PropertyType^ property  
)
```

F#

```
member GetProperty :  
    property : PropertyType -> Object
```

Parameters

property

Type: [VelocityGraph.PropertyType](#)

Property type identifier.

Return Value

Type: [Object](#)

the property value

See Also

[Vertex Class](#)

[GetProperty Overload](#)

[VelocityGraph Namespace](#)

Vertex.GetPropertyKeys Method

Return all the keys associated with the vertex.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override IEnumerable<string> GetPropertyKeys ()
```

VB

```
Public Overrides Function GetPropertyKeys As IEnumerable(Of String)
```

C++

```
public:  
virtual IEnumerable<String^>^ GetPropertyKeys () override
```

F#

```
abstract GetPropertyKeys : unit -> IEnumerable<string>  
override GetPropertyKeys : unit -> IEnumerable<string>
```

Return Value

Type: [IEnumerable\(String\)](#)

the set of all string keys associated with the vertex

Implements

[IElement.GetPropertyKeys\(\)](#)

[IElement.GetPropertyKeys\(\)](#)

See Also

[Vertex Class](#)

[VelocityGraph Namespace](#)

Vertex.GetVertices Method

Return the vertices adjacent to the vertex according to the provided direction and edge labels. This method does not remove duplicate vertices (i.e. those vertices that are connected by more than one edge).

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IVertex> GetVertices (
    Direction direction,
    params string[] labels
)
```

VB

```
Public Function GetVertices (
    direction As Direction,
    ParamArray labels As String()
) As IEnumerable(Of IVertex)
```

C++

```
public:
virtual IEnumerable<IVertex^>^ GetVertices (
    Direction direction,
    ... array<String^>^ labels
) sealed
```

F#

```
abstract GetVertices :
    direction : Direction *
    labels : string[] -> IEnumerable<IVertex>
override GetVertices :
    direction : Direction *
    labels : string[] -> IEnumerable<IVertex>
```

Parameters

direction

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

the direction of the edges of the adjacent vertices

labels

Type: [System.String\[\]](#)

the labels of the edges of the adjacent vertices

VelocityDB Class Library

Return Value

Type: [IEnumerable\(IVertex\)](#)

an IEnumerable of adjacent vertices

Implements

[IVertex.GetVertices\(Direction,String\[\]\)](#)

See Also

[Vertex Class](#)

[VelocityGraph Namespace](#)

Vertex.Query Method

Uses [DefaultVertexQuery](#)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IVertexQuery Query()
```

VB

```
Public Function Query As IVertexQuery
```

C++

```
public:  
virtual IVertexQuery^ Query() sealed
```

F#

```
abstract Query : unit -> IVertexQuery  
override Query : unit -> IVertexQuery
```

Return Value

Type: [IVertexQuery](#)

Query interface

Implements

[IVertex.Query\(\)](#)

See Also

[Vertex Class](#)

[VelocityGraph Namespace](#)

Vertex.RelatedVertices Method

[Missing <summary> documentation for "M:VelocityGraph.Vertex.RelatedVertices(VelocityGraph.Frontenac.Blueprints.Direction,System.Collections.Generic.ISet{VelocityGraph.EdgeType})"]

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public List<Vertex> RelatedVertices (
    Direction dir = Direction.Both,
    ISet<EdgeType> edgeTypesToTraverse = null
)
```

VB

```
Public Function RelatedVertices (
    Optional dir As Direction = Direction.Both,
    Optional edgeTypesToTraverse As ISet(Of EdgeType) = Nothing
) As List(Of Vertex)
```

C++

```
public:
List<Vertex^>^ RelatedVertices(
    Direction dir = Direction::Both,
    ISet<EdgeType^>^ edgeTypesToTraverse = nullptr
)
```

F#

```
member RelatedVertices :
    ?dir : Direction *
    ?edgeTypesToTraverse : ISet<EdgeType>
(* Defaults:
    let_dir = defaultArg dir Direction.Both
    let_edgeTypesToTraverse = defaultArg edgeTypesToTraverse null
*)
-> List<Vertex>
```

Parameters

dir (Optional)

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

[Missing <param name="dir"/> documentation for "M:VelocityGraph.Vertex.RelatedVertices(VelocityGraph.Frontenac.Blueprints.Direction,System.Collections.Generic.ISet{VelocityGraph.EdgeType})"]

edgeTypesToTraverse (Optional)

Type: [System.Collections.Generic.ISet\(EdgeType\)](#)

[Missing <param name="edgeTypesToTraverse"/> documentation for "M:VelocityGraph.Vertex.RelatedVertices(VelocityGraph.Frontenac.Blueprints.Direction,System.Collections.Generic.ISet{VelocityGraph.EdgeType})"]

Return Value

Type: [List\(Vertex\)](#)

[Missing <returns> documentation for "M:VelocityGraph.Vertex.RelatedVertices(VelocityGraph.Frontenac.Blueprints.Direction,System.Collections.Generic.ISet{VelocityGraph.EdgeType})"]

[VelocityGraph Namespace](#)

Vertex.RemoveProperty Method

Un-assigns a key/value property from the vertex. The object value of the removed property is returned.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override Object RemoveProperty(  
    string key  
)
```

VB

```
Public Overrides Function RemoveProperty (  
    key As String  
) As Object
```

C++

```
public:  
virtual Object^ RemoveProperty(  
    String^ key  
) override
```

F#

```
abstract RemoveProperty :  
    key : string -> Object  
override RemoveProperty :  
    key : string -> Object
```

Parameters

key

Type: [System.String](#)

the key of the property to remove from the vertex

Return Value

Type: [Object](#)

the object value associated with that key prior to removal

Implements

[IElement.RemoveProperty\(String\)](#)

[IElement.RemoveProperty\(String\)](#)

[VelocityGraph Namespace](#)

Vertex.ToString Method

Returns a string that represents the current object.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override string ToString()
```

VB

```
Public Overrides Function ToString As String
```

C++

```
public:  
virtual String^ ToString() override
```

F#

```
abstract ToString : unit -> string  
override ToString : unit -> string
```

Return Value

Type: [String](#)

A string that represents the current object.

Vertex.Traverse Method

Overload List

| | Name | Description |
|---|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| ⇒ | Traverse(Direction, ISet(EdgeType)) | Selects all neighbor Vertices from or to this vertex and for the given edge types. |
| ⇒ | Traverse(EdgeType, Direction) | Selects all neighbor Vertices from or to this vertex and for the given edge type. |
| ⇒ | Traverse(Int32, Boolean, Direction, Vertex, ISet(EdgeType), ISet(VertexType), ISet(VertexType), ISet(Vertex), ISet(Vertex), ISet(Edge), ISet(Edge), ISet(PropertyType), ISet(PropertyType), ISet(PropertyType), ISet(PropertyType), Func(Vertex, Boolean), Func(Edge, Boolean), Func(List(Edge), Boolean)) | Traverses graph from this Vertex to a target Vertex using Breadth-first search like in Dijkstra's algorithm |

[Vertex Class](#)

[VelocityGraph Namespace](#)

Vertex.Traverse Method (Direction, ISet(EdgeType))

Selects all neighbor Vertices from or to this vertex and for the given edge types.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Dictionary<Vertex, HashSet<Edge>> Traverse (  
    Direction dir,  
    ISet<EdgeType> edgeTypesToTraverse = null  
)
```

VB

```
Public Function Traverse (  
    dir As Direction,  
    Optional edgeTypesToTraverse As ISet(Of EdgeType) = Nothing  
) As Dictionary(Of Vertex, HashSet(Of Edge))
```

C++

```
public:  
Dictionary<Vertex^, HashSet<Edge^>>^ Traverse (  
    Direction dir,  
    ISet<EdgeType^>^ edgeTypesToTraverse = nullptr  
)
```

F#

```
member Traverse :  
    dir : Direction *  
    ?edgeTypesToTraverse : ISet<EdgeType>  
(* Defaults:  
    let _edgeTypesToTraverse = defaultArg edgeTypesToTraverse null  
)  
-> Dictionary<Vertex, HashSet<Edge>>
```

Parameters

dir

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

Direction to traverse edges

edgeTypesToTraverse (Optional)

Type: [System.Collections.Generic.ISet\(EdgeType\)](#)

the type of edges to follow, by default null which means follow all edge types

Return Value

Type: [Dictionary\(Vertex, HashSet\(Edge\)\)](#)

All paths to neighbor vertices

VelocityDB Class Library

let_validateEdge = defaultArg validateEdge null
let_validateEdges = defaultArg validateEdges null
*)
-> List<List<Edge>>
```

Parameters

maxHops

Type: [System.Int32](#)

maximum number of hops from this Vertex

all (Optional)

Type: [System.Boolean](#)

find or not find all paths to goal Vertex

dir (Optional)

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

Direction to traverse edges

toVertex (Optional)

Type: [VelocityGraph.Vertex](#)

the goal Vertex. If null, finds all paths

edgeTypesToTraverse (Optional)

Type: [System.Collections.Generic.ISet\(EdgeType\)](#)

the type of edges to follow, by default null which means follow all edge types

includedVertexTypes (Optional)

Type: [System.Collections.Generic.ISet\(VertexType\)](#)

the type of vertices's to follow, by default null which means follow all vertex types

excludedVertexTypes (Optional)

Type: [System.Collections.Generic.ISet\(VertexType\)](#)

the type of vertices's not to follow, by default null

includedVertices (Optional)

Type: [System.Collections.Generic.ISet\(Vertex\)](#)

one or more Vertex instances that MUST be in the path for the path to be traversed i.e. if a path does exist to the specified toVertex, but does not include all the instances in includedVertices set, the Traverse method will exclude that path

excludedVertices (Optional)

Type: [System.Collections.Generic.ISet\(Vertex\)](#)

one or more Vertex instances that MUST NOT be in the path for the path to be traversed i.e. if a path does exist to the specified toVertex, but does include any of the instances in includedVertices set, the Traverse method will exclude that path

includedEdges (Optional)

Type: [System.Collections.Generic.ISet\(Edge\)](#)

one or more Edge instances that MUST be in the path for the path to be traversed i.e. if a path does exist to the specified toVertex, but does not include all the instances in includedEdges set, the Traverse method will exclude that path

excludedEdges (Optional)

Type: [System.Collections.Generic.ISet\(Edge\)](#)

one or more Edge instances that MUST NOT be in the path for the path to be traversed i.e. if a path does exist to the specified toVertex, but does include any of the instances in includedEdges set, the Traverse method will exclude that path

includedVertexProperty (Optional)

Type: [System.Collections.Generic.ISet\(PropertyType\)](#)

One or more Vertex property types that MUST be in the path for the path to be accepted i.e. if a path does exist to the specified toVertex, but does not include all of the Vertex properties in the set, the Traverse method will exclude that path

excludedVertexProperty (Optional)

Type: [System.Collections.Generic.ISet\(PropertyType\)](#)

One or more Vertex property types that MUST NOT be in the path for the path to be accepted i.e. if a path does exist to the specified toVertex, but does include any of the Vertex properties in the set, the Traverse method will exclude that path

includedEdgeProperty (Optional)

Type: [System.Collections.Generic.ISet\(PropertyType\)](#)

One or more Vertex property types that MUST be in the path for the path to be accepted i.e. if a path does exist to the specified toVertex, but does not include all of the Vertex properties in the set, the Traverse method will exclude that path

excludedEdgeProperty (Optional)

Type: [System.Collections.Generic.ISet\(PropertyType\)](#)

One or more Edge property types that MUST NOT be in the path for the path to be accepted i.e. if a path does exist to the specified toVertex, but does include any of the Edge properties in the set, the Traverse method will exclude that path

validateVertex (Optional)

Type: [System.Func\(Vertex, Boolean\)](#)

A function that will be called before accepting a Vertex in path to toVertex. If function returns true then this vertex is accepted in path; otherwise vertex is rejected

validateEdge (Optional)

Type: [System.Func\(Edge, Boolean\)](#)

A function that will be called before accepting an Edge in path to toVertex. If function returns true then this Edge is accepted in path; otherwise edge is rejected

validateEdges (Optional)

Type: [System.Func\(List\(Edge\), Boolean\)](#)

A function that will be called before accepting a candidate Edges list in path to toVertex. If function returns true then this Edge list is accepted in path; otherwise edge list is rejected

Return Value

Type: [List\(List\(Edge\)\)](#)

List of paths to goal Vertex

[Vertex Class](#)

[Traverse Overload](#)

[VelocityGraph Namespace](#)

VertexType Class

All vertices have a type that is identified as a `VertexType`. Each `VertexType` have a name, can be persisted and tracks all vertices of its type. The vertex type also knows about properties used by its type.

Inheritance Hierarchy

[System.Object](#)

[VelocityDb.OptimizedPersistable](#)

VelocityGraph.VertexType

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
[SerializableAttribute]
public class VertexType : OptimizedPersistable
```

VB

```
<SerializableAttribute>
Public Class VertexType
    Inherits OptimizedPersistable
```

C++

```
[SerializableAttribute]
public ref class VertexType : public OptimizedPersistable
```

F#

```
[<SerializableAttribute>]
type VertexType =
    class
        inherit OptimizedPersistable
    end
```

The **VertexType** type exposes the following members.

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------|----------------------------------------------------------------------|
|  | EdgeTypes | All edge types connected with this vertex type. |
|  | MyGraph | Graph for which this VertexType belongs to |
|  | SubTypes | Sub types of this VertexType |
|  | TypeId | Get the unique id of the vertex type. |
|  | TypeName | Gets the name of this VertexType |

Methods

| Name | Description |
|---------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CountVertices | Count of vertices |
| FindProperty | Gets the associated PropertyType given a property type name or null if such property type doesn't exist. |
| GetEdges(EdgeType, Direction) | Enumerates edges connected with this vertex type |
| GetEdges(Vertex, Direction) | Get all edges found from a given Vertex |
| GetEdges(EdgeType, Vertex, Direction, Vertex) | Get all edges found between two vertices |
| GetNumberOfEdges(EdgeType, Direction) | Get the number of edges of a certain type that can be found and an edge direction |
| GetNumberOfEdges(EdgeType, Int32, Direction) | Get the number of edges of a certain type that can be found associated with a vertex id and an edge direction |
| GetNumberOfEdges(EdgeType, Int32, Int32, Direction) | Get the number of edges of a certain type that can be found associated with a vertex id, another vertex id at other end and an edge direction |
| GetPropertyKeys | Return all the keys associated with the vertex type. |
| GetPropertyTypes | Return all the property types associated with vertex type. |
| GetPropertyValue | Get the property value for a Vertex |
| GetTopNumberOfEdges | Get the top vertices with the most number of edges of the given edge type |
| GetVertex | Instantiates a Vertex if it exist |
| GetVertexIds | Get existing Vertex ids for this type |
| GetVertices(Boolean) | Enumerates all vertices for the given type |
| GetVertices(EdgeType, Vertex, Direction) | Get an enumeration of existing vertices of this type found by following an edge type |
| NewProperty | Creates a new Property. |
| NewVertex | Creates a new Vertex |
| Remove | Removes this VertexType from a graph. An exception is thrown if the VertexType is in use. |
| RemoveVertex | Removes a vertex from this type and graph |
| SetPropertyValue | Sets a property value |
| ToString | Displays class name plus object id (Overrides OptimizedPersistable.ToString() .) |
| Unpersist | Removes an object from the persistent store and makes the object a transient object. It does not automatically make referenced objects unpersisted. Best way to do so is to override |

| | | |
|--|--|----------------------------------------------------------------------------------------------------------------------|
| | | this virtual function in your own classes. (Overrides OptimizedPersistable.Unpersist(SessionBase).) |
|--|--|----------------------------------------------------------------------------------------------------------------------|

Extension Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------|
|  | ToStringDetails(SessionBase, Boolean) | Overloaded. Object details as a string (Defined by Utilities.) |
|  | ToStringDetails(Schema, TypeVersion, Boolean) | Overloaded. Currently only used by Database Manager (Defined by Utilities.) |

IEnumerable<IEdge^>^ GetEdges (  
    EdgeType^ etype,  
    Direction dir  
)
```

F#

```
member GetEdges :  
    etype : EdgeType *  
    dir : Direction -> IEnumerable<IEdge>
```

Parameters

etype

Type: [VelocityGraph.EdgeType](#)

A type of edge type to look for

dir

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

Direction of edge

Return Value

Type: [IEnumerable\(IEdge\)](#)

[Missing <returns> documentation for

"M:VelocityGraph.VertexType.GetEdges(VelocityGraph.EdgeType,VelocityGraph.Frontenac.Blueprints.Direction)"]

VelocityDB Class Library

[VelocityGraph Namespace](#)

VertexType.GetEdges Method (Vertex, Direction)

Get all edges found from a given [Vertex](#)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IEdge> GetEdges (  
    Vertex vertex1,  
    Direction dir  
)
```

VB

```
Public Function GetEdges (  
    vertex1 As Vertex,  
    dir As Direction  
) As IEnumerable(Of IEdge)
```

C++

```
public:  
IEnumerable<IEdge^>^ GetEdges (  
    Vertex^ vertex1,  
    Direction dir  
)
```

F#

```
member GetEdges :  
    vertex1 : Vertex *  
    dir : Direction -> IEnumerable<IEdge>
```

Parameters

vertex1

Type: [VelocityGraph.Vertex](#)

A [Vertex](#) id

dir

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

follow edges in this direction

Return Value

Type: [IEnumerable\(IEdge\)](#)

an enumeration of edges

See Also

[VertexType Class](#)

VelocityDB Class Library

[GetEdges Overload](#)

[VelocityGraph Namespace](#)

VertexType.GetEdges Method (EdgeType, Vertex, Direction, Vertex)

Get all edges found between two vertices

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IEdge> GetEdges (
    EdgeType edgeType,
    Vertex vertex1,
    Direction dir,
    Vertex vertex2 = null
)
```

VB

```
Public Function GetEdges (
    edgeType As EdgeType,
    vertex1 As Vertex,
    dir As Direction,
    Optional vertex2 As Vertex = Nothing
) As IEnumerable(Of IEdge)
```

C++

```
public:
IEnumerable<IEdge^>^ GetEdges (
    EdgeType^ edgeType,
    Vertex^ vertex1,
    Direction dir,
    Vertex^ vertex2 = nullptr
)
```

F#

```
member GetEdges :
    edgeType : EdgeType *
    vertex1 : Vertex *
    dir : Direction *
    ?vertex2 : Vertex
(* Defaults:
    let _vertex2 = defaultArg vertex2 null
*)
-> IEnumerable<IEdge>
```

Parameters

edgeType

Type: [VelocityGraph.EdgeType](#)

Restrict to this type of edge

VelocityDB Class Library

vertex1

Type: [VelocityGraph.Vertex](#)

Start [Vertex](#)

dir

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

Follow edges in this direction

vertex2 (Optional)

Type: [VelocityGraph.Vertex](#)

End [Vertex](#)

Return Value

Type: [IEnumerable\(IEdge\)](#)

An enumeration of edges

[VelocityGraph Namespace](#)

VertexType.GetNumberOfEdges Method (EdgeType, Direction)

Get the number of edges of a certain type that can be found and an edge direction

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public long GetNumberOfEdges (  
    EdgeType etype,  
    Direction dir  
)
```

VB

```
Public Function GetNumberOfEdges (  
    etype As EdgeType,  
    dir As Direction  
) As Long
```

C++

```
public:  
long long GetNumberOfEdges (  
    EdgeType^ etype,  
    Direction dir  
)
```

F#

```
member GetNumberOfEdges :  
    etype : EdgeType *  
    dir : Direction -> int64
```

Parameters

etype

Type: [VelocityGraph.EdgeType](#)

Use this type of edge

dir

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

Edge direction to follow

Return Value

Type: [Int64](#)

Number of edges found

See Also

VertexType.GetPropertyKeys Method

Return all the keys associated with the vertex type.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<string> GetPropertyKeys ()
```

VB

```
Public Function GetPropertyKeys As IEnumerable (Of String)
```

C++

```
public:  
IEnumerable<String^>^ GetPropertyKeys ()
```

F#

```
member GetPropertyKeys : unit -> IEnumerable<string>
```

Return Value

Type: [IEnumerable\(String\)](#)

the set of all string keys associated with the vertex type

See Also

[VertexType Class](#)

[VelocityGraph Namespace](#)

VertexType.GetPropertyTypes Method

Return all the property types associated with vertex type.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<PropertyType> GetPropertyTypes ()
```

VB

```
Public Function GetPropertyTypes As IEnumerable (Of PropertyType)
```

C++

```
public:  
IEnumerable<PropertyType^> GetPropertyTypes ()
```

F#

```
member GetPropertyTypes : unit -> IEnumerable<PropertyType>
```

Return Value

Type: [IEnumerable\(PropertyType\)](#)

the set of property types associated with the vertex type

See Also

[VertexType Class](#)

[VelocityGraph Namespace](#)

VertexType.GetPropertyValue Method

Get the property value for a [Vertex](#)

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Object GetPropertyValue(  
    int vertexId,  
    PropertyType propertyType  
)
```

VB

```
Public Function GetPropertyValue (  
    vertexId As Integer,  
    propertyType As PropertyType  
) As Object
```

C++

```
public:  
Object^ GetPropertyValue (  
    int vertexId,  
    PropertyType^ propertyType  
)
```

F#

```
member GetPropertyValue :  
    vertexId : int *  
    propertyType : PropertyType -> Object
```

Parameters

vertexId

Type: [System.Int32](#)

Id of [Vertex](#)

propertyType

Type: [VelocityGraph.PropertyType](#)

Type of property

Return Value

Type: [Object](#)

[Missing <returns> documentation for

"M:VelocityGraph.VertexType.GetPropertyValue(System.Int32,VelocityGraph.PropertyType)"]

VelocityDB Class Library

See Also

[VertexType Class](#)

[VelocityGraph Namespace](#)

VertexType.GetTopNumberOfEdges Method

Get the top vertices with the most number of edges of the given edge type

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Vertex[] GetTopNumberOfEdges (  
    EdgeType etype,  
    int howMany,  
    Direction dir  
)
```

VB

```
Public Function GetTopNumberOfEdges (  
    etype As EdgeType,  
    howMany As Integer,  
    dir As Direction  
) As Vertex()
```

C++

```
public:  
array<Vertex^>^ GetTopNumberOfEdges (  
    EdgeType^ etype,  
    int howMany,  
    Direction dir  
)
```

F#

```
member GetTopNumberOfEdges :  
    etype : EdgeType *  
    howMany : int *  
    dir : Direction -> Vertex[]
```

Parameters

etype

Type: [VelocityGraph.EdgeType](#)

The edge type to look for

howMany

Type: [System.Int32](#)

How many top ones to collect

dir

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

What end of edges to look at

VelocityDB Class Library

Return Value

Type: [Vertex](#)[]

Array of Vertices with the most edges of the given edge type

See Also

[VertexType Class](#)

[VelocityGraph Namespace](#)

VertexType.GetVertex Method

Instantiates a Vertex if it exist

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Vertex GetVertex(  
    int vertexId,  
    bool polymorphic = false,  
    bool errorIfNotFound = true  
)
```

VB

```
Public Function GetVertex (  
    vertexId As Integer,  
    Optional polymorphic As Boolean = false,  
    Optional errorIfNotFound As Boolean = true  
) As Vertex
```

C++

```
public:  
Vertex^ GetVertex(  
    int vertexId,  
    bool polymorphic = false,  
    bool errorIfNotFound = true  
)
```

F#

```
member GetVertex :  
    vertexId : int *  
    ?polymorphic : bool *  
    ?errorIfNotFound : bool  
(* Defaults:  
    let _polymorphic = defaultArg polymorphic false  
    let _errorIfNotFound = defaultArg errorIfNotFound true  
)  
-> Vertex
```

Parameters

vertexId

Type: [System.Int32](#)

id of Vertex we are looking for

polymorphic (Optional)

Type: [System.Boolean](#)

VelocityDB Class Library

If true and id isn't found in this VertexType continue search into sub types

errorIfNotFound (Optional)

Type: [System.Boolean](#)

Indicate what to do if Vertex does not exist

Return Value

Type: [Vertex](#)

A Vertex or null

See Also

[VertexType Class](#)

[VelocityGraph Namespace](#)

VertexType.GetVerticeIds Method

Get existing [Vertex](#) ids for this type

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<int> GetVerticeIds ()
```

VB

```
Public Function GetVerticeIds As IEnumerable (Of Integer)
```

C++

```
public:  
IEnumerable<int>^ GetVerticeIds ()
```

F#

```
member GetVerticeIds : unit -> IEnumerable<int>
```

Return Value

Type: [IEnumerable\(Int32\)](#)

An enumeration of vertex ids

See Also

[VertexType Class](#)

[VelocityGraph Namespace](#)

VertexType.GetVertices Method

Overload List

| | Name | Description |
|-----------------------------------------------------------------------------------|----------------------------------------------------------|--------------------------------------------------------------------------------------|

VertexType.GetVertices Method (Boolean)

Enumerates all vertices for the given type

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<Vertex> GetVertices(  
    bool polymorphic = false  
)
```

VB

```
Public Function GetVertices (  
    Optional polymorphic As Boolean = false  
) As IEnumerable(Of Vertex)
```

C++

```
public:  
IEnumerable<Vertex^> GetVertices(  
    bool polymorphic = false  
)
```

F#

```
member GetVertices :  
    ?polymorphic : bool  
(* Defaults:  
    let_polymorphic = defaultArg polymorphic false  
*)  
-> IEnumerable<Vertex>
```

Parameters

polymorphic (Optional)

Type: [System.Boolean](#)

If true, also include all vertices of sub types of this VertexType

Return Value

Type: [IEnumerable\(Vertex\)](#)

Enumeration of vertices

See Also

[VertexType Class](#)

[GetVertices Overload](#)

[VelocityGraph Namespace](#)

VertexType.GetVertices Method (EdgeType, Vertex, Direction)

Get an enumeration of existing vertices of this type found by following an edge type

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IVertex> GetVertices (  
    EdgeType etype,  
    Vertex vertex1,  
    Direction dir  
)
```

VB

```
Public Function GetVertices (  
    etype As EdgeType,  
    vertex1 As Vertex,  
    dir As Direction  
) As IEnumerable(Of IVertex)
```

C++

```
public:  
IEnumerable<IVertex^> GetVertices (  
    EdgeType^ etype,  
    Vertex^ vertex1,  
    Direction dir  
)
```

F#

```
member GetVertices :  
    etype : EdgeType *  
    vertex1 : Vertex *  
    dir : Direction -> IEnumerable<IVertex>
```

Parameters

etype

Type: [VelocityGraph.EdgeType](#)

Edge type to follow

vertex1

Type: [VelocityGraph.Vertex](#)

Vertex to start from

dir

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

Edge direction to follow

VelocityDB Class Library

Return Value

Type: [IEnumerable\(IVertex\)](#)
an enumeration of vertices

See Also

[VelocityGraph Namespace](#)

VertexType.NewProperty Method

Creates a new Property.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

```
C#  
public PropertyType NewProperty(  
    string name,  
    DataType dt,  
    PropertyKind kind  
)
```

```
VB  
Public Function NewProperty (  
    name As String,  
    dt As DataType,  
    kind As PropertyKind  
) As PropertyType
```

```
C++  
public:  
PropertyType^ NewProperty(  
    String^ name,  
    DataType dt,  
    PropertyKind kind  
)
```

```
F#  
member NewProperty :  
    name : string *  
    dt : DataType *  
    kind : PropertyKind -> PropertyType
```

Parameters

name

Type: [System.String](#)

Unique name for the new Property.

dt

Type: [VelocityGraph.DataType](#)

Data type for the new Property.

kind

Type: [VelocityGraph.PropertyKind](#)

Property kind.

VelocityDB Class Library

Return Value

Type: [PropertyType](#)

Unique Property identifier.

[VertexType Class](#)

[VelocityGraph Namespace](#)

VertexType.NewVertex Method

Creates a new Vertex

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Vertex NewVertex(  
    int vId = 0  
)
```

VB

```
Public Function NewVertex (  
    Optional vId As Integer = 0  
) As Vertex
```

C++

```
public:  
Vertex^ NewVertex(  
    int vId = 0  
)
```

F#

```
member NewVertex :  
    ?vId : int  
(* Defaults:  
    let _vId = defaultArg vId 0  
*)  
-> Vertex
```

Parameters

vId (Optional)

Type: [System.Int32](#)

Optionally provide the Vertex id to use.

Return Value

Type: [Vertex](#)

The newly created [Vertex](#)

See Also

[VertexType Class](#)

[VelocityGraph Namespace](#)

VertexType.Remove Method

Removes this [VertexType](#) from a graph. An exception is thrown if the [VertexType](#) is in use.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void Remove ()
```

VB

```
Public Sub Remove
```

C++

```
public:  
void Remove ()
```

F#

```
member Remove : unit -> unit
```

See Also

[VelocityGraph Namespace](#)

VertexType.RemoveVertex Method

Removes a vertex from this type and graph

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void RemoveVertex(  
    Vertex vertex  
)
```

VB

```
Public Sub RemoveVertex (  
    vertex As Vertex  
)
```

C++

```
public:  
void RemoveVertex(  
    Vertex^ vertex  
)
```

F#

```
member RemoveVertex :  
    vertex : Vertex -> unit
```

Parameters

vertex

Type: [VelocityGraph.Vertex](#)

The vertex to remove

See Also

[VertexType Class](#)

[VelocityGraph Namespace](#)

VertexType.SetPropertyValue Method

Sets a property value

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void SetPropertyValue(  
    VertexType vt,  
    int vertexId,  
    PropertyType propertyType,  
    IComparable v  
)
```

VB

```
Public Sub SetPropertyValue (  
    vt As VertexType,  
    vertexId As Integer,  
    propertyType As PropertyType,  
    v As IComparable  
)
```

C++

```
public:  
void SetPropertyValue(  
    VertexType^ vt,  
    int vertexId,  
    PropertyType^ propertyType,  
    IComparable^ v  
)
```

F#

```
member SetPropertyValue :  
    vt : VertexType *  
    vertexId : int *  
    propertyType : PropertyType *  
    v : IComparable -> unit
```

Parameters

vt

Type: [VelocityGraph.VertexType](#)

[Missing <param name="vt"/> documentation for

"M:VelocityGraph.VertexType.SetPropertyValue(VelocityGraph.VertexType,System.Int32,VelocityGraph.PropertyType,System.IComparable)"]

vertexId

VelocityDB Class Library

Type: [System.Int32](#)

Id of [Vertex](#) for which to set property value

propertyType

Type: [VelocityGraph.PropertyType](#)

The type of property to set

v

Type: [System.IComparable](#)

the value to set the property to

See Also

[VertexType Class](#)

[VelocityGraph Namespace](#)

VertexType.ToString Method

Displays class name plus object id

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override string ToString()
```

VB

```
Public Overrides Function ToString As String
```

C++

```
public:  
virtual String^ ToString() override
```

F#

```
abstract ToString : unit -> string  
override ToString : unit -> string
```

Return Value

Type: [String](#)

A [String](#) containing class name and object id.

See Also

[VertexType Class](#)

[VelocityGraph Namespace](#)

VertexType.Unpersist Method

Removes an object from the persistent store and makes the object a transient object. It does not automatically make referenced objects unpersisted. Best way to do so is to override this virtual function in your own classes.

Namespace: [VelocityGraph](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override void Unpersist(  
    SessionBase session  
)
```

VB

```
Public Overrides Sub Unpersist (  
    session As SessionBase  
)
```

C++

```
public:  
virtual void Unpersist(  
    SessionBase^ session  
) override
```

F#

```
abstract Unpersist :  
    session : SessionBase -> unit  
override Unpersist :  
    session : SessionBase -> unit
```

Parameters

session

Type: [VelocityDb.Session.SessionBase](#)

The managing session

Implements

[IOptimizedPersistable.Unpersist\(SessionBase\)](#)

See Also

[VertexType Class](#)

[VelocityGraph Namespace](#)

VelocityGraph.Exceptions Namespace

The **VelocityGraph.Exceptions** namespace contains exception classes for the VelocityGraph Graph Database.

Classes

| Class | Description |
|-------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
|  EdgeDoesNotExistException | Exception thrown when a edge id is specified for an edge type and the edge does not exist. |
|  EdgeTypeDoesNotExistException | Exception thrown when a edge type id is specified and the edge type does not exist. |
|  EdgeTypeInUseException | Exception thrown when at least one edge exist for a edge type and attempting to remove the edge type. |
|  InvalidHeadVertexTypeException | Exception thrown when the type of the head vertex doesn't match the required head VertexType of an EdgeType. |
|  InvalidPropertyIdException | Exception thrown when a type id is specified for a property that does not exist. |
|  InvalidTailVertexTypeException | Exception thrown when the type of the tail vertex doesn't match the required tail VertexType of an EdgeType. |
|  InvalidTypeIdException | Exception thrown when a type id is specified for a type that does not exist. |
|  PropertyTypeInUseException | Exception thrown when at least one vertex or edge uses a property type when attempting to remove the property type |
|  VertexAlreadyExistException | Exception thrown when a vertex id is specified for a vertex type and the vertex already exist. |
|  VertexDoesNotExistException | Exception thrown when a vertex id is specified for a vertex type and the vertex does not exist. |
|  VertexTypeDoesNotExistException | Exception thrown when a vertex type id is specified and the vertex type does not exist. |
|  VertexTypeInUseException | Exception thrown when at least one vertex exist for a vertex type and attempting to remove the vertex type. |

EdgeDoesNotExistException Class

Exception thrown when an edge id is specified for an edge type and the edge does not exist.

Inheritance Hierarchy

[System.Object](#)

[System.Exception](#)

VelocityGraph.Exceptions.EdgeDoesNotExistException

Namespace: [VelocityGraph.Exceptions](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
[SerializableAttribute]  
public class EdgeDoesNotExistException : Exception
```

VB

```
<SerializableAttribute>  
Public Class EdgeDoesNotExistException  
    Inherits Exception
```

C++

```
[SerializableAttribute]  
public ref class EdgeDoesNotExistException : public Exception
```

F#

```
[<SerializableAttribute>]  
type EdgeDoesNotExistException =

[VelocityGraph.Exceptions Namespace](#)

VelocityGraph.Frontenac.Blueprints Namespace

The **VelocityGraph.Frontenac.Blueprints** namespace contains classes for the VelocityGraph Graph Database.

Classes

| Class | Description |
|---------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  CompareHelpers | |
|  DictionaryElement | |
|  Directions | |
|  Features | Features provides a listing of the features/qualities/quirks associated with any Graph implementation. This feature listing can be used to dynamically adjust code to the features of the graph implementation. For example, this feature listing is used extensively throughout the Blueprints TestSuite to validate behavior of the implementation. |
|  GraphHelpers | |
|  Parameter | |
|  Parameter(TK, TV) | |

Interfaces

| Interface | Description |
|---------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  ICloseableIterable(T) | A CloseableIterable is required where it is necessary to deallocate resources from an IEnumerable. |
|  IEdge | An Edge links two vertices. Along with its key/value properties, an edge has both a directionality and a label. The directionality determines which vertex is the tail vertex (out vertex) and which vertex is the head vertex (in vertex). The edge label determines the type of relationship that exists between the two vertices. Diagrammatically, outVertex ---label---> inVertex. |
|  IElement | An Element is the base class for both vertices and edges. An element has an identifier that must be unique to its inheriting classes (vertex or edges). An element can maintain a collection of key/value properties. Keys are always Strings and values can be any object. Particular implementations can reduce the space of objects that can be used as values. Typically, objects are C# primitives (e.g. string, long, int, boolean, etc.) |
|  IGraph | A Graph is a container object for a collection of vertices and a collection edges. |
|  IIndex | |
|  IIndexableGraph | An IIndexableGraph is a graph that supports the manual indexing of its elements. An index is typically some sort of tree structure that allows for the fast lookup of elements by key/value pairs. Indices |

| | | |
|---|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | have an Index object associated with them and allow the user to specify the putting and getting of elements into the index. |
| → | IKeyIndexableGraph | A KeyIndexableGraph is a graph that supports basic index functionality around the key/value pairs of the elements of the graph. By creating key indices for a particular property key, that key is indexed on all the elements of the graph. This has ramifications for quick lookups on methods like <code>getVertices(string, object)</code> and <code>getEdges(string, object)</code> . |
| → | IQuery | |
| → | IThreadedTransactionalGraph | ThreadedTransactionalGraph provides more fine grained control over the transactional context. While TransactionalGraph binds each transaction to the executing thread, ThreadedTransactionalGraph's <code>newTransaction</code> returns a TransactionalGraph that represents its own transactional context independent of the executing thread. Hence, one can have multiple threads operating against a single transaction represented by the returned TransactionalGraph object. This is useful for parallelizing graph algorithms. Note, that one needs to call <code>TransactionalGraph.Commit()</code> or <code>TransactionalGraph.Rollback()</code> to close the transactions returned |
| → | ITransactionalGraph | A transactional graph supports the notion of transactions. A transaction scopes a logically coherent operation composed of multiple read and write operations that either occurs at once or not at all. The exact notion of a transaction and its isolational guarantees depend on the implementing graph database. A transaction scopes a coherent and complete operations. Any element references created during a transaction should not be accessed outside its scope (i.e. after the transaction is committed or rolled back). Accessing such references outside the transactional context they were created in may lead to exceptions. If such access is necessary, the transactional context should be extended. By default, the first operation on a TransactionalGraph will start a transaction automatically. |
| → | IVertex | A vertex maintains pointers to both a set of incoming and outgoing edges. The outgoing edges are those edges for which the vertex is the tail. The incoming edges are those edges for which the vertex is the head. Diagrammatically, <code>---inEdges---</code> vertex <code>---outEdges---</code> . |
| → | IVertexQuery | A VertexQuery object defines a collection of filters and modifiers that are used to intelligently select edges from a vertex. |

Enumerations

| | Enumeration | Description |
|-------------------------------------------------------------------------------------|---------------------------|-------------|
|  | Compare | |
|  | Direction | |

Compare Enumeration

[Missing <summary> documentation for "T:VelocityGraph.Frontenac.Blueprints.Compare"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public enum Compare
```

VB

```
Public Enumeration Compare
```

C++

```
public enum class Compare
```

F#

```
type Compare
```

Members

| Member name | Value | Description |
|------------------|-------|-------------|
| Equal | 0 | |
| NotEqual | 1 | |
| GreaterThan | 2 | |
| GreaterThanEqual | 3 | |
| LessThan | 4 | |
| LessThanEqual | 5 | |
| Within | 6 | |

"M:VelocityGraph.Frontenac.Blueprints.CompareHelpers.Opposite(VelocityGraph.Frontenac.Blueprints.Compare)"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static Compare Opposite(  
    this Compare compare  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Function Opposite (  
    compare As Compare  
) As Compare
```

C++

```
public:  
[ExtensionAttribute]  
static Compare Opposite(  
    Compare compare  
)
```

F#

```
[<ExtensionAttribute>]  
static member Opposite :  
    compare : Compare -> Compare
```

Parameters

compare

Type: [VelocityGraph.Frontenac.Blueprints.Compare](#)

[Missing <param name="compare"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.CompareHelpers.Opposite(VelocityGraph.Frontenac.Blueprints.Compare)"]

Return Value

Type: [Compare](#)

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.CompareHelpers.Opposite(VelocityGraph.Frontenac.Blueprints.Compare)"]

VelocityDB Class Library

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [Compare](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

```

```

interface IDictionary<string, Object>
interface ICollection<KeyValuePair<string, Object>>
interface IEnumerable<KeyValuePair<string, Object>>
interface IEnumerable
interface IDictionary
interface ICollection
end
    
```

The **DictionaryElement** type exposes the following members.

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------|-------------|
|  | Count | |
|  | Graph | |
|  | Id | |
|  | IsFixedSize | |
|  | IsReadOnly | |
|  | IsSynchronized | |
|  | Item | |
|  | Keys | |
|  | SyncRoot | |
|  | Values | |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------|-------------|
|  | Add(KeyValuePair(String, Object)) | |
|  | Add(Object, Object) | |
|  | Add(String, Object) | |
|  | Clear | |
|  | Contains(KeyValuePair(String, Object)) | |
|  | Contains(Object) | |
|  | ContainsKey | |
|  | CopyTo(Array, Int32) | |
|  | CopyTo(KeyValuePair(String, Object)[], Int32) | |
|  | GetEnumerator | |
|  | GetProperty | |
|  | GetPropertyKeys | |
|  | Remove() | |

| | | |
|-----------------------------------------------------------------------------------|------------------------------------------------------|--|
|  | Remove(KeyValuePair(String, Object)) | |
|  | Remove(Object) | |
|  | Remove(String) | |
|  | RemoveProperty | |
|  | SetProperty | |
|  | TryGetValue | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AreEqual | A standard method for determining if two elements are equal. This method should be used by any Element.equals() implementation to ensure consistent behavior. (Defined by ElementHelpers.) |
|  | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. ElementPropertiesRule that share the same key on the to element are overwritten. (Defined by ElementHelpers.) |
|  | GetProperties | Get a clone of the properties of the provided element. In other words, a HashMap is created and filled with the key/values of the element's properties. (Defined by ElementHelpers.) |
|  | HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers.) |
|  | HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers.) |
|  | SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers.) |
|  | SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers.) |
|  | ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws ArgumentException whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers.) |

[Missing <summary> documentation for
"P:VelocityGraph.Frontenac.Blueprints.DictionaryElement.IsSynchronized"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual bool IsSynchronized { get; }
```

VB

```
Public Overridable ReadOnly Property IsSynchronized As Boolean  
    Get
```

C++

```
public:  
virtual property bool IsSynchronized {  
    bool get ();  
}
```

F#

```
abstract IsSynchronized : bool with get  
override IsSynchronized : bool with get
```

Property Value

Type: [Boolean](#)

Implements

[ICollection.IsSynchronized](#)

See Also

[DictionaryElement Class](#)

DictionaryElement.Item Property

[Missing <summary> documentation for "P:VelocityGraph.Frontenac.Blueprints.DictionaryElement.Item(System.String)"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual Object this[
    string key
] { get; set; }
```

VB

```
Public Overridable Default Property Item (
    key As String
) As Object
    Get
    Set
```

C++

```
public:
virtual property Object^ default[String^ key] {
    Object^ get (String^ key);
    void set (String^ key, Object^ value);
}
```

F#

```
abstract Item : Object with get, set
override Item : Object with get, set
```

Parameters

key

Type: [System.String](#)

Property Value

Type: [Object](#)

Implements

[IDictionary\(TKey, TValue\).Item\(TKey\)](#)

See Also

DictionaryElement.Keys Property

[Missing <summary> documentation for "P:VelocityGraph.Frontenac.Blueprints.DictionaryElement.Keys"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual ICollection<string> Keys { get; }
```

VB

```
Public Overridable ReadOnly Property Keys As ICollection(Of String)  
    Get
```

C++

```
public:  
virtual property ICollection<String^> Keys {  
    ICollection<String^> get ();  
}
```

F#

```
abstract Keys : ICollection<string> with get  
override Keys : ICollection<string> with get
```

Property Value

Type: [ICollection\(String\)](#)

Implements

DictionaryElement.SyncRoot Property

[Missing <summary> documentation for "P:VelocityGraph.Frontenac.Blueprints.DictionaryElement.SyncRoot"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual Object SyncRoot { get; }
```

VB

```
Public Overridable ReadOnly Property SyncRoot As Object  
    Get
```

C++

```
public:  
virtual property Object^ SyncRoot {  
    Object^ get ();  
}
```

F#

```
abstract SyncRoot : Object with get  
override SyncRoot : Object with get
```

Property Value

Type: [Object](#)

Implements

[ICollection.SyncRoot](#)

See Also

DictionaryElement.DictionaryElement Methods

The [DictionaryElement](#) type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------|-------------|
|  | Add(KeyValuePair(String, Object)) | |
|  | Add(Object, Object) | |
|  | Add(String, Object) | |
|  | Clear | |
|  | Contains(KeyValuePair(String, Object)) | |
|  | Contains(Object) | |
|  | ContainsKey | |
|  | CopyTo(Array, Int32) | |
|  | CopyTo(KeyValuePair(String, Object)[], Int32) | |
|  | GetEnumerator | |
|  | GetProperty | |
|  | GetPropertyKeys | |
|  | Remove() | |
|  | Remove(KeyValuePair(String, Object)) | |
|  | Remove(Object) | |
|  | Remove(String) | |
|  | RemoveProperty | |
|  | SetProperty | |
|  | TryGetValue | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AreEqual | A standard method for determining if two elements are equal. This method should be used by any Element.equals() implementation to ensure consistent behavior. (Defined by ElementHelpers .) |
|  | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. ElementPropertiesRule that share the same key on the to element are overwritten. (Defined by ElementHelpers .) |
|  | GetProperties | Get a clone of the properties of the provided element. In other words, a HashMap is created and filled with the key/values of the element's properties. (Defined by ElementHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers.) |
|  HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers.) |
|  SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers.) |
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers.) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws ArgumentException whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers.) |

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void Remove (  
    Object key  
)
```

VB

```
Public Sub Remove (  
    key As Object  
)
```

C++

```
public:  
virtual void Remove (  
    Object^ key  
) sealed
```

F#

```
abstract Remove :  
    key : Object -> unit  
override Remove :  
    key : Object -> unit
```

Parameters

key

Type: [System.Object](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.DictionaryElement.Remove(System.Object)"]

Implements

[IDictionary.Remove\(Object\)](#)

See Also

[DictionaryElement Class](#)

DictionaryElement.Remove Method (String)

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.DictionaryElement.Remove(System.String)"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual bool Remove(  
    string key  
)
```

VB

```
Public Overridable Function Remove (  
    key As String  
) As Boolean
```

C++

```
public:  
virtual bool Remove(  
    String^ key  
)
```

F#

```
abstract Remove :  
    key : string -> bool  
override Remove :  
    key : string -> bool
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.DictionaryElement.Remove(System.String)"]

Return Value

Type: [Boolean](#)

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.DictionaryElement.Remove(System.String)"]

Implements

[IDictionary\(TKey, TValue\).Remove\(TKey\)](#)

VelocityDB Class Library

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public abstract Object RemoveProperty(  
    string key  
)
```

VB

```
Public MustOverride Function RemoveProperty (  
    key As String  
) As Object
```

C++

```
public:  
virtual Object^ RemoveProperty(  
    String^ key  
) abstract
```

F#

```
abstract RemoveProperty :  
    key : string -> Object
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.DictionaryElement.RemoveProperty(System.String)"]

Return Value

Type: [Object](#)

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.DictionaryElement.RemoveProperty(System.String)"]

Implements

[IElement.RemoveProperty\(String\)](#)

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public abstract void SetProperty(  
    string key,  
    Object value  
)
```

VB

```
Public MustOverride Sub SetProperty (  
    key As String,  
    value As Object  
)
```

C++

```
public:  
virtual void SetProperty(  
    String^ key,  
    Object^ value  
) abstract
```

F#

```
abstract SetProperty :  
    key : string *  
    value : Object -> unit
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.DictionaryElement.SetProperty(System.String,System.Object)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.DictionaryElement.SetProperty(System.String,System.Object)"]

DictionaryElement.TryGetValue Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.DictionaryElement.TryGetValue(System.String,System.Object @)"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual bool TryGetValue(  
    string key,  
    out Object value  
)
```

VB

```
Public Overridable Function TryGetValue (  
    key As String,  
    <OutAttribute> ByRef value As Object  
) As Boolean
```

C++

```
public:  
virtual bool TryGetValue(  
    String^ key,  
    [OutAttribute] Object^% value  
)
```

F#

```
abstract TryGetValue :  
    key : string *  
    value : Object byref -> bool  
override TryGetValue :  
    key : string *  
    value : Object byref -> bool
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.DictionaryElement.TryGetValue(System.String,System.Object @)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.DictionaryElement.TryGetValue(System.String,System.Object @)"]

Return Value

Type: [Boolean](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.DictionaryElement.TryGetValue(System.String,System.Object @)"]

Implements

[IDictionary\(TKey, TValue\).TryGetValue\(TKey, TValue\)](#)

See Also

Directions Class

[Missing <summary> documentation for "T:VelocityGraph.Frontenac.Blueprints.Directions"]

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Directions

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static class Directions
```

VB

```
<ExtensionAttribute>  
Public NotInheritable Class Directions
```

C++

```
[ExtensionAttribute]  
public ref class Directions abstract sealed
```

F#

```
[<AbstractClassAttribute>]  
[<SealedAttribute>]  
[<ExtensionAttribute>]  
type Directions = class end
```

The **Directions** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------|-------------|
|  | Opposite | |

Fields

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------|-------------|
|  | Proper | |

See Also

[VelocityGraph.Frontenac.Blueprints Namespace](#)

Directions.Directions Methods

The [Directions](#) type exposes the following members.

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------|-------------|
|  | Opposite | |

See Also

[Directions Class](#)

[VelocityGraph.Frontenac.Blueprints Namespace](#)

Directions.Opposite Method

[Missing <summary> documentation for "M:VelocityGraph.Frontenac.Blueprints.Directions.Opposite(VelocityGraph.Frontenac.Blueprints.Direction)"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static Direction Opposite(  
    this Direction direction  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Function Opposite (  
    direction As Direction  
) As Direction
```

C++

```
public:  
[ExtensionAttribute]  
static Direction Opposite(  
    Direction direction  
)
```

F#

```
[<ExtensionAttribute>]  
static member Opposite :  
    direction : Direction -> Direction
```

Parameters

direction

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

[Missing <param name="direction"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Directions.Opposite(VelocityGraph.Frontenac.Blueprints.Direction)"]

Return Value

Type: [Direction](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Directions.Opposite(VelocityGraph.Frontenac.Blueprints.Direction)"]

VelocityDB Class Library

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [Direction](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

Features Class

Features provides a listing of the features/qualities/quirks associated with any Graph implementation. This feature listing can be used to dynamically adjust code to the features of the graph implementation. For example, this feature listing is used extensively throughout the Blueprints TestSuite to validate behavior of the implementation.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Features

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class Features
```

VB

```
Public Class Features
```

C++

```
public ref class Features
```

F#

```
type Features = class end
```

The **Features** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------|---------------------------------------------------------|
|  | Features | Initializes a new instance of the Features class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
|  | IgnoresSuppliedIds | Does the graph ignore user provided ids in graph.addVertex(object id)? |
|  | IsPersistent | Does the graph persist the graph to disk after shutdown? |
|  | IsRdfModel | Is the graph an RDF framework? Deprecated thus far, isRdfModel describes a collection of features. Use actual features to describe your data model. |

| | |
|----------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
|  IsWrapper | Does the graph implement WrapperGraph? |
|  SupportsBooleanProperty | Does the graph allows boolean to be used as a property value for a graph element? |
|  SupportsDoubleProperty | Does the graph allows double to be used as a property value for a graph element? |
|  SupportsDuplicateEdges | Does the graph allow for two edges with the same vertices and edge label to exist? |
|  SupportsEdgeIndex | Does the graph support the indexing of edges by their properties? |
|  SupportsEdgeIteation | Does the graph support graph.getEdges()? |
|  SupportsEdgeKeyIndex | Does the graph support key indexing on edges? |
|  SupportsEdgeProperties | Does the graph support setting and retrieving properties on edges? |
|  SupportsEdgeRetrieval | Does the graph support retrieving edges by id, i.e. graph.getEdge(object id)? |
|  SupportsFloatProperty | Does the graph allows float to be used as a property value for a graph element? |
|  SupportsIdProperty | Does the graph allow the use of the 'id' property name? |
|  SupportsIndices | Does the graph implement IIndexableGraph? |
|  SupportsIntegerProperty | Does the graph allows integer to be used as a property value for a graph element? |
|  SupportsKeyIndices | Does the graph implement KeyIndexableGraph? |
|  SupportsLabelProperty | Does the graph allow the use of the 'label' property name? |
|  SupportsLongProperty | Does the graph allows long to be used as a property value for a graph element? |
|  SupportsMapProperty | Does the graph allows map to be used as a property value for a graph element? |
|  SupportsMixedListProperty | Does the graph allows a mixed list (different data types within the same list) to be used as a property value for a graph element? |
|  SupportsPrimitiveArrayProperty | Does the graph allows a primitive array to be used as a property value for a graph element? |
|  SupportsSelfLoops | Does the graph allow an edge to have the same out/tail and in/head vertex? |
|  SupportsSerializableObjectProperty | Does the graph allow any serializable object to be used as a property value for a graph element? |
|  SupportsStringProperty | Graph allows string to be used as a property value for a graph element. |
|  SupportsThreadedTransactions | Does the graph implement ThreadedTransactionalGraph? |

| | |
|-------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
|  SupportsTransactions | Does the graph implement TransactionalGraph? |
|  SupportsUniformListProperty | Does the graph allows list (all objects with the list have the same data types) to be used as a property value for a graph element? |
|  SupportsVertexIndex | Does the graph support the indexing of vertices by their properties? |
|  SupportsVertexIteration | Does the graph support graph.getVertices()? |
|  SupportsVertexKeyIndex | Does the graph support key indexing on vertices? |
|  SupportsVertexProperties | Does the graph support setting and retrieving properties on vertices? |

Methods

| Name | Description |
|-------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  CheckCompliance | This method determines whether the full gamut of features have been set by the Graph implementation. This is useful for implementers to ensure that they did not miss specifying a feature. Throws <code>InvalidOperationException</code> if a feature was not set |
|  CopyFeatures | This method copies the features in this features object to another feature object. |
|  SupportsElementProperties | Checks whether the graph supports both vertex and edge properties |
|  ToMap | |
|  ToString | (Overrides Object.ToString() .) |

Does the graph support setting and retrieving properties on edges?

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public bool SupportsEdgeProperties { get; set; }
```

VB

```
Public Property SupportsEdgeProperties As Boolean  
    Get  
    Set
```

C++

```
public:  
property bool SupportsEdgeProperties {  
    bool get ();  
    void set (bool value);  
}
```

F#

```
member SupportsEdgeProperties : bool with get, set
```

Property Value

Type: [Boolean](#)

Features.SupportsEdgeRetrieval Property

Does the graph support retrieving edges by id, i.e. graph.getEdge(object id)?

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public bool SupportsEdgeRetrieval { get; set; }
```

VB

```
Public Property SupportsEdgeRetrieval As Boolean  
    Get  
    Set
```

C++

```
public:  
property bool SupportsEdgeRetrieval {  
    bool get ();  
    void set (bool value);  
}
```

F#

```
member SupportsEdgeRetrieval : bool with get, set
```

Property Value

Type: [Boolean](#)

Features.SupportsFloatProperty Property

Does the graph allows float to be used as a property value for a graph element?

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public bool SupportsFloatProperty { get; set; }
```

VB

```
Public Property SupportsFloatProperty As Boolean  
    Get  
    Set
```

C++

```
public:  
property bool SupportsFloatProperty {  
    bool get ();  
    void set (bool value);  
}
```

F#

```
member SupportsFloatProperty : bool with get, set
```

Features.Features Methods

The [Features](#) type exposes the following members.

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | CheckCompliance | This method determines whether the full gamut of features have been set by the Graph implementation. This is useful for implementers to ensure that they did not miss specifying a feature. Throws <code>InvalidOperationException</code> if a feature was not set |
|  | CopyFeatures | This method copies the features in this features object to another feature object. |
|  | SupportsElementProperties | Checks whether the graph supports both vertex and edge properties |
|  | ToMap | |
|  | ToString | (Overrides Object.ToString() .) |

Features.CopyFeatures Method

This method copies the features in this features object to another feature object.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Features CopyFeatures ()
```

VB

```
Public Function CopyFeatures As Features
```

C++

```
public:  
Features^ CopyFeatures ()
```

F#

```
member CopyFeatures : unit -> Features
```

Return Value

Type: [Features](#)

a feature object with a clone of the features in the prior.

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.GraphHelpers.CreateTinkerGraph(VelocityGraph.Frontenac.Blueprints.IGraph)"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void CreateTinkerGraph(  
    this IGraph graph  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Sub CreateTinkerGraph (  
    graph As IGraph  
)
```

C++

```
public:  
[ExtensionAttribute]  
static void CreateTinkerGraph(  
    IGraph^ graph  
)
```

F#

```
[<ExtensionAttribute>]  
static member CreateTinkerGraph :  
    graph : IGraph -> unit
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

[Missing <param name="graph"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.GraphHelpers.CreateTinkerGraph(VelocityGraph.Frontenac.Blueprints.IGraph)"]

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IGraph](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

    dictionary As IDictionary(Of TKey, TValue),
    key As TKey
) As TValue
```

C++

```
public:
[ExtensionAttribute]
generic<typename TKey, typename TValue>
static TValue Get(
    IDictionary<TKey, TValue>^ dictionary,
    TKey key
)
```

F#

```
[<ExtensionAttribute>]
static member Get :
    dictionary : IDictionary<'TKey, 'TValue> *
    key : 'TKey -> 'TValue
```

Parameters

dictionary

Type: [System.Collections.Generic.IDictionary\(TKey, TValue\)](#)

[Missing <param name="dictionary"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.GraphHelpers.Get`2(System.Collections.Generic.IDictionary{`0,`1},`0)"]

key

Type: **TKey**

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.GraphHelpers.Get`2(System.Collections.Generic.IDictionary{`0,`1},`0)"]

Type Parameters

TKey

[Missing <typeparam name="TKey"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.GraphHelpers.Get`2(System.Collections.Generic.IDictionary{`0,`1},`0)"]

TValue

[Missing <typeparam name="TValue"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.GraphHelpers.Get`2(System.Collections.Generic.IDictionary{`0,`1},`0)"]

Return Value

Type: **TValue**

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.GraphHelpers.Get`2(System.Collections.Generic.IDictionary{`0,`1},`0)"]

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IDictionary\(TKey, TValue\)](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

IEdge Interface

An Edge links two vertices. Along with its key/value properties, an edge has both a directionality and a label. The directionality determines which vertex is the tail vertex (out vertex) and which vertex is the head vertex (in vertex). The edge label determines the type of relationship that exists between the two vertices. Diagrammatically, outVertex ---label---> inVertex.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IEdge : IElement, IDictionary<string, Object>,
    ICollection<KeyValuePair<string, Object>>,
    IEnumerable<KeyValuePair<string, Object>>,
    IEnumerable, IDictionary, ICollection
```

VB

```
Public Interface IEdge
    Inherits IElement, IDictionary(Of String, Object),
    ICollection(Of KeyValuePair(Of String, Object)), IEnumerable(Of
KeyValuePair(Of String, Object)),
    IEnumerable, IDictionary, ICollection
```

C++

```
public interface class IEdge : IElement,
    IDictionary<String^, Object^>, ICollection<KeyValuePair<String^,
Object^>>,
    IEnumerable<KeyValuePair<String^, Object^>>, IEnumerable,
    IDictionary, ICollection
```

F#

```
type IEdge =
    interface
        interface IElement
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
        interface IDictionary
        interface ICollection
    end
```

The **IEdge** type exposes the following members.

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------|--------------------------------------------|
|  | Label | Return the label associated with the edge. |

Methods

| Name | Description |
|-------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
|  GetVertex | Return the tail/out or head/in vertex. ArgumentException is thrown if a direction of both is provided |

Extension Methods

| Name | Description |
|------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AreEqual | A standard method for determining if two elements are equal. This method should be used by any Element.equals() implementation to ensure consistent behavior. (Defined by ElementHelpers.) |
|  CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. ElementPropertiesRule that share the same key on the to element are overwritten. (Defined by ElementHelpers.) |
|  EdgeString | (Defined by StringFactory.) |
|  GetProperties | Get a clone of the properties of the provided element. In other words, a HashMap is created and filled with the key/values of the element's properties. (Defined by ElementHelpers.) |
|  HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers.) |
|  HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers.) |
|  RelabelEdge | An edge is relabeled by creating a new edge with the same properties, but new label. Note that an edge is deleted and an edge is added. (Defined by EdgeHelpers.) |
|  SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers.) |
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers.) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws ArgumentException whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers.) |

IEdge.GetVertex Method

Return the tail/out or head/in vertex. ArgumentException is thrown if a direction of both is provided

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IVertex GetVertex(  
    Direction direction  
)
```

VB

```
Function GetVertex (  
    direction As Direction  
) As IVertex
```

C++

```
IVertex^ GetVertex(  
    Direction direction  
)
```

F#

```
abstract GetVertex :  
    direction : Direction -> IVertex
```

Parameters

direction

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

whether to return the tail/out or head/in vertex

Return Value

Type: [IVertex](#)

the tail/out or head/in vertex

See Also

[IEdge Interface](#)

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IElement Interface

An Element is the base class for both vertices and edges. An element has an identifier that must be unique to its inheriting classes (vertex or edges). An element can maintain a collection of key/value properties. Keys are always Strings and values can be any object. Particular implementations can reduce the space of objects that can be used as values. Typically, objects are C# primitives (e.g. string, long, int, boolean, etc.)

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IElement : IDictionary<string, Object>,
    ICollection<KeyValuePair<string, Object>>,
    IEnumerable<KeyValuePair<string, Object>>,
    IEnumerable, IDictionary, ICollection
```

VB

```
Public Interface IElement
    Inherits IDictionary(Of String, Object), ICollection(Of KeyValuePair(Of
String, Object)),
    IEnumerable(Of KeyValuePair(Of String, Object)), IEnumerable,
    IDictionary, ICollection
```

C++

```
public interface class IElement : IDictionary<String^, Object^>,
    ICollection<KeyValuePair<String^, Object^>>,
    IEnumerable<KeyValuePair<String^, Object^>>,
    IEnumerable, IDictionary, ICollection
```

F#

```
type IElement =
    interface
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
        interface IDictionary
        interface ICollection
    end
```

The **IElement** type exposes the following members.

Properties

| Name | Description |
|-----------------------------------------------------------------------------------------------------------|------------------------------------|
|  Graph | The graph that owns this IElement. |

| | |
|------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Id | An identifier that is unique to its inheriting class. All vertices of a graph must have unique identifiers. All edges of a graph must have unique identifiers. |
|------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|

Methods

| Name | Description |
|-------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
|  GetProperty | Return the object value associated with the provided string key. If no value exists for that key, return null. |
|  GetPropertyKeys | Return all the keys associated with the element. |
|  Remove | Remove the element from the graph. |
|  RemoveProperty | Un-assigns a key/value property from the element. The object value of the removed property is returned. |
|  SetProperty | Assign a key/value property to the element. If a value already exists for this key, then the previous key/value is overwritten. |

Extension Methods

| Name | Description |
|------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers.) |
|  CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers.) |
|  GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers.) |
|  HaveEqualIds | Simply tests if the element ids are <code>equal()</code> . (Defined by ElementHelpers.) |
|  HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be <code>equals()</code> . (Defined by ElementHelpers.) |
|  SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers.) |
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers.) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws |

VelocityDB Class Library

| | |
|--|--------------------------------------------------------------------------------------------------------------------------------------------|

IElement.GetProperty Method

Return the object value associated with the provided string key. If no value exists for that key, return null.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
Object GetProperty(  
    string key  
)
```

VB

```
Function GetProperty (  
    key As String  
) As Object
```

C++

```
Object^ GetProperty(  
    String^ key  
)
```

F#

```
abstract GetProperty :  
    key : string -> Object
```

Parameters

key

Type: [System.String](#)

the key of the key/value property

Return Value

Type: [Object](#)

the object value related to the string key

See Also

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IElement.GetPropertyKeys Method

Return all the keys associated with the element.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IEnumerable<string> GetPropertyKeys ()
```

VB

```
Function GetPropertyKeys As IEnumerable (Of String)
```

C++

```
IEnumerable<String^>^ GetPropertyKeys ()
```

F#

```
abstract GetPropertyKeys : unit -> IEnumerable<string>
```

Return Value

Type: [IEnumerable\(String\)](#)

the set of all string keys associated with the element

See Also

IElement.RemoveProperty Method

Un-assigns a key/value property from the element. The object value of the removed property is returned.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
Object RemoveProperty(  
    string key  
)
```

VB

```
Function RemoveProperty (  
    key As String  
) As Object
```

C++

```
Object^ RemoveProperty(  
    String^ key  
)
```

F#

```
abstract RemoveProperty :  
    key : string -> Object
```

Parameters

key

Type: [System.String](#)

the key of the property to remove from the element

Return Value

Type: [Object](#)

the object value associated with that key prior to removal

See Also

[IElement Interface](#)

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IElement.SetProperty Method

Assign a key/value property to the element. If a value already exists for this key, then the previous key/value is overwritten.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
void SetProperty(  
    string key,  
    Object value  
)
```

VB

```
Sub SetProperty (  
    key As String,  
    value As Object  
)
```

C++

```
void SetProperty(  
    String^ key,  
    Object^ value  
)
```

F#

```
abstract SetProperty :  
    key : string *  
    value : Object -> unit
```

Parameters

key

Type: [System.String](#)

the string key of the property

value

Type: [System.Object](#)

the object value o the property

IGraph Interface

A Graph is a container object for a collection of vertices and a collection edges.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IGraph
```

VB

```
Public Interface IGraph
```

C++

```
public interface class IGraph
```

F#

```
type IGraph = interface end
```

The **IGraph** type exposes the following members.

Properties

| Name | Description |
|--------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Features | Get the particular features of the graph implementation. Not all graph implementations are identical nor perfectly implement the Blueprints API. The Features object returned contains meta-data about numerous potential divergences between implementations. |

Methods

| Name | Description |
|------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddEdge | Add an edge to the graph. The added edges requires a recommended identifier, a tail vertex, an head vertex, and a label. Like adding a vertex, the provided object identifier may be ignored by the implementation. |
|  AddVertex | Create a new vertex, add it to the graph, and return the newly created vertex. The provided object identifier is a recommendation for the identifier to use. It is not required that the implementation use this identifier. |
|  GetEdge | Return the edge referenced by the provided object identifier. If no edge is referenced by that identifier, then return null. |
|  GetEdges() | Return an iterable to all the edges in the graph. If this is not possible for the implementation, then an NotSupportedException can be thrown. |
|  GetEdges(String, Object) | Return an iterable to all the edges in the graph that have a particular key/value property. If this is not possible for the implementation, then an |

| | | |
|-----------------------------------------------------------------------------------|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | NotSupportedException can be thrown. The graph implementation should use indexing structures to make this efficient else a full edge-filter scan is required. |
|  | GetVertex | Return the vertex referenced by the provided object identifier. If no vertex is referenced by that identifier, then return null. |
|  | GetVertices() | Return an iterable to all the vertices in the graph. If this is not possible for the implementation, then an NotSupportedException can be thrown. |
|  | GetVertices(String, Object) | Return an iterable to all the vertices in the graph that have a particular key/value property. If this is not possible for the implementation, then a NotSupportedException can be thrown. The graph implementation should use indexing structures to make this efficient else a full vertex-filter scan is required. |
|  | Query | Generate a query object that can be used to fine tune which edges/vertices are retrieved from the graph. |
|  | RemoveEdge | Remove the provided edge from the graph. |
|  | RemoveVertex | Remove the provided vertex from the graph. Upon removing the vertex, all the edges by which the vertex is connected must be removed as well. |
|  | Shutdown | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  | CreateTinkerGraph | (Defined by GraphHelpers .) |
|  | GraphString | (Defined by StringFactory .) |
|  | LoadGml | (Defined by GraphHelpers .) |
|  | LoadGraphml | (Defined by GraphHelpers .) |
|  | LoadGraphson | (Defined by GraphHelpers .) |
|  | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 |

VelocityDB Class Library

| | | |
|-----------------------------------------------------------------------------------|------------------------------|--------------------------------------------------------------------------------------------------|
| | | mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |
|  | SaveDotNet | (Defined by GraphHelpers.) |
|  | SaveGml | (Defined by GraphHelpers.) |
|  | SaveGraphml | (Defined by GraphHelpers.) |
|  | SaveGraphson | (Defined by GraphHelpers.) |

|  GetVertices(String, Object) | Return an iterable to all the vertices in the graph that have a particular key/value property. If this is not possible for the implementation, then a <code>NotSupportedException</code> can be thrown. The graph implementation should use indexing structures to make this efficient else a full vertex-filter scan is required. |
|  Query | Generate a query object that can be used to fine tune which edges/vertices are retrieved from the graph. |
|  RemoveEdge | Remove the provided edge from the graph. |
|  RemoveVertex | Remove the provided vertex from the graph. Upon removing the vertex, all the edges by which the vertex is connected must be removed as well. |
|  Shutdown | |

Extension Methods

| Name | Description |
|-------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
|  AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  CreateTinkerGraph | (Defined by GraphHelpers .) |
|  GraphString | (Defined by StringFactory .) |
|  LoadGml | (Defined by GraphHelpers .) |
|  LoadGraphml | (Defined by GraphHelpers .) |
|  LoadGraphson | (Defined by GraphHelpers .) |
|  ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers .) |
|  SaveDotNet | (Defined by GraphHelpers .) |
|  SaveGml | (Defined by GraphHelpers .) |
|  SaveGraphml | (Defined by GraphHelpers .) |
|  SaveGraphson | (Defined by GraphHelpers .) |

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IGraph.AddEdge Method

Add an edge to the graph. The added edges requires a recommended identifier, a tail vertex, an head vertex, and a label. Like adding a vertex, the provided object identifier may be ignored by the implementation.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IEdge AddEdge (  
    Object id,  
    IVertex outVertex,  
    IVertex inVertex,  
    string label  
)
```

VB

```
Function AddEdge (  
    id As Object,  
    outVertex As IVertex,  
    inVertex As IVertex,  
    label As String  
) As IEdge
```

C++

```
IEdge^ AddEdge (  
    Object^ id,  
    IVertex^ outVertex,  
    IVertex^ inVertex,  
    String^ label  
)
```

F#

```
abstract AddEdge :  
    id : Object *  
    outVertex : IVertex *  
    inVertex : IVertex *  
    label : string -> IEdge
```

Parameters

id

Type: [System.Object](#)

the recommended object identifier

outVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

VelocityDB Class Library

the vertex on the tail of the edge

inVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

the vertex on the head of the edge

label

Type: [System.String](#)

the label associated with the edge

Return Value

Type: [IEdge](#)

the newly created edge

See Also

[IGraph Interface](#)

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IGraph.AddVertex Method

Create a new vertex, add it to the graph, and return the newly created vertex. The provided object identifier is a recommendation for the identifier to use. It is not required that the implementation use this identifier.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IVertex AddVertex(  
    Object id  
)
```

VB

```
Function AddVertex (  
    id As Object  
) As IVertex
```

C++

```
IVertex^ AddVertex(  
    Object^ id  
)
```

F#

```
abstract AddVertex :  
    id : Object -> IVertex
```

Parameters

id

Type: [System.Object](#)

the recommended object identifier

Return Value

Type: [IVertex](#)

the newly created vertex

See Also

[IGraph Interface](#)

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IGraph.GetEdge Method

Return the edge referenced by the provided object identifier. If no edge is referenced by that identifier, then return null.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IEdge GetEdge(  
    Object id  
)
```

VB

```
Function GetEdge (  
    id As Object  
) As IEdge
```

C++

```
IEdge^ GetEdge(  
    Object^ id  
)
```

F#

```
abstract GetEdge :  
    id : Object -> IEdge
```

Parameters

id

Type: [System.Object](#)

the identifier of the edge to retrieved from the graph

Return Value

Type: [IEdge](#)

the edge referenced by the provided identifier or null when no such edge exists

IGraph.GetEdges Method

Return an iterable to all the edges in the graph. If this is not possible for the implementation, then an `NotSupportedException` can be thrown.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IEnumerable<IEdge> GetEdges ()
```

VB

```
Function GetEdges As IEnumerable(Of IEdge)
```

C++

```
IEnumerable<IEdge^>^ GetEdges ()
```

F#

```
abstract GetEdges : unit -> IEnumerable<IEdge>
```

Return Value

Type: [IEnumerable\(IEdge\)](#)

an iterable reference to all edges in the graph

See Also

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IGraph.GetEdges Method (String, Object)

Return an iterable to all the edges in the graph that have a particular key/value property. If this is not possible for the implementation, then an `NotSupportedException` can be thrown. The graph implementation should use indexing structures to make this efficient else a full edge-filter scan is required.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IEnumerable<IEdge> GetEdges (  
    string key,  
    Object value  
)
```

VB

```
Function GetEdges (  
    key As String,  
    value As Object  
) As IEnumerable(Of IEdge)
```

C++

```
IEnumerable<IEdge^>^ GetEdges (  
    String^ key,  
    Object^ value  
)
```

F#

```
abstract GetEdges :  
    key : string *  
    value : Object -> IEnumerable<IEdge>
```

Parameters

key

Type: [System.String](#)

the key of the edge

value

Type: [System.Object](#)

the value of the edge

Return Value

Type: [IEnumerable\(IEdge\)](#)

an iterable of edges with provided key and value

VelocityDB Class Library

Return the vertex referenced by the provided object identifier. If no vertex is referenced by that identifier, then return null.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IVertex GetVertex(  
    Object id  
)
```

VB

```
Function GetVertex (  
    id As Object  
) As IVertex
```

C++

```
IVertex^ GetVertex(  
    Object^ id  
)
```

F#

```
abstract GetVertex :  
    id : Object -> IVertex
```

Parameters

id

Type: [System.Object](#)

the identifier of the vertex to retrieved from the graph

Return Value

Type: [IVertex](#)

the vertex referenced by the provided identifier or null when no such vertex exists

Syntax

C#

```
void RemoveEdge (  
    IEdge edge  
)
```

VB

```
Sub RemoveEdge (  
    edge As IEdge  
)
```

C++

```
void RemoveEdge (  
    IEdge^ edge  
)
```

F#

```
abstract RemoveEdge :  
    edge : IEdge -> unit
```

Parameters

edge

Type: [VelocityGraph.Frontenac.Blueprints.IEdge](#)

the edge to remove from the graph

See Also

[IGraph Interface](#)

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IGraph.RemoveVertex Method

Remove the provided vertex from the graph. Upon removing the vertex, all the edges by which the vertex is connected must be removed as well.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
void RemoveVertex(  
    IVertex vertex  
)
```

VB

```
Sub RemoveVertex (  
    vertex As IVertex  
)
```

C++

```
void RemoveVertex(  
    IVertex^ vertex  
)
```

F#

```
abstract RemoveVertex :  
    vertex : IVertex -> unit
```

Parameters

vertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

the vertex to remove from the graph

IIndex Interface

[Missing <summary> documentation for "T:VelocityGraph.Frontenac.Blueprints.IIndex"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IIndex
```

VB

```
Public Interface IIndex
```

C++

```
public interface class IIndex
```

F#

```
type IIndex = interface end
```

The **IIndex** type exposes the following members.

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------|--------------------------------------------|
|  | Name | Get the name of the index. |
|  | Type | Get the class that this index is indexing. |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | Count | Get a count of elements with a particular key/value pair. The semantics are the same as the get method. |
|  | Get | Get all elements that are indexed by the provided key/value. |
|  | Put | Index an element by a key and a value. |
|  | Query | Get all the elements that are indexed by the provided key and specified query object. This is useful for graph implementations that support complex query capabilities. If querying is not supported, simply throw a NotSupportedException. |
|  | Remove | Remove an element indexed by a particular key/value. |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------|----------------------------------------------|
|  | IndexString | (Defined by StringFactory .) |

IIndex.Count Method

Get a count of elements with a particular key/value pair. The semantics are the same as the get method.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
long Count(  
    string key,  
    Object value  
)
```

VB

```
Function Count (  
    key As String,  
    value As Object  
) As Long
```

C++

```
long long Count(  
    String^ key,  
    Object^ value  
)
```

F#

```
abstract Count :  
    key : string *  
    value : Object -> int64
```

Parameters

key

Type: [System.String](#)

denoting the sub-index to search

value

Type: [System.Object](#)

the value to search for

Return Value

Type: [Int64](#)

the collection of elements that meet that criteria

See Also

[IIndex Interface](#)

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IIndex.Get Method

Get all elements that are indexed by the provided key/value.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IEnumerable<IElement> Get(  
    string key,  
    Object value  
)
```

VB

```
Function Get (  
    key As String,  
    value As Object  
) As IEnumerable(Of IElement)
```

C++

```
IEnumerable<IElement^> Get(  
    String^ key,  
    Object^ value  
)
```

F#

```
abstract Get :  
    key : string *  
    value : Object -> IEnumerable<IElement>
```

Parameters

key

Type: [System.String](#)

the key of the indexed elements

value

Type: [System.Object](#)

the value of the indexed elements

Return Value

Type: [IEnumerable\(IElement\)](#)

an IEnumerable of elements that have a particular key/value in the index

See Also

[IIndex Interface](#)

IIndex.Put Method

Index an element by a key and a value.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
void Put(  
    string key,  
    Object value,  
    IElement element  
)
```

VB

```
Sub Put (  
    key As String,  
    value As Object,  
    element As IElement  
)
```

C++

```
void Put(  
    String^ key,  
    Object^ value,  
    IElement^ element  
)
```

F#

```
abstract Put :  
    key : string *  
    value : Object *  
    element : IElement -> unit
```

Parameters

key

Type: [System.String](#)

the key to index the element by

value

Type: [System.Object](#)

the value to index the element by

element

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

the element to index

VelocityDB Class Library

IIndex.Query Method

Get all the elements that are indexed by the provided key and specified query object. This is useful for graph implementations that support complex query capabilities. If querying is not supported, simply throw a NotSupportedException.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IEnumerable<IElement> Query(  
    string key,  
    Object query  
)
```

VB

```
Function Query (  
    key As String,  
    query As Object  
) As IEnumerable(Of IElement)
```

C++

```
IEnumerable<IElement^>^ Query(  
    String^ key,  
    Object^ query  
)
```

F#

```
abstract Query :  
    key : string *  
    query : Object -> IEnumerable<IElement>
```

Parameters

key

Type: [System.String](#)

the key of the indexed elements

query

Type: [System.Object](#)

the query object for the indexed elements' keys

Return Value

Type: [IEnumerable\(IElement\)](#)

an IEnumerable of elements that have a particular key/value in the index that match the query object

VelocityDB Class Library

IIndex.Remove Method

Remove an element indexed by a particular key/value.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
void Remove(  
    string key,  
    Object value,  
    IElement element  
)
```

VB

```
Sub Remove (  
    key As String,  
    value As Object,  
    element As IElement  
)
```

C++

```
void Remove(  
    String^ key,  
    Object^ value,  
    IElement^ element  
)
```

F#

```
abstract Remove :  
    key : string *  
    value : Object *  
    element : IElement -> unit
```

Parameters

key

Type: [System.String](#)

the key of the indexed element

value

Type: [System.Object](#)

the value of the indexed element

element

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

the element to remove given the key/value pair

VelocityDB Class Library

See Also

[Index Interface](#)

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IIndexableGraph Interface

An IIndexableGraph is a graph that supports the manual indexing of its elements. An index is typically some sort of tree structure that allows for the fast lookup of elements by key/value pairs. Indices have an Index object associated with them and allow the user to specify the putting and getting of elements into the index.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IIndexableGraph : IGraph
```

VB

```
Public Interface IIndexableGraph
    Inherits IGraph
```

C++

```
public interface class IIndexableGraph : IGraph
```

F#

```
type IIndexableGraph =
    interface
        interface IGraph
    end
```

The **IIndexableGraph** type exposes the following members.

Methods

| Name | Description |
|-----------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
|  CreateIndex | Generate an index with a particular name for a particular class. |
|  DropIndex | Remove an index associated with the graph. |
|  GetIndex | Get an index from the graph by its name and index class. An index is unique up to name. |
|  GetIndices | Get all the indices maintained by the graph. |

Extension Methods

| Name | Description |
|-------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
|  AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddUniqueVertex | Add a vertex to a graph only if no other vertex in the provided Index is indexed by the property key/value pair. If a vertex already exists with that key/value pair, return the pre-existing vertex. (Defined by IndexableGraphHelpers .) |
|  AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  CreateTinkerGraph | (Defined by GraphHelpers .) |
|  GraphString | (Defined by StringFactory .) |
|  LoadGml | (Defined by GraphHelpers .) |
|  LoadGraphml | (Defined by GraphHelpers .) |
|  LoadGraphson | (Defined by GraphHelpers .) |
|  ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers .) |
|  SaveDotNet | (Defined by GraphHelpers .) |
|  SaveGml | (Defined by GraphHelpers .) |
|  SaveGraphml | (Defined by GraphHelpers .) |

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IIndexableGraph.CreateIndex Method

Generate an index with a particular name for a particular class.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IIndex CreateIndex(  
    string indexName,  
    Type indexClass,  
    params Parameter[] indexParameters  
)
```

VB

```
Function CreateIndex (  
    indexName As String,  
    indexClass As Type,  
    ParamArray indexParameters As Parameter()  
) As IIndex
```

C++

```
IIndex^ CreateIndex(  
    String^ indexName,  
    Type^ indexClass,  
    ... array<Parameter^>^ indexParameters  
)
```

F#

```
abstract CreateIndex :  
    indexName : string *  
    indexClass : Type *  
    indexParameters : Parameter[] -> IIndex
```

Parameters

indexName

Type: [System.String](#)

the name of the manual index

indexClass

Type: [System.Type](#)

the element class that this index is indexing (can be base class)

indexParameters

Type: [VelocityGraph.Frontenac.Blueprints.Parameter\[\]](#)

a collection of parameters for the underlying index implementation

Return Value

Type: [IIndex](#)

the index created

IIndexableGraph.DropIndex Method

Remove an index associated with the graph.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
void DropIndex(  
    string indexName  
)
```

VB

```
Sub DropIndex (  
    indexName As String  
)
```

C++

```
void DropIndex(  
    String^ indexName  
)
```

F#

```
abstract DropIndex :  
    indexName : string -> unit
```

Parameters

indexName

Type: [System.String](#)

the name of the index to drop

See Also

IIndexableGraph.GetIndex Method

Get an index from the graph by its name and index class. An index is unique up to name.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IIndex GetIndex(  
    string indexName,  
    Type indexClass  
)
```

VB

```
Function GetIndex (  
    indexName As String,  
    indexClass As Type  
) As IIndex
```

C++

```
IIndex^ GetIndex(  
    String^ indexName,  
    Type^ indexClass  
)
```

F#

```
abstract GetIndex :  
    indexName : string *  
    indexClass : Type -> IIndex
```

Parameters

indexName

Type: [System.String](#)

the name of the index to retrieve

indexClass

Type: [System.Type](#)

the class of the elements being indexed (can be base class)

Return Value

Type: [IIndex](#)

the retrieved index

IIndexableGraph.GetIndices Method

Get all the indices maintained by the graph.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IEnumerable<IIndex> GetIndices ()
```

VB

```
Function GetIndices As IEnumerable(Of IIndex)
```

C++

```
IEnumerable<IIndex^>^ GetIndices ()
```

F#

```
abstract GetIndices : unit -> IEnumerable<IIndex>
```

Return Value

Type: [IEnumerable\(IIndex\)](#)

the indices associated with the graph

See Also

[IIndexableGraph Interface](#)

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IKeyIndexableGraph Interface

A KeyIndexableGraph is a graph that supports basic index functionality around the key/value pairs of the elements of the graph. By creating key indices for a particular property key, that key is indexed on all the elements of the graph. This has ramifications for quick lookups on methods like `getVertices(string, object)` and `getEdges(string, object)`.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IKeyIndexableGraph : IGraph
```

VB

```
Public Interface IKeyIndexableGraph
    Inherits IGraph
```

C++

```
public interface class IKeyIndexableGraph : IGraph
```

F#

```
type IKeyIndexableGraph =
    interface
        interface IGraph
    end
```

The **IKeyIndexableGraph** type exposes the following members.

Methods

| Name | Description |
|--------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
|  CreateKeyIndex | Create an automatic indexing structure for indexing provided key for element class. |
|  DropKeyIndex | Remove an automatic indexing structure associated with indexing provided key for element class. |
|  GetIndexedKeys | Return all the index keys associated with a particular element class. |

Extension Methods

| Name | Description |
|---------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|
|  AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers.) |
|  CreateTinkerGraph | (Defined by GraphHelpers.) |
|  GraphString | (Defined by StringFactory.) |
|  LoadGml | (Defined by GraphHelpers.) |
|  LoadGraphml | (Defined by GraphHelpers.) |
|  LoadGraphson | (Defined by GraphHelpers.) |
|  ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |

IKeyIndexableGraph.CreateKeyIndex Method

Create an automatic indexing structure for indexing provided key for element class.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
void CreateKeyIndex(  
    string key,  
    Type elementClass,  
    params Parameter[] indexParameters  
)
```

VB

```
Sub CreateKeyIndex (  
    key As String,  
    elementClass As Type,  
    ParamArray indexParameters As Parameter()  
)
```

C++

```
void CreateKeyIndex(  
    String^ key,  
    Type^ elementClass,  
    ... array<Parameter^>^ indexParameters  
)
```

F#

```
abstract CreateKeyIndex :  
    key : string *  
    elementClass : Type *  
    indexParameters : Parameter[] -> unit
```

Parameters

key

Type: [System.String](#)

the key to drop the index for

elementClass

Type: [System.Type](#)

the element class that the index is for

indexParameters

Type: [VelocityGraph.Frontenac.Blueprints.Parameter\[\]](#)

a collection of parameters for the underlying index implementation

IQuery Interface

[Missing <summary> documentation for "T:VelocityGraph.Frontenac.Blueprints.IQuery"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IQuery
```

VB

```
Public Interface IQuery
```

C++

```
public interface class IQuery
```

F#

```
type IQuery = interface end
```

The **IQuery** type exposes the following members.

Methods

| Name | Description |
|--------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
|  Edges | Execute the query and return the matching edges. |
|  Has(String, Object) | Filter out the edge if it does not have a property with the specified value. |
|  Has(T)(String, Compare, T) | Filter out the edge if it does not have a property with a comparable value. |
|  Interval(T) | Filter out the edge if its property value is not within the provided interval. |
|  Limit | Filter out the edge if the max number of edges to retrieve has already been reached. |
|  Vertices | Execute the query and return the vertices on the other end of the matching edges. |

IQuery^ Has(
    String^ key,
    Compare compare,
    T value
)
```

F#

```
abstract Has :
    key : string *
    compare : Compare *
    value : 'T -> IQuery
```

Parameters

key

Type: [System.String](#)

the key of the property

compare

Type: [VelocityGraph.Frontenac.Blueprints.Compare](#)

the comparator to use for comparison

value

Type: **T**

the value to check against

Type Parameters

T

[Missing <typeparam name="T"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.IQuery.Has`1(System.String,VelocityGraph.Frontenac.Blueprints.Compare,`0)"]

Return Value

Type: [IQuery](#)

the modified query object

IThreadedTransactionalGraph Interface

ThreadedTransactionalGraph provides more fine grained control over the transactional context. While TransactionalGraph binds each transaction to the executing thread, ThreadedTransactionalGraph's newTransaction returns a TransactionalGraph that represents its own transactional context independent of the executing thread. Hence, one can have multiple threads operating against a single transaction represented by the returned TransactionalGraph object. This is useful for parallelizing graph algorithms. Note, that one needs to call TransactionalGraph.Commit() or TransactionalGraph.Rollback() to close the transactions returned

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IThreadedTransactionalGraph : ITransactionalGraph,
    IGraph
```

VB

```
Public Interface IThreadedTransactionalGraph
    Inherits ITransactionalGraph, IGraph
```

C++

```
public interface class IThreadedTransactionalGraph : ITransactionalGraph,
    IGraph
```

F#

```
type IThreadedTransactionalGraph =
    interface
        interface ITransactionalGraph
        interface IGraph
    end
```

The **IThreadedTransactionalGraph** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------|----------------------------------------------------------------------------------------------------------------|
|  | NewTransaction | Returns a TransactionalGraph that represents a transactional context independent of the executing transaction. |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------|-----------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers.) |
|  CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers.) |
|  CreateTinkerGraph | (Defined by GraphHelpers.) |
|  GraphString | (Defined by StringFactory.) |
|  LoadGml | (Defined by GraphHelpers.) |
|  LoadGraphml | (Defined by GraphHelpers.) |

[IThreadedTransactionalGraph Interface](#)

[VelocityGraph.Frontenac.Blueprints Namespace](#)

IThreadedTransactionalGraph.NewTransaction Method

Returns a TransactionalGraph that represents a transactional context independent of the executing transaction.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
ITransactionalGraph NewTransaction()
```

VB

```
Function NewTransaction As ITransactionalGraph
```

C++

```
ITransactionalGraph^ NewTransaction()
```

F#

```
abstract NewTransaction : unit -> ITransactionalGraph
```

Return Value

Type: [ITransactionalGraph](#)

A transactional context. Invoking TransactionalGraph.shutdown() successfully commits the transaction.

See Also

[IThreadedTransactionalGraph Interface](#)

[VelocityGraph.Frontenac.Blueprints Namespace](#)

ITransactionalGraph Interface

A transactional graph supports the notion of transactions. A transaction scopes a logically coherent operation composed of multiple read and write operations that either occurs at once or not at all. The exact notion of a transaction and its isolational guarantees depend on the implementing graph database. A transaction scopes a coherent and complete operations. Any element references created during a transaction should not be accessed outside its scope (i.e. after the transaction is committed or rolled back). Accessing such references outside the transactional context they were created in may lead to exceptions. If such access is necessary, the transactional context should be extended. By default, the first operation on a TransactionalGraph will start a transaction automatically.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface ITransactionalGraph : IGraph
```

VB

```
Public Interface ITransactionalGraph
    Inherits IGraph
```

C++

```
public interface class ITransactionalGraph : IGraph
```

F#

```
type ITransactionalGraph =
    interface
        interface IGraph
    end
```

The **ITransactionalGraph** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------|-----------------------------------------------------------------------------------------|
|  | Commit | Stop the current transaction and successfully apply mutations to the graph. |
|  | Rollback | Stop the current transaction and drop any mutations applied since the last transaction. |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------|-----------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers.) |
|  CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers.) |

IVertex Interface

A vertex maintains pointers to both a set of incoming and outgoing edges. The outgoing edges are those edges for which the vertex is the tail. The incoming edges are those edges for which the vertex is the head. Diagrammatically, ---inEdges---> vertex ---outEdges--->.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IVertex : IElement,
    IDictionary<string, Object>, ICollection<KeyValuePair<string, Object>>,
    IEnumerable<KeyValuePair<string, Object>>, IEnumerable,
    IDictionary, ICollection
```

VB

```
Public Interface IVertex
    Inherits IElement, IDictionary(Of String, Object),
    ICollection(Of KeyValuePair(Of String, Object)), IEnumerable(Of
KeyValuePair(Of String, Object)),
    IEnumerable, IDictionary, ICollection
```

C++

```
public interface class IVertex : IElement,
    IDictionary<String^, Object^>, ICollection<KeyValuePair<String^,
Object^>>,
    IEnumerable<KeyValuePair<String^, Object^>>, IEnumerable,
    IDictionary, ICollection
```

F#

```
type IVertex =
    interface
        interface IElement
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
        interface IDictionary
        interface ICollection
    end
```

The **IVertex** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------|--------------------------------------------------------------------------------------------|
|  | AddEdge | Add a new outgoing edge from this vertex to the parameter vertex with provided edge label. |

| | |
|---------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  GetEdges | Return the edges incident to the vertex according to the provided direction and edge labels. |
|  GetVertices | Return the vertices adjacent to the vertex according to the provided direction and edge labels. This method does not remove duplicate vertices (i.e. those vertices that are connected by more than one edge). |
|  Query | Generate a query object that can be used to fine tune which edges/vertices are retrieved that are incident/adjacent to this vertex. |

Extension Methods

| Name | Description |
|------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers.) |
|  CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers.) |
|  GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers.) |
|  HaveEqualEdges | Test whether the two vertices have equal edge sets (Defined by VertexHelpers.) |
|  HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers.) |
|  HaveEqualNeighborhood | Test whether the two vertices have equal properties and edge sets. (Defined by VertexHelpers.) |
|  HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers.) |
|  SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers.) |
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers.) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws <code>ArgumentException</code> whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers.) |
|  VertexString | (Defined by StringFactory.) |

IVertex.AddEdge Method

Add a new outgoing edge from this vertex to the parameter vertex with provided edge label.

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IEdge AddEdge(  
    Object id,  
    string label,  
    IVertex inVertex  
)
```

VB

```
Function AddEdge (  
    id As Object,  
    label As String,  
    inVertex As IVertex  
) As IEdge
```

C++

```
IEdge^ AddEdge(  
    Object^ id,  
    String^ label,  
    IVertex^ inVertex  
)
```

F#

```
abstract AddEdge :  
    id : Object *  
    label : string *  
    inVertex : IVertex -> IEdge
```

Parameters

id

Type: [System.Object](#)

the id of the edge

label

Type: [System.String](#)

the label of the edge

inVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="inVertex"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.IVertex.AddEdge(System.Object,System.String,VelocityGraph.Frontenac.Blueprints.IVertex)"]

Return Value

Parameter Constructor

Initializes a new instance of the [Parameter](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Parameter(  
    Object key,  
    Object value  
)
```

VB

```
Public Sub New (  
    key As Object,  
    value As Object  
)
```

C++

```
public:  
Parameter(  
    Object^ key,  
    Object^ value  
)
```

F#

```
new :  
    key : Object *  
    value : Object -> Parameter
```

Parameters

key

Type: [System.Object](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Parameter.#ctor(System.Object,System.Object)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Parameter.#ctor(System.Object,System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override bool Equals(  
    Object obj  
)
```

VB

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

C++

```
public:  
virtual bool Equals(  
    Object^ obj  
) override
```

F#

```
abstract Equals :  
    obj : Object -> bool  
override Equals :  
    obj : Object -> bool
```

Parameters

obj

Type: [System.Object](#)

[Missing <param name="obj"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Parameter.Equals(System.Object)"]

Return Value

Type: [Boolean](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Parameter.Equals(System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override int GetHashCode()
```

VB

```
Public Overrides Function GetHashCode As Integer
```

C++

```
public:  
virtual int GetHashCode() override
```

F#

```
abstract GetHashCode : unit -> int  
override GetHashCode : unit -> int
```

Return Value

Type: [Int32](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Parameter.GetHashCode"]

QueryContract.ValidateHas(T) Method (String, Compare, T)

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Contracts.QueryContract.ValidateHas`1(System.String,VelocityGraph.Frontenac.Blueprints.Compare,`0)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Contracts](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void ValidateHas<T>(
    string key,
    Compare compare,
    T value
)
```

VB

```
Public Shared Sub ValidateHas(Of T) (
    key As String,
    compare As Compare,
    value As T
)
```

C++

```
public:
    generic<typename T>
    static void ValidateHas(
        String^ key,
        Compare compare,
        T value
    )
```

F#

```
static member ValidateHas :
    key : string *
    compare : Compare *
    value : 'T -> unit
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Contracts.QueryContract.ValidateHas`1(System.String,VelocityGraph.Frontenac.Blueprints.Compare,`0)"]

compare

Type: [VelocityGraph.Frontenac.Blueprints.Compare](#)

[Missing <param name="compare"/> documentation for
"M:VelocityGraph.Frontenac.Blueprints.Contracts.QueryContract.ValidateHas`1(System.String,VelocityGraph.Frontenac.Blueprints.Compare,`0)"]

value

Type: *T*

[Missing <param name="value"/> documentation for
"M:VelocityGraph.Frontenac.Blueprints.Contracts.QueryContract.ValidateHas`1(System.String,VelocityGraph.Frontenac.Blueprints.Compare,`0)"]

Type Parameters

T

[Missing <typeparam name="T"/> documentation for
"M:VelocityGraph.Frontenac.Blueprints.Contracts.QueryContract.ValidateHas`1(System.String,VelocityGraph.Frontenac.Blueprints.Compare,`0)"]

        interface IGraph
    end
```

The **ThreadedTransactionalGraphContract** type exposes the following members.

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------|-------------|
|  | Features | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------------------|-------------|
|  | AddEdge | |
|  | AddVertex | |
|  | Commit | |
|  | GetEdge | |
|  | GetEdges() | |
|  | GetEdges(String, Object) | |
|  | GetVertex | |
|  | GetVertices() | |
|  | GetVertices(String, Object) | |
|  | NewTransaction | |
|  | Query | |
|  | RemoveEdge | |
|  | RemoveVertex | |
|  | Rollback | |
|  | Shutdown | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  | CreateTinkerGraph | (Defined by GraphHelpers .) |
|  | GraphString | (Defined by StringFactory .) |
|  | LoadGml | (Defined by GraphHelpers .) |
|  | LoadGraphml | (Defined by GraphHelpers .) |
|  | LoadGraphson | (Defined by GraphHelpers .) |
|  | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have |

| | | |
|-----------------------------------------------------------------------------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |
|  | SaveDotNet | (Defined by GraphHelpers.) |
|  | SaveGml | (Defined by GraphHelpers.) |
|  | SaveGraphml | (Defined by GraphHelpers.) |
|  | SaveGraphson | (Defined by GraphHelpers.) |

[GeoCircle Class](#)

[VelocityGraph.Frontenac.Blueprints.Geo Namespace](#)

GeoCircle Constructor (GeoPoint, Double)

Initializes a new instance of the [GeoCircle](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Geo](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public GeoCircle(  
    GeoPoint center,  
    double radius  
)
```

VB

```
Public Sub New (  
    center As GeoPoint,  
    radius As Double  
)
```

C++

```
public:  
GeoCircle(  
    GeoPoint^ center,  
    double radius  
)
```

F#

```
new :  
    center : GeoPoint *  
    radius : float -> GeoCircle
```

Parameters

center

Type: [VelocityGraph.Frontenac.Blueprints.Geo.GeoPoint](#)

[Missing <param name="center"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Geo.GeoCircle.#ctor(VelocityGraph.Frontenac.Blueprints.Geo.GeoPoint,System.Double)"]

radius

Type: [System.Double](#)

[Missing <param name="radius"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Geo.GeoCircle.#ctor(VelocityGraph.Frontenac.Blueprints.Geo.GeoPoint,System.Double)"]

TinkerGraph Class

An in-memory, reference implementation of the property TinkerGraph interfaces provided by Blueprints.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Impls.TG.TinkerGraph

Namespace: [VelocityGraph.Frontenac.Blueprints.Impls.TG](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
[SerializableAttribute]
public class TinkerGraph : IIndexableGraph,
    IGraph, IKeyIndexableGraph
```

VB

```
<SerializableAttribute>
Public Class TinkerGraph
    Implements IIndexableGraph, IGraph, IKeyIndexableGraph
```

C++

```
[SerializableAttribute]
public ref class TinkerGraph : IIndexableGraph,
    IGraph, IKeyIndexableGraph
```

F#

```
[<SerializableAttribute>]
type TinkerGraph =
    class
        interface IIndexableGraph
        interface IGraph
        interface IKeyIndexableGraph
    end
```

The **TinkerGraph** type exposes the following members.

Constructors

| Name | Description |
|-----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|
|  TinkerGraph() | Initializes a new instance of the TinkerGraph class |
|  TinkerGraph(String) | Initializes a new instance of the TinkerGraph class |
|  TinkerGraph(String, TinkerGraph.FileType) | Initializes a new instance of the TinkerGraph class |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------|-------------|
|  | Features | |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------------|-------------------------------------------------|
|  | AddEdge | |
|  | AddVertex | |
|  | Clear | |
|  | CreateIndex | |
|  | CreateKeyIndex | |
|  | DropIndex | |
|  | DropKeyIndex | |
|  | GetEdge | |
|  | GetEdges() | |
|  | GetEdges(String, Object) | |
|  | GetIndex | |
|  | GetIndexedKeys | |
|  | GetIndices | |
|  | GetVertex | |
|  | GetVertices() | |
|  | GetVertices(String, Object) | |
|  | Query | |
|  | RemoveEdge | |
|  | RemoveVertex | |
|  | Shutdown | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddUniqueVertex | Add a vertex to a graph only if no other vertex in the provided Index is indexed by the property key/value pair. If a vertex already exists with that key/value pair, return the pre-existing vertex. (Defined by IndexableGraphHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers.) |
|  CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers.) |
|  CreateTinkerGraph | (Defined by GraphHelpers.) |
|  GraphString | (Defined by StringFactory.) |
|  LoadGml | (Defined by GraphHelpers.) |
|  LoadGraphml | (Defined by GraphHelpers.) |
|  LoadGraphson | (Defined by GraphHelpers.) |
|  ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |
|  SaveDotNet | (Defined by GraphHelpers.) |
|  SaveGml | (Defined by GraphHelpers.) |
|  SaveGraphml | (Defined by GraphHelpers.) |
|  SaveGraphson | (Defined by GraphHelpers.) |

TinkerGraph.Features Property

[Missing <summary> documentation for "P:VelocityGraph.Frontenac.Blueprints.Impls.TG.TinkerGraph.Features"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Impls.TG](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual Features Features { get; }
```

VB

```
Public Overridable ReadOnly Property Features As Features  
    Get
```

C++

```
public:  
virtual property Features^ Features {  
    Features^ get ();  
}
```

F#

```
abstract Features : Features with get  
override Features : Features with get
```

Property Value

Type: [Features](#)

Implements

[IGraph.Features](#)

TinkerGraph.TinkerGraph Methods

The [TinkerGraph](#) type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------------|-------------------------------------------------|
|  | AddEdge | |
|  | AddVertex | |
|  | Clear | |
|  | CreateIndex | |
|  | CreateKeyIndex | |
|  | DropIndex | |
|  | DropKeyIndex | |
|  | GetEdge | |
|  | GetEdges() | |
|  | GetEdges(String, Object) | |
|  | GetIndex | |
|  | GetIndexedKeys | |
|  | GetIndices | |
|  | GetVertex | |
|  | GetVertices() | |
|  | GetVertices(String, Object) | |
|  | Query | |
|  | RemoveEdge | |
|  | RemoveVertex | |
|  | Shutdown | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddUniqueVertex | Add a vertex to a graph only if no other vertex in the provided Index is indexed by the property key/value pair. If a vertex already exists with that key/value pair, return the pre-existing vertex. (Defined by IndexableGraphHelpers .) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers.) |
|  CreateTinkerGraph | (Defined by GraphHelpers.) |
|  GraphString | (Defined by StringFactory.) |
|  LoadGml | (Defined by GraphHelpers.) |
|  LoadGraphml | (Defined by GraphHelpers.) |
|  LoadGraphson | (Defined by GraphHelpers.) |
|  ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |
|  SaveDotNet | (Defined by GraphHelpers.) |
|  SaveGml | (Defined by GraphHelpers.) |
|  SaveGraphml | (Defined by GraphHelpers.) |
|  SaveGraphson | (Defined by GraphHelpers.) |

TinkerGraph.AddEdge Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Impls.TG.TinkerGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Impls.TG](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public virtual IEdge AddEdge (  
    Object id,  
    IVertex outVertex,  
    IVertex inVertex,  
    string label  
)
```

VB

```
Public Overridable Function AddEdge (  
    id As Object,  
    outVertex As IVertex,  
    inVertex As IVertex,  
    label As String  
) As IEdge
```

C++

```
public:  
virtual IEdge^ AddEdge (  
    Object^ id,  
    IVertex^ outVertex,  
    IVertex^ inVertex,  
    String^ label  
)
```

F#

```
abstract AddEdge :  
    id : Object *  
    outVertex : IVertex *  
    inVertex : IVertex *  
    label : string -> IEdge  
override AddEdge :  
    id : Object *  
    outVertex : IVertex *  
    inVertex : IVertex *  
    label : string -> IEdge
```

Parameters

id

Type: [System.Object](#)

[Missing <param name="id"/> documentation for
"M:VelocityGraph.Frontenac.Blueprints.Impls.TG.TinkerGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

outVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="outVertex"/> documentation for
"M:VelocityGraph.Frontenac.Blueprints.Impls.TG.TinkerGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

inVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="inVertex"/> documentation for
"M:VelocityGraph.Frontenac.Blueprints.Impls.TG.TinkerGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

label

Type: [System.String](#)

[Missing <param name="label"/> documentation for
"M:VelocityGraph.Frontenac.Blueprints.Impls.TG.TinkerGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Return Value

Type: [IEdge](#)

[Missing <returns> documentation for
"M:VelocityGraph.Frontenac.Blueprints.Impls.TG.TinkerGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Implements

TinkerMetadataReader Class

Reads TinkerGraph metadata from a Stream.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Impls.TG.TinkerMetadataReader

Namespace: [VelocityGraph.Frontenac.Blueprints.Impls.TG](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class TinkerMetadataReader
```

VB

```
Public Class TinkerMetadataReader
```

C++

```
public ref class TinkerMetadataReader
```

F#

```
type TinkerMetadataReader = class end
```

The **TinkerMetadataReader** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------------|---------------------------------------------------------------------|
|  | TinkerMetadataReader | Initializes a new instance of the TinkerMetadataReader class |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------------|------------------------------------------|
|  | Load(Stream) | Read TinkerGraph metadata from a Stream. |
|  | Load(String) | Read TinkerGraph metadata from a file. |
|  | Load(TinkerGraph, Stream) | Read TinkerGraph metadata from a Stream. |
|  | Load(TinkerGraph, String) | Read TinkerGraph metadata from a file. |

Classes

| Class | Description |
|----------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  DefaultGraphQuery | For those graph engines that do not support the low-level querying of the vertices or edges, then DefaultQuery can be used. DefaultQuery assumes, at minimum, that Graph.getVertices() and Graph.getEdges() is implemented by the respective Graph. |
|  DefaultQuery | |
|  DefaultQuery.HasContainer | |
|  DefaultVertexQuery | For those graph engines that do not support the low-level querying of the edges of a vertex, then DefaultVertexQuery can be used. DefaultVertexQuery assumes, at minimum, that Vertex.getOutEdges() and Vertex.getInEdges() is implemented by the respective Vertex. |
|  EdgeHelpers | |
|  ElementHelpers | |
|  ExceptionFactory | The ExceptionFactory provides standard exceptions that should be used by all Blueprints implementations. This ensures that the look-and-feel of all implementations are the same in terms of terminology and punctuation. |
|  GraphHelpers | |
|  IndexableGraphHelpers | |
|  KeyIndexableGraphHelpers | |
|  Multiterable(TS) | A helper class that is used to combine multiple iterables into a single closeable IEnumerable. |
|  PropertyFilteredIterable(T) | This is a helper class for filtering an IEnumerable of elements by their key/value. Useful for Graph implementations that do not support automatic key indices and need to filter on Graph.getVertices/Edges(key,value). |
|  StringFactory | A collection of helpful methods for creating standard toString() representations of graph-related objects. |
|  VertexHelpers | |
|  VerticesFromEdgesIterable | VerticesFromEdgesIterable is a helper class that returns vertices that meet the direction/label criteria of the incident edges. |
|  WrappingCloseableIterable(T) | |

DefaultGraphQuery Class

For those graph engines that do not support the low-level querying of the vertices or edges, then DefaultQuery can be used. DefaultQuery assumes, at minimum, that Graph.getVertices() and Graph.getEdges() is implemented by the respective Graph.

Inheritance Hierarchy

[System.Object](#)

[VelocityGraph.Frontenac.Blueprints.Util.DefaultQuery](#)

VelocityGraph.Frontenac.Blueprints.Util.DefaultGraphQuery

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class DefaultGraphQuery : DefaultQuery
```

VB

```
Public Class DefaultGraphQuery
    Inherits DefaultQuery
```

C++

```
public ref class DefaultGraphQuery : public DefaultQuery
```

F#

```
type DefaultGraphQuery =
    class
        inherit DefaultQuery
    end
```

The **DefaultGraphQuery** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------------|------------------------------------------------------------------|
|  | DefaultGraphQuery | Initializes a new instance of the DefaultGraphQuery class |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------|--------------------------------------------------------|
|  | Edges | (Overrides DefaultQuery.Edges(.) .) |
|  | Vertices | (Overrides DefaultQuery.Vertices(.) .) |

C++

```
public ref class DefaultVertexQuery : public DefaultQuery,
    IVertexQuery, IQuery
```

F#

```
type DefaultVertexQuery =
    class
        inherit DefaultQuery
        interface IVertexQuery
        interface IQuery
    end
```

The **DefaultVertexQuery** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|-------------------------------------------------------------------|
|  | DefaultVertexQuery | Initializes a new instance of the DefaultVertexQuery class |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------|-------------------------------------------------------|
|  | Count | |
|  | Direction | |
|  | Edges | (Overrides DefaultQuery.Edges() .) |
|  | Labels | |
|  | VertexIds | |
|  | Vertices | (Overrides DefaultQuery.Vertices() .) |

DefaultVertexQuery Constructor

Initializes a new instance of the [DefaultVertexQuery](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public DefaultVertexQuery(  
    IVertex vertex  
)
```

VB

```
Public Sub New (  
    vertex As IVertex  
)
```

C++

```
public:  
DefaultVertexQuery(  
    IVertex^ vertex  
)
```

F#

```
new :  
    vertex : IVertex -> DefaultVertexQuery
```

Parameters

vertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="vertex"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.DefaultVertexQuery.#ctor(VelocityGraph.Frontenac.Blueprints.IVertex)"]

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.EdgeHelpers

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static class EdgeHelpers
```

VB

```
<ExtensionAttribute>  
Public NotInheritable Class EdgeHelpers
```

C++

```
[ExtensionAttribute]  
public ref class EdgeHelpers abstract sealed
```

F#

```
[<AbstractClassAttribute>]  
[<SealedAttribute>]  
[<ExtensionAttribute>]  
type EdgeHelpers = class end
```

The **EdgeHelpers** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
|   | RelabelEdge | An edge is relabeled by creating a new edge with the same properties, but new label. Note that an edge is deleted and an edge is added. |
|   | RelabelEdges | Edges are relabeled by creating new edges with the same properties, but new label. Note that for each edge is deleted and an edge is added. |

EdgeHelpers.RelabelEdge Method

An edge is relabeled by creating a new edge with the same properties, but new label. Note that an edge is deleted and an edge is added.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static IEdge RelabelEdge(
    this IEdge oldEdge,
    IGraph graph,
    Object newId,
    string newLabel
)
```

VB

```
<ExtensionAttribute>
Public Shared Function RelabelEdge (
    oldEdge As IEdge,
    graph As IGraph,
    newId As Object,
    newLabel As String
) As IEdge
```

C++

```
public:
[ExtensionAttribute]
static IEdge^ RelabelEdge(
    IEdge^ oldEdge,
    IGraph^ graph,
    Object^ newId,
    String^ newLabel
)
```

F#

```
[<ExtensionAttribute>]
static member RelabelEdge :
    oldEdge : IEdge *
    graph : IGraph *
    newId : Object *
    newLabel : string -> IEdge
```

Parameters

oldEdge

Type: [VelocityGraph.Frontenac.Blueprints.IEdge](#)

the existing edge to "relabel"

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)
the graph to add the new edge to

newId

Type: [System.Object](#)
the id of the new edge

newLabel

Type: [System.String](#)
the label of the new edge

Return Value

Type: [IEdge](#)
the newly created edge

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IEdge](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

[VelocityGraph.Frontenac.Blueprints.Util Namespace](#)

EdgeHelpers.RelabelEdges Method

Edges are relabeled by creating new edges with the same properties, but new label. Note that for each edge is deleted and an edge is added.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void RelabelEdges (
    this IEnumerable<IEdge> oldEdges,
    IGraph graph,
    string newLabel
)
```

VB

```
<ExtensionAttribute>
Public Shared Sub RelabelEdges (
    oldEdges As IEnumerable(Of IEdge),
    graph As IGraph,
    newLabel As String
)
```

C++

```
public:
[ExtensionAttribute]
static void RelabelEdges (
    IEnumerable<IEdge^>^ oldEdges,
    IGraph^ graph,
    String^ newLabel
)
```

F#

```
[<ExtensionAttribute>]
static member RelabelEdges :
    oldEdges : IEnumerable<IEdge> *
    graph : IGraph *
    newLabel : string -> unit
```

Parameters

oldEdges

Type: [System.Collections.Generic.IEnumerable\(IEdge\)](#)

the existing edges to "relabel"

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to add the new edge to

newLabel

Type: [System.String](#)

the label of the new edge

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IEnumerable\(IEdge\)](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

VelocityGraph.Frontenac.Blueprints.Util.ElementHelpers

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static class ElementHelpers
```

VB

```
<ExtensionAttribute>  
Public NotInheritable Class ElementHelpers
```

C++

```
[ExtensionAttribute]  
public ref class ElementHelpers abstract sealed
```

F#

```
[<AbstractClassAttribute>]  
[<SealedAttribute>]  
[<ExtensionAttribute>]  
type ElementHelpers = class end
```

The **ElementHelpers** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|   | AreEqual | A standard method for determining if two elements are equal. This method should be used by any Element.equals() implementation to ensure consistent behavior. |
|   | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. ElementPropertiesRule that share the same key on the to element are overwritten. |
|   | GetProperties | Get a clone of the properties of the provided element. In other words, a HashMap is created and filled with the key/values of the element's properties. |

| | | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|   | HaveEqualIds | Simply tests if the element ids are equal(). |
|   | HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). |
|   | RemoveProperties | Clear all the properties from an IEnumerable of elements. |
|   | RemoveProperty | Remove a property from all elements in the provided IEnumerable. |
|   | RenameProperty | Renames a property by removing the old key and adding the stored value to the new key. If property does not exist, nothing occurs. |
|   | SetProperties(IElement, IDictionary(String, Object)) | Set the properties of the provided element using the provided dictionary. |
|   | SetProperties(IElement, Object[]) | Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. |
|   | TypecastProperty | Typecasts a property value. This only works for casting to a class that has a constructor of the for new X(string). If no such constructor exists, an Exception is thrown and the original element property is left unchanged. |
|   | ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws ArgumentException whether the triple is legal and if not, a clear reason message is provided |

ElementHelpers.AreEqual Method

A standard method for determining if two elements are equal. This method should be used by any `Element.equals()` implementation to ensure consistent behavior.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static bool AreEqual(  
    this IElement a,  
    Object b  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Function AreEqual (  
    a As IElement,  
    b As Object  
) As Boolean
```

C++

```
public:  
[ExtensionAttribute]  
static bool AreEqual(  
    IElement^ a,  
    Object^ b  
)
```

F#

```
[<ExtensionAttribute>]  
static member AreEqual :  
    a : IElement *  
    b : Object -> bool
```

Parameters

a

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

The first element

b

Type: [System.Object](#)

The second element (as an object)

VelocityDB Class Library

Return Value

Type: [Boolean](#)

Whether the two elements are equal

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IElement](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

ElementHelpers.RemoveProperties Method

Clear all the properties from an IEnumerable of elements.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void RemoveProperties (  
    this IEnumerable<IElement> elements  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Sub RemoveProperties (  
    elements As IEnumerable(Of IElement)  
)
```

C++

```
public:  
[ExtensionAttribute]  
static void RemoveProperties (  
    IEnumerable<IElement^>^ elements  
)
```

F#

```
[<ExtensionAttribute>]  
static member RemoveProperties :  
    elements : IEnumerable<IElement> -> unit
```

Parameters

elements

Type: [System.Collections.Generic.IEnumerable\(IElement\)](#)

the elements to remove properties from

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IEnumerable\(IElement\)](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

ElementHelpers.RemoveProperty Method

Remove a property from all elements in the provided IEnumerable.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void RemoveProperty(  
    this IEnumerable<IElement> elements,  
    string key  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Sub RemoveProperty (  
    elements As IEnumerable(Of IElement),  
    key As String  
)
```

C++

```
public:  
[ExtensionAttribute]

)
```

F#

```
[<ExtensionAttribute>]  
static member RemoveProperty :  
    elements : IEnumerable<IElement> *  
    key : string -> unit
```

Parameters

elements

Type: [System.Collections.Generic.IEnumerable\(IElement\)](#)

the elements to remove the property from

key

Type: [System.String](#)

the property to remove by key

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IEnumerable\(IElement\)](#). When you use instance method syntax to call this method, omit the first

VelocityDB Class Library

parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

ElementHelpers.RenameProperty Method

Renames a property by removing the old key and adding the stored value to the new key. If property does not exist, nothing occurs.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void RenameProperty(  
    this IEnumerable<IElement> elements,  
    string oldKey,  
    string newKey  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Sub RenameProperty (  
    elements As IEnumerable(Of IElement),  
    oldKey As String,  
    newKey As String  
)
```

C++

```
public:  
[ExtensionAttribute]  
static void RenameProperty(  
    IEnumerable<IElement^>^ elements,  
    String^ oldKey,  
    String^ newKey  
)
```

F#

```
[<ExtensionAttribute>]  
static member RenameProperty :  
    elements : IEnumerable<IElement> *  
    oldKey : string *  
    newKey : string -> unit
```

Parameters

elements

Type: [System.Collections.Generic.IEnumerable\(IElement\)](#)

the elements to rename

oldKey

Type: [System.String](#)

the key to rename

newKey

Type: [System.String](#)
the key to rename to

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IEnumerable\(IElement\)](#). When you use instance method syntax to call this method, omit the first parameter. [SetProperties Overload](#)

[VelocityGraph.Frontenac.Blueprints.Util Namespace](#)

ElementHelpers.TypecastProperty Method

Typecasts a property value. This only works for casting to a class that has a constructor of the form new X(string). If no such constructor exists, an Exception is thrown and the original element property is left unchanged.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void TypecastProperty(
    this IEnumerable<IElement> elements,
    string key,
    Type classCast
)
```

VB

```
<ExtensionAttribute>
Public Shared Sub TypecastProperty (
    elements As IEnumerable(Of IElement),
    key As String,
    classCast As Type
)
```

C++

```
public:
[ExtensionAttribute]
static void TypecastProperty(
    IEnumerable<IElement^>^ elements,
    String^ key,
    Type^ classCast
)
```

F#

```
[<ExtensionAttribute>]
static member TypecastProperty :
    elements : IEnumerable<IElement> *
    key : string *
    classCast : Type -> unit
```

Parameters

elements

Type: [System.Collections.Generic.IEnumerable<IElement>](#)
the elements to have their property typecasted

key

Type: [System.String](#)

the key for the property value to typecast

classCast

Type: [System.Type](#)

the class to typecast to

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IEnumerable\(IElement\)](#). When you use instance method syntax to call this method, omit the first parameter. ElementHelpers.ValidateProperty Method

Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws ArgumentException whether the triple is legal and if not, a clear reason message is provided

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void ValidateProperty(  
    this IElement element,  
    string key,  
    Object value  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Sub ValidateProperty (  
    element As IElement,  
    key As String,  
    value As Object  
)
```

C++

```
public:  
[ExtensionAttribute]  
static void ValidateProperty(  
    IElement^ element,  
    String^ key,  
    Object^ value  
)
```

F#

```
[<ExtensionAttribute>]  
static member ValidateProperty :  
    element : IElement *  
    key : string *  
    value : Object -> unit
```

Parameters

element

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)
the element for the property to be set

key

Type: [System.String](#)

VelocityDB Class Library

the key of the property

value

Type: [System.Object](#)

the value of the property

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IElement](#). When you use instance method syntax to call this method, omit the first parameter. ExceptionFactory Class

The ExceptionFactory provides standard exceptions that should be used by all Blueprints implementations. This ensures that the look-and-feel of all implementations are the same in terms of terminology and punctuation.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.ExceptionFactory

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static class ExceptionFactory
```

VB

```
Public NotInheritable Class ExceptionFactory
```

C++

```
public ref class ExceptionFactory abstract sealed
```

F#

```
[<AbstractClassAttribute>]  
[<SealedAttribute>]  
type ExceptionFactory = class end
```

The **ExceptionFactory** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------------|-------------|
|  | BothIsNotSupported | |
|  | ClassIsNotIndexable | |
|  | EdgeIdCanNotBeNull | |
|  | EdgeWithIdAlreadyExist | |
|  | IndexAlreadyExists | |
|  | IndexDoesNotSupportClass | |
|  | PropertyKeyCanNotBeEmpty | |
|  | PropertyKeyCanNotBeNull | |
|  | PropertyKeyIdIsReserved | |

VelocityDB Class Library

| | | |
|-----------------------------------------------------------------------------------|---------------------------------------------------|--|
|  | PropertyKeyIsReserved | |
|  | PropertyKeyLabelsReservedForEdges | |
|  | PropertyValueCanNotBeNull | |
|  | TransactionAlreadyStarted | |
|  | VertexIdCanNotBeNull | |
|  | VertexWithIdAlreadyExists | |

GraphHelpers.AddEdge Method

Add an edge to the graph with specified id and provided properties.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static IEdge AddEdge(
    this IGraph graph,
    Object id,
    IVertex outVertex,
    IVertex inVertex,
    string label,
    params Object[] properties
)
```

VB

```
<ExtensionAttribute>
Public Shared Function AddEdge (
    graph As IGraph,
    id As Object,
    outVertex As IVertex,
    inVertex As IVertex,
    label As String,
    ParamArray properties As Object()
) As IEdge
```

C++

```
public:
[ExtensionAttribute]
static IEdge^ AddEdge(
    IGraph^ graph,
    Object^ id,
    IVertex^ outVertex,
    IVertex^ inVertex,
    String^ label,
    ... array<Object^>^ properties
)
```

F#

```
[<ExtensionAttribute>]
static member AddEdge :
    graph : IGraph *
    id : Object *
    outVertex : IVertex *
    inVertex : IVertex *
    label : string *
    properties : Object[] -> IEdge
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to create the edge in

id

Type: [System.Object](#)

the id of the edge to create

outVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

the outgoing/tail vertex of the edge

inVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

the incoming/head vertex of the edge

label

Type: [System.String](#)

the label of the edge

properties

Type: [System.Object\[\]](#)

the properties of the edge to add (must be string,object,string,object,...)

Return Value

Type: [IEdge](#)

the edge created in the graph with the provided properties set

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IGraph](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

GraphHelpers.AddVertex Method

Add a vertex to the graph with specified id and provided properties.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static IVertex AddVertex(  
    this IGraph graph,  
    Object id,  
    params Object[] properties  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Function AddVertex (  
    graph As IGraph,  
    id As Object,  
    ParamArray properties As Object()  
) As IVertex
```

C++

```
public:  
[ExtensionAttribute]  
static IVertex^ AddVertex(  
    IGraph^ graph,  
    Object^ id,  
    ... array<Object^>^ properties  
)
```

F#

```
[<ExtensionAttribute>]  
static member AddVertex :  
    graph : IGraph *  
    id : Object *  
    properties : Object[] -> IVertex
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to create a vertex in

id

Type: [System.Object](#)

the id of the vertex to create

properties

Type: [System.Object\[\]](#)

the properties of the vertex to add (must be string,object,string,object,...)

Return Value

Type: [IVertex](#)

the vertex created in the graph with the provided properties set

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IGraph](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

GraphHelpers.CopyGraph Method

Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void CopyGraph(  
    this IGraph from,  
    IGraph to  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Sub CopyGraph (  
    from As IGraph,  
    to As IGraph  
)
```

C++

```
public:  
[ExtensionAttribute]

    IGraph^ from,  
    IGraph^ to  
)
```

F#

```
[<ExtensionAttribute>]  
static member CopyGraph :  
    from : IGraph *  
    to : IGraph -> unit
```

Parameters

from

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to copy from

to

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to copy to

VelocityDB Class Library

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IGraph](#). When you use instance method syntax to call this method, omit the first parameter. IndexableGraphHelpers.AddUniqueVertex Method

Add a vertex to a graph only if no other vertex in the provided Index is indexed by the property key/value pair. If a vertex already exists with that key/value pair, return the pre-existing vertex.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static IVertex AddUniqueVertex(
    this IIndexableGraph graph,
    Object id,
    IIndex index,
    string uniqueKey,
    Object uniqueValue
)
```

VB

```
<ExtensionAttribute>
Public Shared Function AddUniqueVertex (
    graph As IIndexableGraph,
    id As Object,
    index As IIndex,
    uniqueKey As String,
    uniqueValue As Object
) As IVertex
```

C++

```
public:
[ExtensionAttribute]
static IVertex^ AddUniqueVertex(
    IIndexableGraph^ graph,
    Object^ id,
    IIndex^ index,
    String^ uniqueKey,
    Object^ uniqueValue
)
```

F#

```
[<ExtensionAttribute>]
static member AddUniqueVertex :
    graph : IIndexableGraph *
    id : Object *
    index : IIndex *
    uniqueKey : string *
    uniqueValue : Object -> IVertex
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IIndexableGraph](#)

the graph to add the vertex to

id

Type: [System.Object](#)

the id of the vertex to create (can be null)

index

Type: [VelocityGraph.Frontenac.Blueprints.IIndex](#)

the index to determine if another vertex with the same key/value exists

uniqueKey

Type: [System.String](#)

the key to check on for uniqueness of the vertex

uniqueValue

Type: [System.Object](#)

the value to check on for uniqueness of the vertex

Return Value

Type: [IVertex](#)

the newly created vertex or the vertex that satisfies the uniqueness criteria

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IIndexableGraph](#). When you use instance method syntax to call this method, omit the first parameter. Multiterable(TS) Class

A helper class that is used to combine multiple iterables into a single closeable IEnumerable.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Multiterable(TS)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class MultiIterable<TS> : ICloseableIterable<TS>,
    IDisposable, IEnumerable<TS>, IEnumerable
```

VB

```
Public Class MultiIterable(Of TS)
    Implements ICloseableIterable(Of TS), IDisposable, IEnumerable(Of TS),
    IEnumerable
```

C++

```
generic<typename TS>
public ref class MultiIterable : ICloseableIterable<TS>,
    IDisposable, IEnumerable<TS>, IEnumerable
```

F#

```
type MultiIterable<'TS> =
    class
        interface ICloseableIterable<'TS>
        interface IDisposable
        interface IEnumerable<'TS>
        interface IEnumerable
    end
```

Type Parameters

TS

[Missing <typeparam name="TS"/> documentation for "T:VelocityGraph.Frontenac.Blueprints.Util.Multiterable`1"]

The Multiterable(TS) type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------------------|----------------------------------------------------------|
|  | Multiterable(TS) | Initializes a new instance of the Multiterable(TS) class |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------|-----------------------------------------------------|
|  | Dispose | Releases all resources used by the Multiterable(TS) |
|  | GetEnumerator | |

PropertyFilteredIterable(T) Class

This is a helper class for filtering an IEnumerable of elements by their key/value. Useful for Graph implementations that do not support automatic key indices and need to filter on Graph.getVertices/Edges(key,value).

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.PropertyFilteredIterable(T)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class PropertyFilteredIterable<T> : ICloseableIterable<T>,
    IDisposable, IEnumerable<T>, IEnumerable
where T : class, IElement
```

VB

```
Public Class PropertyFilteredIterable(Of T As {Class, IElement})
    Implements ICloseableIterable(Of T), IDisposable, IEnumerable(Of T),
    IEnumerable
```

C++

```
generic<typename T>
where T : ref class, IElement
public ref class PropertyFilteredIterable : ICloseableIterable<T>,
    IDisposable, IEnumerable<T>, IEnumerable
```

F#

```
type PropertyFilteredIterable<'T when 'T : not struct and IElement> =
    class
        interface ICloseableIterable<'T>
        interface IDisposable
        interface IEnumerable<'T>
        interface IEnumerable
    end
```

Type Parameters

T

[Missing <typeparam name="T"/> documentation for "T:VelocityGraph.Frontenac.Blueprints.Util.PropertyFilteredIterable`1"]

The PropertyFilteredIterable(T) type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------------------|---------------------------------------------------------------------|
|  | PropertyFilteredIterable(T) | Initializes a new instance of the PropertyFilteredIterable(T) class |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------|----------------------------------------------------------------|
|  | Dispose | Releases all resources used by the PropertyFilteredIterable(T) |
|  | GetEnumerator | |

PropertyFilteredIterable(T) Constructor

Initializes a new instance of the [PropertyFilteredIterable\(T\)](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public PropertyFilteredIterable(  
    string key,  
    Object value,  
    IEnumerable<T> iterable  
)
```

VB

```
Public Sub New (  
    key As String,  
    value As Object,  
    iterable As IEnumerable(Of T)  
)
```

C++

```
public:  
PropertyFilteredIterable(  
    String^ key,  
    Object^ value,  
    IEnumerable<T>^ iterable  
)
```

F#

```
new :  
    key : string *  
    value : Object *  
    iterable : IEnumerable<'T> -> PropertyFilteredIterable
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.PropertyFilteredIterable`1.#ctor(System.String,System.Object,System.Collections.Generic.IEnumerable{`0})"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.PropertyFilteredIterable`1.#ctor(System.String,System.Object,System.Collections.Generic.IEnumerable{`0})"]

iterable

Type: [System.Collections.Generic.IEnumerable\(T\)](#)

[Missing <param name="iterable"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.PropertyFilteredIterable`1.#ctor(System.String,System.Object,System.Collections.Generic.IEnumerable{`0})"]

See Also

PropertyFilteredIterable(T).PropertyFilteredIterable(T) Methods

The [PropertyFilteredIterable\(T\)](#) generic type exposes the following members.

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------|-------------|
|  | Dispose | |
|  | GetEnumerator | |

See Also

[PropertyFilteredIterable\(T\)Class](#)

[VelocityGraph.Frontenac.Blueprints.Util Namespace](#)

PropertyFilteredIterable(T).Dispose Method

Releases all resources used by the [PropertyFilteredIterable\(T\)](#)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void Dispose ()
```

VB

```
Public Sub Dispose
```

C++

```
public:  
virtual void Dispose () sealed
```

F#

```
abstract Dispose : unit -> unit  
override Dispose : unit -> unit
```

Implements

[IDisposable.Dispose\(\)](#)

See Also

PropertyFilteredIterable(T).GetEnumerator Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.PropertyFilteredIterable`1.GetEnumerator"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerator<T> GetEnumerator()
```

VB

```
Public Function GetEnumerator As IEnumerator(Of T)
```

C++

```
public:  
virtual IEnumerator<T>^ GetEnumerator() sealed
```

F#

```
abstract GetEnumerator : unit -> IEnumerator<'T>  
override GetEnumerator : unit -> IEnumerator<'T>
```

Return Value

Type: [IEnumerator\(T\)](#)

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.PropertyFilteredIterable`1.GetEnumerator"]

Implements

[IEnumerable\(T\).GetEnumerator\(\)](#)

StringFactory Class

A collection of helpful methods for creating standard toString() representations of graph-related objects.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.StringFactory

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static class StringFactory
```

VB

```
<ExtensionAttribute>  
Public NotInheritable Class StringFactory
```

C++

```
[ExtensionAttribute]  
public ref class StringFactory abstract sealed
```

F#

```
[<AbstractClassAttribute>]  
[<SealedAttribute>]  
[<ExtensionAttribute>]  
type StringFactory = class end
```

The **StringFactory** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------|-------------|
|  | EdgeString | |
|  | GraphString | |
|  | IndexString | |
|  | VertexString | |

Fields

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------|-------------|
|  | Arrow | |
|  | Colon | |

VelocityDB Class Library

| | | |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|--|
|   | Dash | |
|   | E | |
|   | EmptyString | |
|   | Id | |
|   | Label | |
|   | LBracket | |
|   | RBracket | |
|   | V | |

StringFactory.EdgeString Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.StringFactory.EdgeString(VelocityGraph.Frontenac.Blueprints.IEdge)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static string EdgeString(  
    this IEdge edge  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Function EdgeString (  
    edge As IEdge  
) As String
```

C++

```
public:  
[ExtensionAttribute]  
static String^ EdgeString(  
    IEdge^ edge  
)
```

F#

```
[<ExtensionAttribute>]  
static member EdgeString :  
    edge : IEdge -> string
```

Parameters

edge

Type: [VelocityGraph.Frontenac.Blueprints.IEdge](#)

[Missing <param name="edge"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.StringFactory.EdgeString(VelocityGraph.Frontenac.Blueprints.IEdge)"]

Return Value

Type: [String](#)

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.StringFactory.EdgeString(VelocityGraph.Frontenac.Blueprints.IEdge)"]

VelocityDB Class Library

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IEdge](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

VertexHelpers.HaveEqualEdges Method

Test whether the two vertices have equal edge sets

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static bool HaveEqualEdges (  
    this IVertex a,  
    IVertex b,  
    bool checkIdEquality  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Function HaveEqualEdges (  
    a As IVertex,  
    b As IVertex,  
    checkIdEquality As Boolean  
) As Boolean
```

C++

```
public:  
[ExtensionAttribute]  
static bool HaveEqualEdges (  
    IVertex^ a,  
    IVertex^ b,  
    bool checkIdEquality  
)
```

F#

```
[<ExtensionAttribute>]  
static member HaveEqualEdges :  
    a : IVertex *  
    b : IVertex *  
    checkIdEquality : bool -> bool
```

Parameters

a

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

the first vertex

b

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

the second vertex

VelocityDB Class Library

checkIdEquality

Type: [System.Boolean](#)

whether to check on vertex and edge ids

Return Value

Type: [Boolean](#)

whether the two vertices have the same edge sets

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IVertex](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

VertexHelpers.HaveEqualNeighborhood Method

Test whether the two vertices have equal properties and edge sets.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static bool HaveEqualNeighborhood(  
    this IVertex a,  
    IVertex b,  
    bool checkIdEquality  
)
```

VB

```
<ExtensionAttribute>  
Public Shared Function HaveEqualNeighborhood (  
    a As IVertex,  
    b As IVertex,  
    checkIdEquality As Boolean  
) As Boolean
```

C++

```
public:  
[ExtensionAttribute]  
static bool HaveEqualNeighborhood(  
    IVertex^ a,  
    IVertex^ b,  
    bool checkIdEquality  
)
```

F#

```
[<ExtensionAttribute>]  
static member HaveEqualNeighborhood :  
    a : IVertex *  
    b : IVertex *  
    checkIdEquality : bool -> bool
```

Parameters

a

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

the first vertex

b

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

the second vertex

VelocityDB Class Library

checkIdEquality

Type: [System.Boolean](#)

whether to check on vertex and edge ids

Return Value

Type: [Boolean](#)

whether the two vertices are semantically the same

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IVertex](#). When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

VerticesFromEdgesIterable Class

VerticesFromEdgesIterable is a helper class that returns vertices that meet the direction/label criteria of the incident edges.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.VerticesFromEdgesIterable

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class VerticesFromEdgesIterable : IEnumerable<IVertex>,
    IEnumerable
```

VB

```
Public Class VerticesFromEdgesIterable
    Implements IEnumerable(Of IVertex), IEnumerable
```

C++

```
public ref class VerticesFromEdgesIterable : IEnumerable<IVertex^>,
    IEnumerable
```

F#

```
type VerticesFromEdgesIterable =
    class
        interface IEnumerable<IVertex>
        interface IEnumerable
    end
```

The **VerticesFromEdgesIterable** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------------|--------------------------------------------------------------------------|
|  | VerticesFromEdgesIterable | Initializes a new instance of the VerticesFromEdgesIterable class |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------|-------------|
|  | GetEnumerator | |

[VelocityGraph.Frontenac.Blueprints.Util Namespace](#)

VerticesFromEdgesIterable Constructor

Initializes a new instance of the [VerticesFromEdgesIterable](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public VerticesFromEdgesIterable(  
    IVertex vertex,  
    Direction direction,  
    params string[] labels  
)
```

VB

```
Public Sub New (  
    vertex As IVertex,  
    direction As Direction,  
    ParamArray labels As String()  
)
```

C++

```
public:  
VerticesFromEdgesIterable(  
    IVertex^ vertex,  
    Direction direction,  
    ... array<String^>^ labels  
)
```

F#

```
new :  
    vertex : IVertex *  
    direction : Direction *  
    labels : string[] -> VerticesFromEdgesIterable
```

Parameters

vertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="vertex"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.VerticesFromEdgesIterable.#ctor(VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.Direction,System.String[])"

direction

Type: [VelocityGraph.Frontenac.Blueprints.Direction](#)

[Missing <param name="direction"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.VerticesFromEdgesIterable.#ctor(VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.Direction,System.String[])"

labels

Type: [System.String\[\]](#)

[Missing <param name="labels"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.VerticesFromEdgesIterable.#ctor(VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.Direction,System.String[])"]

VerticesFromEdgesIterable.GetEnumerator Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.VerticesFromEdgesIterable.GetEnumerator"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerator<IVertex> GetEnumerator()
```

VB

```
Public Function GetEnumerator As IEnumerator(Of IVertex)
```

C++

```
public:  
virtual IEnumerator<IVertex^> GetEnumerator() sealed
```

F#

```
abstract GetEnumerator : unit -> IEnumerator<IVertex>  
override GetEnumerator : unit -> IEnumerator<IVertex>
```

Return Value

Type: [IEnumerator<IVertex>](#)

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.VerticesFromEdgesIterable.GetEnumerator"]

Implements

[IEnumerable\(T\).GetEnumerator\(\)](#)

See Also

[VerticesFromEdgesIterable Class](#)

[VelocityGraph.Frontenac.Blueprints.Util Namespace](#)

WrappingCloseableIterable(T) Class

[Missing <summary> documentation for
"T:VelocityGraph.Frontenac.Blueprints.Util.WrappingCloseableIterable`1"]

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.WrappingCloseableIterable(T)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class WrappingCloseableIterable<T> : ICloseableIterable<T>,
    IDisposable, IEnumerable<T>, IEnumerable
```

VB

```
Public Class WrappingCloseableIterable(Of T)
    Implements ICloseableIterable(Of T), IDisposable, IEnumerable(Of T),
    IEnumerable
```

C++

```
generic<typename T>
public ref class WrappingCloseableIterable : ICloseableIterable<T>,
    IDisposable, IEnumerable<T>, IEnumerable
```

F#

```
type WrappingCloseableIterable<'T> =
    class
        interface ICloseableIterable<'T>
        interface IDisposable
        interface IEnumerable<'T>
        interface IEnumerable
    end
```

Type Parameters

T

[Missing <typeparam name="T"/> documentation for
"T:VelocityGraph.Frontenac.Blueprints.Util.WrappingCloseableIterable`1"]

The WrappingCloseableIterable(T) type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|----------------------------------------------|----------------------------------------------------------------------|
|  | WrappingCloseableIterable(T) | Initializes a new instance of the WrappingCloseableIterable(T) class |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------|-----------------------------------------------------------------|
|  | Dispose | Releases all resources used by the WrappingCloseableIterable(T) |
|  | GetEnumerator | |
|  | ToString | (Overrides Object.ToString() .) |

Namespace: [VelocityGraph.Frontenac.Blueprints.Util](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public WrappingCloseableIterable(  
    IEnumerable<T> iterable  
)
```

VB

```
Public Sub New (  
    iterable As IEnumerable(Of T)  
)
```

C++

```
public:  
WrappingCloseableIterable(  
    IEnumerable<T>^ iterable  
)
```

F#

```
new :  
    iterable : IEnumerable<'T> -> WrappingCloseableIterable
```

Parameters

iterable

Type: [System.Collections.Generic.IEnumerable\(T\)](#)

[Missing <param name="iterable"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.WrappingCloseableIterable`1.#ctor(System.Collections.Generic.IEnumerable{`0})"]

[Missing <summary> documentation for "N:VelocityGraph.Frontenac.Blueprints.Util.IO"]

Classes

| Class | Description |
|------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|
|  LexicographicalElementComparator | Elements are sorted in lexicographical order of IDs. |
|  StreamTokenizer | |

LexicographicalElementComparator Class

Elements are sorted in lexicographical order of IDs.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.IO.LexicographicalElementComparator

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class LexicographicalElementComparator : IComparer<IElement>
```

VB

```
Public Class LexicographicalElementComparator
    Implements IComparer(Of IElement)
```

C++

```
public ref class LexicographicalElementComparator : IComparer<IElement^>
```

F#

```
type LexicographicalElementComparator =
    class
        interface IComparer<IElement>
    end
```

The **LexicographicalElementComparator** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------|
|  | LexicographicalElementComparator | Initializes a new instance of the LexicographicalElementComparator class |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------|-------------|
|  | Compare | |

See Also

LexicographicalElementComparator.Compare Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.LexicographicalElementComparator.Compare(VelocityGraph.Frontenac.Blueprints.IElement,VelocityGraph.Frontenac.Blueprints.IElement)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public int Compare(  
    IElement a,  
    IElement b  
)
```

VB

```
Public Function Compare (  
    a As IElement,  
    b As IElement  
) As Integer
```

C++

```
public:  
virtual int Compare(  
    IElement^ a,  
    IElement^ b  
) sealed
```

F#

```
abstract Compare :  
    a : IElement *  
    b : IElement -> int  
override Compare :  
    a : IElement *  
    b : IElement -> int
```

Parameters

a

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

[Missing <param name="a"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.LexicographicalElementComparator.Compare(VelocityGraph.Frontenac.Blueprints.IElement,VelocityGraph.Frontenac.Blueprints.IElement)"]

b

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

[Missing <param name="b"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.LexicographicalElementComparator.Compare(VelocityGraph.Frontenac.Blueprints.IElement,VelocityGraph.Frontenac.Blueprints.IElement)"]

Return Value

Type: [Int32](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.LexicographicalElementComparator.Compare(VelocityGraph.Frontenac.Blueprints.IElement,VelocityGraph.Frontenac.Blueprints.IElement)"]

Implements

[IComparer\(T\).Compare\(T, T\)](#)

See Also

StreamTokenizer Class

[Missing <summary> documentation for "T:VelocityGraph.Frontenac.Blueprints.Util.IO.StreamTokenizer"]

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.IO.StreamTokenizer

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class StreamTokenizer : IEnumerable<int>,
    IEnumerable
```

VB

```
Public Class StreamTokenizer
    Implements IEnumerable(Of Integer), IEnumerable
```

C++

```
public ref class StreamTokenizer : IEnumerable<int>,
    IEnumerable
```

F#

```
type StreamTokenizer =
    class
        interface IEnumerable<int>
        interface IEnumerable
    end
```

The **StreamTokenizer** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------|----------------------------------------------------------------|
|  | StreamTokenizer | Initializes a new instance of the StreamTokenizer class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------|-------------|
|  | LineNumber | |
|  | LowerCaseMode | |
|  | NumberValue | |

| | | |
|-----------------------------------------------------------------------------------|------------------------------------|--|
|  | SlashSlashComments | |
|  | SlashStarComments | |
|  | StringValue | |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------------------|-------------------------------------------------|
|  | CommentChar | |
|  | EollsSignificant | |
|  | GetEnumerator | |
|  | NextToken | |
|  | OrdinaryChar | |
|  | OrdinaryChars | |
|  | ParseNumbers | |
|  | PushBack | |
|  | QuoteChar | |
|  | ResetSyntax | |
|  | ToString | (Overrides Object.ToString() .) |
|  | WhitespaceChars | |
|  | WordChars | |

Fields

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------|-------------|
|  | TtEof | |
|  | TtEol | |
|  | TtNumber | |
|  | TtWord | |
|  | Ttype | |

GmlReader Class

A reader for the Graph Modelling Language (GML).

(<http://www.fim.uni-passau.de/fileadmin/files/lehrstuhl/brandenburg/projekte/gml/gml-documentation.tar.gz>)

It's not clear that all nodes have to have IDs or that they have to be integers - we assume that this is the case. We also assume that only one graph can be defined in a file.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.IO.GML.GmlReader

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class GmlReader
```

VB

```
Public Class GmlReader
```

C++

```
public ref class GmlReader
```

F#

```
type GmlReader = class end
```

The **GmlReader** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------------|------------------------------------------------------------------------|
|  | GmlReader(IGraph) | Create a new GML reader (Uses default edge label DEFAULT_LABEL) |
|  | GmlReader(IGraph, String) | Create a new GML reader |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------------|----------------------------------------|
|  | EdgeIdKey | gml property to use as id for edges |
|  | EdgeLabelKey | gml property to assign edge labels to |
|  | VertexIdKey | gml property to use as id for vertices |

Methods

| | Name | Description |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
|  | InputGraph(Stream) | Read the GML from from the stream. If the file is malformed incomplete data can be loaded. |
|  | InputGraph(String) | Read the GML from from the stream. If the file is malformed incomplete data can be loaded. |
|  | InputGraph(Stream, Int32) | Read the GML from from the stream. If the file is malformed incomplete data can be loaded. |
|  | InputGraph(String, Int32) | Read the GML from from the stream. If the file is malformed incomplete data can be loaded. |
|   | InputGraph(IGraph, Stream) | Load the GML file into the Graph. |
|   | InputGraph(IGraph, String) | Load the GML file into the Graph. |
|   | InputGraph(IGraph, Stream, Int32, String, String, String, String) | |
|   | InputGraph(IGraph, String, Int32, String, String, String, String) | Load the GML file into the Graph. |

Fields

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------|-------------|
|  | DefaultLabel | |

GmlReader Constructor

Overload List

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------------------|------------------------------------------------------------------------|
|  | GmlReader(IGraph) | Create a new GML reader (Uses default edge label DEFAULT_LABEL) |
|  | GmlReader(IGraph, String) | Create a new GML reader |

See Also

[GmlReader Class](#)

[VelocityGraph.Frontenac.Blueprints.Util.IO.GML Namespace](#)

GmlReader Constructor (IGraph)

Create a new GML reader

(Uses default edge label DEFAULT_LABEL)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public GmlReader(  
    IGraph graph  
)
```

VB

```
Public Sub New (  
    graph As IGraph  
)
```

C++

```
public:  
GmlReader(  
    IGraph^ graph  
)
```

F#

```
new :  
    graph : IGraph -> GmlReader
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to load data into

See Also

[GmlReader Class](#)

[GmlReader Overload](#)

[VelocityGraph.Frontenac.Blueprints.Util.IO.GML Namespace](#)

GmlReader Constructor (IGraph, String)

Create a new GML reader

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public GmlReader(  
    IGraph graph,  
    string defaultEdgeLabel  
)
```

VB

```
Public Sub New (  
    graph As IGraph,  
    defaultEdgeLabel As String  
)
```

C++

```
public:  
GmlReader(  
    IGraph^ graph,  
    String^ defaultEdgeLabel  
)
```

F#

```
new :  
    graph : IGraph *  
    defaultEdgeLabel : string -> GmlReader
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to load data into

defaultEdgeLabel

Type: [System.String](#)

the default edge label to be used if the GML edge does not define a label

filename

Type: [System.String](#)

[Missing <param name="filename"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GML.GmlReader.InputGraph(System.String)"]

See Also

[GmlReader Class](#)

[InputGraph Overload](#)

[VelocityGraph.Frontenac.Blueprints.Util.IO.GML Namespace](#)

GmlReader.InputGraph Method (Stream, Int32)

Read the GML from from the stream.

If the file is malformed incomplete data can be loaded.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void InputGraph(  
    Stream inputStream,  
    int bufferSize  
)
```

VB

```
Public Sub InputGraph (  
    inputStream As Stream,  
    bufferSize As Integer  
)
```

C++

```
public:  
void InputGraph(  
    Stream^ inputStream,  
    int bufferSize  
)
```

F#

```
member InputGraph :  
    inputStream : Stream *  
    bufferSize : int -> unit
```

Parameters

inputStream

Type: [System.IO.Stream](#)

[Missing <param name="inputStream"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.GML.GmlReader.InputGraph(System.IO.Stream,System.Int32)"]

bufferSize

Type: [System.Int32](#)

[Missing <param name="bufferSize"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GML.GmlReader.InputGraph(System.IO.Stream,System.Int32)"]

GmlReader.InputGraph Method (IGraph, Stream)

Load the GML file into the Graph.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void InputGraph(  
    IGraph graph,  
    Stream inputStream  
)
```

VB

```
Public Shared Sub InputGraph (  
    graph As IGraph,  
    inputStream As Stream  
)
```

C++

```
public:  
static void InputGraph(  
    IGraph^ graph,  
    Stream^ inputStream  
)
```

F#

```
static member InputGraph :  
    graph : IGraph *  
    inputStream : Stream -> unit
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

to receive the data

inputStream

Type: [System.IO.Stream](#)

GML file

Load the GML file into the Graph.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void InputGraph(  
    IGraph inputGraph,  
    string filename,  
    int bufferSize,  
    string defaultEdgeLabel,  
    string vertexIdKey,  
    string edgeIdKey,  
    string edgeLabelKey  
)
```

VB

```
Public Shared Sub InputGraph (  
    inputGraph As IGraph,  
    filename As String,  
    bufferSize As Integer,  
    defaultEdgeLabel As String,  
    vertexIdKey As String,  
    edgeIdKey As String,  
    edgeLabelKey As String  
)
```

C++

```
public:  
static void InputGraph(  
    IGraph^ inputGraph,  
    String^ filename,  
    int bufferSize,  
    String^ defaultEdgeLabel,  
    String^ vertexIdKey,  
    String^ edgeIdKey,  
    String^ edgeLabelKey  
)
```

F#

```
static member InputGraph :  
    inputGraph : IGraph *  
    filename : string *  
    bufferSize : int *  
    defaultEdgeLabel : string *  
    vertexIdKey : string *
```

```
edgeIdKey : string *  
edgeLabelKey : string -> unit
```

Parameters

inputGraph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

to receive the data

filename

Type: [System.String](#)

GML file

bufferSize

Type: [System.Int32](#)

[Missing <param name="bufferSize"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.GML.GmlReader.InputGraph(VelocityGraph.Frontenac.Blueprints.IGraph,System.String,System.Int32,System.String,System.String,System.String,System.String)"]

defaultEdgeLabel

Type: [System.String](#)

default edge label to be used if not defined in the data

vertexIdKey

Type: [System.String](#)

if the id of a vertex is a <data/> property, fetch it from the data property.

edgeIdKey

Type: [System.String](#)

if the id of an edge is a <data/> property, fetch it from the data property.

edgeLabelKey

Type: [System.String](#)

if the label of an edge is a <data/> property, fetch it from the data property.

GmlWriter Class

GmlWriter writes a Graph to a GML OutputStream.

GML definition taken from (<http://www.fim.uni-passau.de/fileadmin/files/lehrstuhl/brandenburg/projekte/gml/gml-documentation.tar.gz>)

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.IO.GML.GmlWriter

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class GmlWriter
```

VB

```
Public Class GmlWriter
```

C++

```
public ref class GmlWriter
```

F#

```
type GmlWriter = class end
```

The **GmlWriter** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------|----------------------------------------------------------|
|  | GmlWriter | Initializes a new instance of the GmlWriter class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | EdgeIdKey | gml property to use for the blueprints edges id, defaults to GMLTokens.BLUEPRINTS_ID |
|  | Normalize | whether to normalize the output. Normalized output is deterministic with respect to the order of elements and properties in the resulting XML document, and is compatible with line diff-based tools such as Git. Note: normalized output is memory-intensive and is not appropriate for very large graphs. |

| | |
|---------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Strict | when set to true, property keys in the Graph that do not meet the exact guidelines of the GML specification are ignored. By default this value is false. |
|  UseId | whether to use the blueprints id directly or substitute with a generated integer. To use this option the blueprints ids must all be Integers or string representations of integers |
|  VertexIdKey | gml property to use for the blueprints vertex id, defaults to GMLTokens.BLUEPRINTS_ID |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------------------|--------------------------------------------------|
|  | OutputGraph(Stream) | Write the data in a Graph to a GML OutputStream. |
|  | OutputGraph(String) | Write the data in a Graph to a GML OutputStream. |
|  | OutputGraph(IGraph, Stream) | Write the data in a Graph to a GML OutputStream. |
|  | OutputGraph(IGraph, String) | Write the data in a Graph to a GML OutputStream. |

GraphJsonReader Class

GraphJsonReader reads the data from a GraphJson JSON stream to a graph.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.IO.GraphJson.GraphJsonReader

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphJson](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static class GraphJsonReader
```

VB

```
Public NotInheritable Class GraphJsonReader
```

C++

```
public ref class GraphJsonReader abstract sealed
```

F#

```
[<AbstractClassAttribute>]  
[<SealedAttribute>]  
type GraphJsonReader = class end
```

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
|  | InputGraph(IGraph, Stream, Int32) | Input the GraphJson stream data into the graph. In practice, usually the provided graph is empty. |
|  | InputGraph(IGraph, String, Int32) | |
|  | InputGraph(IGraph, Stream, Int32, GraphJsonSettings) | Input the GraphJson stream data into the graph. More control over how data is streamed is provided by this method. |

GraphJsonReader.InputGraph Method (IGraph, Stream, Int32)

Input the GraphJson stream data into the graph. In practice, usually the provided graph is empty.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphJson](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void InputGraph(  
    IGraph graph,  
    Stream jsonInputStream,  
    int bufferSize = 1000  
)
```

VB

```
Public Shared Sub InputGraph (  
    graph As IGraph,  
    jsonInputStream As Stream,  
    Optional bufferSize As Integer = 1000  
)
```

C++

```
public:  
static void InputGraph(  
    IGraph^ graph,  
    Stream^ jsonInputStream,  
    int bufferSize = 1000  
)
```

F#

```
static member InputGraph :  
    graph : IGraph *  
    jsonInputStream : Stream *  
    ?bufferSize : int  
(* Defaults:  
    let _bufferSize = defaultArg bufferSize 1000  
*)  
-> unit
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to populate with the GraphJson data

jsonInputStream

Type: [System.IO.Stream](#)

a Stream of JSON data

VelocityDB Class Library

bufferSize (Optional)

Type: [System.Int32](#)

the amount of elements to hold in memory before committing a transactions (only valid for TransactionalGraphs)

[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphJson Namespace](#)

GraphJsonSettings Constructor

Initializes a new instance of the [GraphJsonSettings](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphJson](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public GraphJsonSettings ()
```

VB

```
Public Sub New
```

C++

```
public:  
GraphJsonSettings ()
```

F#

```
new : unit -> GraphJsonSettings
```

GraphJsonSettings.GraphJsonSettings Properties

The [GraphJsonSettings](#) type exposes the following members.

Properties

| | Name | Description |
|--------------------------------------------------------------------------------------------|---------------------------------|-------------|
|  S | Default | |
|  | EdgeCaptionProp | |
|  | IdProp | |
|  | NodeCaptionProp | |
|  | SourceProp | |
|  | TargetProp | |

GraphJsonWriter.OutputGraph Method (IGraph, Stream)

Write the data in a Graph to a GraphJson OutputStream.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphJson](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void OutputGraph(  
    IGraph graph,  
    Stream jsonOutputStream  
)
```

VB

```
Public Shared Sub OutputGraph (  
    graph As IGraph,  
    jsonOutputStream As Stream  
)
```

C++

```
public:  
static void OutputGraph(  
    IGraph^ graph,  
    Stream^ jsonOutputStream  
)
```

F#

```
static member OutputGraph :  
    graph : IGraph *  
    jsonOutputStream : Stream -> unit
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to serialize

jsonOutputStream

Type: [System.IO.Stream](#)

the OutputStream to write to

GraphJsonWriter.OutputGraph Method (IGraph, Stream, GraphJsonSettings)

Write the data in a Graph to a GraphJson OutputStream.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphJson](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void OutputGraph (
    IGraph graph,
    Stream jsonOutputStream,
    GraphJsonSettings settings
)
```

VB

```
Public Shared Sub OutputGraph (
    graph As IGraph,
    jsonOutputStream As Stream,
    settings As GraphJsonSettings
)
```

C++

```
public:
static void OutputGraph (
    IGraph^ graph,
    Stream^ jsonOutputStream,
    GraphJsonSettings^ settings
)
```

F#

```
static member OutputGraph :
    graph : IGraph *
    jsonOutputStream : Stream *
    settings : GraphJsonSettings -> unit
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to serialize

jsonOutputStream

Type: [System.IO.Stream](#)

the OutputStream to write to

settings

Type: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphJson.GraphJsonSettings](#)

Contains field names that the writer will use to map to BluePrints

VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML Namespace

[Missing <summary> documentation for "N:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML"]

Classes

| | Class | Description |
|-----------------------------------------------------------------------------------|-------------------------------|--------------------------------------------------------------------------|
|  | GraphMigrator | GraphMigrator takes the data in one graph and pipes it to another graph. |
|  | GraphMLReader | GraphMLReader writes the data from a GraphML stream to a graph. |
|  | GraphMLTokens | A collection of tokens used for GraphML related data. |
|  | GraphMLWriter | GraphMLWriter writes a Graph to a GraphML OutputStream. |

GraphMigrator Class

GraphMigrator takes the data in one graph and pipes it to another graph.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML.GraphMigrator

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static class GraphMigrator
```

VB

```
Public NotInheritable Class GraphMigrator
```

C++

```
public ref class GraphMigrator abstract sealed
```

F#

```
[<AbstractClassAttribute>]  
[<SealedAttribute>]  
type GraphMigrator = class end
```

The **GraphMigrator** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------|------------------------------------------------|
|  | MigrateGraph | Pipe the data from one graph to another graph. |

See Also

[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML Namespace](#)

GraphMigrator.GraphMigrator Methods

The [GraphMigrator](#) type exposes the following members.

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------------|------------------------------------------------|
|  | MigrateGraph | Pipe the data from one graph to another graph. |

GraphMigrator.MigrateGraph Method

Pipe the data from one graph to another graph.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void MigrateGraph(  
    IGraph fromGraph,  
    IGraph toGraph  
)
```

VB

```
Public Shared Sub MigrateGraph (  
    fromGraph As IGraph,  
    toGraph As IGraph  
)
```

C++

```
public:  
static void MigrateGraph(  
    IGraph^ fromGraph,  
    IGraph^ toGraph  
)
```

F#

```
static member MigrateGraph :  
    fromGraph : IGraph *  
    toGraph : IGraph -> unit
```

Parameters

fromGraph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to take data from

toGraph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to take data to

See Also

[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML Namespace](#)

GraphMLReader Class

GraphMLReader writes the data from a GraphML stream to a graph.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML.GraphMLReader

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class GraphMLReader
```

VB

```
Public Class GraphMLReader
```

C++

```
public ref class GraphMLReader
```

F#

```
type GraphMLReader = class end
```

The **GraphMLReader** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------|--------------------------------------------------------------|
|  | GraphMLReader | Initializes a new instance of the GraphMLReader class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------|---------------------------------------------------------------------------------|
|  | EdgeIdKey | if the id of an edge is a <data/> property, fetch it from the data property. |
|  | EdgeLabelKey | if the label of an edge is a <data/> property, fetch it from the data property. |
|  | VertexIdKey | if the id of a vertex is a <data/> property, fetch it from the data property. |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|-------------------------------------------------------------------------------------------------|
|  | InputGraph(Stream) | Input the GraphML stream data into the graph. In practice, usually the provided graph is empty. |

| | | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|
|  | InputGraph(String) | Input the GraphML stream data into the graph. In practice, usually the provided graph is empty. |
|  | InputGraph(Stream, Int32) | Input the GraphML stream data into the graph. In practice, usually the provided graph is empty. |
|  | InputGraph(String, Int32) | Input the GraphML stream data into the graph. In practice, usually the provided graph is empty. |
|   | InputGraph(IGraph, Stream) | Input the GraphML stream data into the graph. In practice, usually the provided graph is empty. |
|   | InputGraph(IGraph, String) | Input the GraphML stream data into the graph. In practice, usually the provided graph is empty. |
|   | InputGraph(IGraph, Stream, Int32, String, String, String) | Input the GraphML stream data into the graph. More control over how data is streamed is provided by this method. |
|   | InputGraph(IGraph, String, Int32, String, String, String) | Input the GraphML stream data into the graph. More control over how data is streamed is provided by this method. |

[GraphMLReader Class](#)[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML Namespace](#)

GraphMLReader.InputGraph Method (Stream)

Input the GraphML stream data into the graph. In practice, usually the provided graph is empty.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

```
C#  
public void InputGraph(  
    Stream graphMLInputStream  
)
```

```
VB  
Public Sub InputGraph (  
    graphMLInputStream As Stream  
)
```

```
C++  
public:  
void InputGraph(  
    Stream^ graphMLInputStream  
)
```

```
F#  
member InputGraph :  
    graphMLInputStream : Stream -> unit
```

Parameters

graphMLInputStream

Type: [System.IO.Stream](#)

a Stream of GraphML data

See Also

[GraphMLReader Class](#)

[InputGraph Overload](#)

[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML Namespace](#)

GraphMLReader.InputGraph Method (String)

Input the GraphML stream data into the graph. In practice, usually the provided graph is empty.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void InputGraph(  
    string filename  
)
```

VB

```
Public Sub InputGraph (  
    filename As String  
)
```

C++

```
public:  
void InputGraph(  
    String^ filename  
)
```

F#

```
member InputGraph :  
    filename : string -> unit
```

Parameters

filename

Type: [System.String](#)

name of a file containing GraphML data

See Also

[GraphMLReader Class](#)

[InputGraph Overload](#)

[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML Namespace](#)

GraphMLReader.InputGraph Method (Stream, Int32)

Input the GraphML stream data into the graph. In practice, usually the provided graph is empty.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void InputGraph(  
    Stream graphMLInputStream,  
    int bufferSize  
)
```

VB

```
Public Sub InputGraph (  
    graphMLInputStream As Stream,  
    bufferSize As Integer  
)
```

C++

```
public:  
void InputGraph(  
    Stream^ graphMLInputStream,  
    int bufferSize  
)
```

F#

```
member InputGraph :  
    graphMLInputStream : Stream *  
    bufferSize : int -> unit
```

Parameters

graphMLInputStream

Type: [System.IO.Stream](#)

a Stream of GraphML data

bufferSize

Type: [System.Int32](#)

the amount of elements to hold in memory before committing a transactions (only valid for TransactionalGraphs)

See Also

[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML Namespace](#)

GraphMLReader.InputGraph Method (IGraph, Stream)

Input the GraphML stream data into the graph. In practice, usually the provided graph is empty.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void InputGraph(  
    IGraph inputGraph,  
    Stream graphMLInputStream  
)
```

VB

```
Public Shared Sub InputGraph (  
    inputGraph As IGraph,  
    graphMLInputStream As Stream  
)
```

C++

```
public:  
static void InputGraph(  
    IGraph^ inputGraph,  
    Stream^ graphMLInputStream  
)
```

F#

```
static member InputGraph :  
    inputGraph : IGraph *  
    graphMLInputStream : Stream -> unit
```

Parameters

inputGraph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to populate with the GraphML data

graphMLInputStream

Type: [System.IO.Stream](#)

a Stream of GraphML data

See Also

Parameters

inputGraph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to populate with the GraphML data

filename

Type: [System.String](#)

name of a file containing GraphML data

See Also

[GraphMLReader Class](#)

[InputGraph Overload](#)

[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML Namespace](#)

GraphMLReader.InputGraph Method (IGraph, Stream, Int32, String, String, String)

Input the GraphML stream data into the graph. More control over how data is streamed is provided by this method.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void InputGraph(  
    IGraph inputGraph,  
    Stream graphMLInputStream,  
    int bufferSize,  
    string vertexIdKey,  
    string edgeIdKey,  
    string edgeLabelKey  
)
```

VB

```
Public Shared Sub InputGraph (  
    inputGraph As IGraph,  
    graphMLInputStream As Stream,  
    bufferSize As Integer,  
    vertexIdKey As String,  
    edgeIdKey As String,  
    edgeLabelKey As String  
)
```

C++

```
public:  
static void InputGraph(  
    IGraph^ inputGraph,  
    Stream^ graphMLInputStream,  
    int bufferSize,  
    String^ vertexIdKey,  
    String^ edgeIdKey,  
    String^ edgeLabelKey  
)
```

F#

```
static member InputGraph :  
    inputGraph : IGraph *  
    graphMLInputStream : Stream *  
    bufferSize : int *  
    vertexIdKey : string *  
    edgeIdKey : string *  
    edgeLabelKey : string -> unit
```

Parameters

inputGraph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to populate with the GraphML data

graphMLInputStream

Type: [System.IO.Stream](#)

a Stream of GraphML data

bufferSize

Type: [System.Int32](#)

the amount of elements to hold in memory before committing a transactions (only valid for TransactionalGraphs)

vertexIdKey

Type: [System.String](#)

if the id of a vertex is a <data/> property, fetch it from the data property.

edgeIdKey

Type: [System.String](#)

if the id of an edge is a <data/> property, fetch it from the data property.

edgeLabelKey

Type: [System.String](#)

if the label of an edge is a <data/> property, fetch it from the data property.

GraphMLWriter Class

GraphMLWriter writes a Graph to a GraphML OutputStream.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML.GraphMLWriter

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class GraphMLWriter
```

VB

```
Public Class GraphMLWriter
```

C++

```
public ref class GraphMLWriter
```

F#

```
type GraphMLWriter = class end
```

The **GraphMLWriter** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------|--------------------------------------------------------------|
|  | GraphMLWriter | Initializes a new instance of the GraphMLWriter class |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|------------------------------------------------------|
|  | OutputGraph(Stream) | Write the data in a Graph to a GraphML OutputStream. |
|  | OutputGraph(String) | Write the data in a Graph to a GraphML file. |
|  | OutputGraph(IGraph, Stream) | Write the data in a Graph to a GraphML OutputStream. |
|  | | |
|  | OutputGraph(IGraph, String) | Write the data in a Graph to a GraphML file. |
|  | | |
|  | OutputGraph(IGraph, Stream, Dictionary(String, String), Dictionary(String, String)) | Write the data in a Graph to a GraphML OutputStream. |
|  | | |

| | | |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|   | OutputGraph(IGraph, String, Dictionary(String, String), Dictionary(String, String)) | <p>Write the data in a Graph to a GraphML file.</p> |
|  | SetEdgeKeyTypes | <p>a IDictionary<string, string> of the data types of the edge keys</p> |
|  | SetEdgeLabelKey | <p>Set the name of the edge label in the GraphML. When this value is not set the value of the Edge.getLabel() is written as a "label" attribute on the edge element. This does not validate against the GraphML schema. If this value is set then the the value of Edge.getLabel() is written as a data element on the edge and the appropriate key element is added to define it in the GraphML</p> |
|  | SetNormalize | <p>whether to normalize the output. Normalized output is deterministic with respect to the order of elements and properties in the resulting XML document, and is compatible with line diff-based tools such as Git. Note: normalized output is memory-intensive and is not appropriate for very large graphs.</p> |
|  | SetVertexKeyTypes | <p>a IDictionary<string, string> of the data types of the vertex keys</p> |
|  | SetXmlSchemaLocation | <p>the location of the GraphML XML Schema instance</p> |

GraphMLWriter.GraphMLWriter Methods

The [GraphMLWriter](#) type exposes the following members.

Methods

| Name | Description |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  OutputGraph(Stream) | Write the data in a Graph to a GraphML OutputStream. |
|  OutputGraph(String) | Write the data in a Graph to a GraphML file. |
|  OutputGraph(IGraph, Stream) | Write the data in a Graph to a GraphML OutputStream. |
|  OutputGraph(IGraph, String) | Write the data in a Graph to a GraphML file. |
|  OutputGraph(IGraph, Stream, Dictionary(String, String), Dictionary(String, String)) | Write the data in a Graph to a GraphML OutputStream. |
|  OutputGraph(IGraph, String, Dictionary(String, String), Dictionary(String, String)) | Write the data in a Graph to a GraphML file. |
|  SetEdgeKeyTypes | a IDictionary<string, string> of the data types of the edge keys |
|  SetEdgeLabelKey | Set the name of the edge label in the GraphML. When this value is not set the value of the Edge.getLabel() is written as a "label" attribute on the edge element. This does not validate against the GraphML schema. If this value is set then the the value of Edge.getLabel() is written as a data element on the edge and the appropriate key element is added to define it in the GraphML |
|  SetNormalize | whether to normalize the output. Normalized output is deterministic with respect to the order of elements and properties in the resulting XML document, and is compatible with line diff-based tools such as Git. Note: normalized output is memory-intensive and is not appropriate for very large graphs. |
|  SetVertexKeyTypes | a IDictionary<string, string> of the data types of the vertex keys |
|  SetXmlSchemaLocation | the location of the GraphML XML Schema instance |

GraphMLWriter.SetEdgeLabelKey Method

Set the name of the edge label in the GraphML. When this value is not set the value of the `Edge.getLabel()` is written as a "label" attribute on the edge element. This does not validate against the GraphML schema. If this value is set then the the value of `Edge.getLabel()` is written as a data element on the edge and the appropriate key element is added to define it in the GraphML

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void SetEdgeLabelKey(  
    string edgeLabelKey  
)
```

VB

```
Public Sub SetEdgeLabelKey (  
    edgeLabelKey As String  
)
```

C++

```
public:  
void SetEdgeLabelKey(  
    String^ edgeLabelKey  
)
```

F#

```
member SetEdgeLabelKey :  
    edgeLabelKey : string -> unit
```

Parameters

edgeLabelKey

Type: [System.String](#)

if the label of an edge will be handled by the data property.

GraphMLWriter.SetNormalize Method

whether to normalize the output. Normalized output is deterministic with respect to the order of elements and properties in the resulting XML document, and is compatible with line diff-based tools such as Git. Note: normalized output is memory-intensive and is not appropriate for very large graphs.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void SetNormalize (  
    bool normalize  
)
```

VB

```
Public Sub SetNormalize (  
    normalize As Boolean  
)
```

C++

```
public:  
void SetNormalize (  
    bool normalize  
)
```

F#

```
member SetNormalize :  
    normalize : bool -> unit
```

Parameters

normalize

Type: [System.Boolean](#)

[Missing <param name="normalize"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphML.GraphMLWriter.SetNormalize(System.Boolean)"]

VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON Namespace

[Missing <summary> documentation for "N:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON"]

Classes

| Class | Description |
|--------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
|  ElementFactoryContract | |
|  ElementPropertyConfig | Configure how the GraphSON utility treats edge and vertex properties. |
|  GraphElementFactory | The standard factory used for most graph element creation. It uses an actual Graph implementation to construct vertices and edges |
|  GraphSonReader | GraphSONReader reads the data from a TinkerPop JSON stream to a graph. |
|  GraphSonTokens | |
|  GraphSonUtility | Helps write individual graph elements to TinkerPop JSON format known as GraphSON. |
|  GraphSonWriter | GraphSONWriter writes a Graph to a TinkerPop JSON OutputStream. |

Interfaces

| Interface | Description |
|---------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  IElementFactory | A factory responsible for creating graph elements. Abstracts the way that graph elements are created. In most cases a Graph is responsible for element creation, but there are cases where more control over how vertices and edges are constructed. |

Enumerations

| Enumeration | Description |
|-------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
|  ElementPropertyConfig.ElementPropertiesRule | |
|  GraphSonMode | Modes of operation of the GraphSONUtility. |

ElementFactoryContract Class

GraphElementFactory.CreateEdge Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphElementFactory.CreateEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEdge CreateEdge(  
    Object id,  
    IVertex out_,  
    IVertex in_,  
    string label  
)
```

VB

```
Public Function CreateEdge (  
    id As Object,  
    out_ As IVertex,  
    in_ As IVertex,  
    label As String  
) As IEdge
```

C++

```
public:  
virtual IEdge^ CreateEdge(  
    Object^ id,  
    IVertex^ out_,  
    IVertex^ in_,  
    String^ label  
) sealed
```

F#

```
abstract CreateEdge :  
    id : Object *  
    out_ : IVertex *  
    in_ : IVertex *  
    label : string -> IEdge  
override CreateEdge :  
    id : Object *  
    out_ : IVertex *  
    in_ : IVertex *  
    label : string -> IEdge
```

Parameters

id

Type: [System.Object](#)

[Missing <param name="id"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphElementFactory.CreateEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

out_

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="out_"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphElementFactory.CreateEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

in_

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="in_"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphElementFactory.CreateEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

label

Type: [System.String](#)

[Missing <param name="label"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphElementFactory.CreateEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Return Value

Type: [IEdge](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphElementFactory.CreateEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Implements

[IElementFactory.CreateEdge\(Object, IVertex, IVertex, String\)](#)

GraphSonMode Enumeration

Modes of operation of the GraphSONUtility.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public enum GraphSonMode
```

VB

```
Public Enumeration GraphSonMode
```

C++

```
public enum class GraphSonMode
```

F#

```
type GraphSonMode
```

Members

| Member name | Value | Description |
|-----------------|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMPACT | 0 | COMPACT constructs GraphSON on the assumption that all property keys are fair game for exclusion including <code>_type</code> , <code>_inV</code> , <code>_outV</code> , <code>_label</code> and <code>_id</code> . It is possible to write GraphSON that cannot be read back into Graph, if some or all of these keys are excluded. |
| NORMAL | 1 | NORMAL includes the <code>_type</code> field and JSON data typing. |
| EXTENDED | 2 | EXTENDED includes the <code>_type</code> field and explicit data typing. |

GraphSonReader Class

GraphSONReader reads the data from a TinkerPop JSON stream to a graph.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonReader

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class GraphSonReader
```

VB

```
Public Class GraphSonReader
```

C++

```
public ref class GraphSonReader
```

F#

```
type GraphSonReader = class end
```

The **GraphSonReader** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------|---------------------------------------------------------------|
|  | GraphSonReader | Initializes a new instance of the GraphSonReader class |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------------|----------------------------------------------------------------------------------------------|
|  | InputGraph(Stream) | Input the JSON stream data into the graph. In practice, usually the provided graph is empty. |
|  | InputGraph(String) | Input the JSON stream data into the graph. In practice, usually the provided graph is empty. |
|  | InputGraph(Stream, Int32) | Input the JSON stream data into the graph. In practice, usually the provided graph is empty. |
|  | InputGraph(String, Int32) | Input the JSON stream data into the graph. In practice, usually the provided graph is empty. |

| | | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
|   | InputGraph(IGraph, Stream) | Input the JSON stream data into the graph. In practice, usually the provided graph is empty. |
|   | InputGraph(IGraph, String) | Input the JSON stream data into the graph. In practice, usually the provided graph is empty. |
|   | InputGraph(IGraph, Stream, Int32) | |
|   | InputGraph(IGraph, String, Int32) | |
|   | InputGraph(IGraph, Stream, Int32, IEnumerable(String), IEnumerable(String)) | Input the JSON stream data into the graph. More control over how data is streamed is provided by this method. |
|   | InputGraph(IGraph, String, Int32, IEnumerable(String), IEnumerable(String)) | Input the JSON stream data into the graph. More control over how data is streamed is provided by this method. |

Initializes a new instance of the [GraphSonReader](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public GraphSonReader (  
    IGraph graph  
)
```

VB

```
Public Sub New (  
    graph As IGraph  
)
```

C++

```
public:  
GraphSonReader (  
    IGraph^ graph  
)
```

F#

```
new :  
    graph : IGraph -> GraphSonReader
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to populate with the JSON data

GraphSonReader.InputGraph Method (Stream)

Input the JSON stream data into the graph. In practice, usually the provided graph is empty.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void InputGraph(  
    Stream jsonInputStream  
)
```

VB

```
Public Sub InputGraph (  
    jsonInputStream As Stream  
)
```

C++

```
public:  
void InputGraph(  
    Stream^ jsonInputStream  
)
```

F#

```
member InputGraph :  
    jsonInputStream : Stream -> unit
```

Parameters

jsonInputStream

Type: [System.IO.Stream](#)

a Stream of JSON data

    IGraph^ inputGraph,  
    String^ filename,  
    int bufferSize,  
    IEnumerable<String^>^ edgePropertyKeys,  
    IEnumerable<String^>^ vertexPropertyKeys  
)
```

F#

```
static member InputGraph :  
    inputGraph : IGraph *  
    filename : string *  
    bufferSize : int *  
    edgePropertyKeys : IEnumerable<string> *  
    vertexPropertyKeys : IEnumerable<string> -> unit
```

Parameters

inputGraph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to populate with the JSON data

filename

Type: [System.String](#)

name of a file of JSON data

bufferSize

Type: [System.Int32](#)

the amount of elements to hold in memory before committing a transactions (only valid for TransactionalGraphs)

edgePropertyKeys

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

[Missing <param name="edgePropertyKeys"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonReader.InputGraph(VelocityGraph.Frontenac.Blueprints.IGraph,System.String,System.Int32,System.Collections.Generic.IEnumerable{System.String},System.Collections.Generic.IEnumerable{System.String})"]

vertexPropertyKeys

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

[Missing <param name="vertexPropertyKeys"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonReader.InputGraph(VelocityGraph.Frontenac.Blueprints.IGraph,System.String,System.Int32,System.Collections.Generic.IEnumerable{System.String},System.Collections.Generic.IEnumerable{System.String})"]

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonTokens

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static class GraphSonTokens
```

VB

```
Public NotInheritable Class GraphSonTokens
```

C++

```
public ref class GraphSonTokens abstract sealed
```

F#

```
[<AbstractClassAttribute>]  
[<SealedAttribute>]  
type GraphSonTokens = class end
```

The **GraphSonTokens** type exposes the following members.

Fields

| | Name | Description |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|-------------|
|   | Edge | |
|   | Edges | |
|   | Id | |
|   | InV | |
|   | Label | |
|   | Mode | |
|   | OutV | |
|   | Type | |
|   | TypeBoolean | |
|   | TypeDouble | |

VelocityDB Class Library

| | | |

GraphSonUtility Class

Helps write individual graph elements to TinkerPop JSON format known as GraphSON.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonUtility

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class GraphSonUtility
```

VB

```
Public Class GraphSonUtility
```

C++

```
public ref class GraphSonUtility
```

F#

```
type GraphSonUtility = class end
```

The **GraphSonUtility** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
|  | GraphSonUtility(GraphSonMode, IElementFactory) | A GraphSONUtility that includes all properties of vertices and edges. |
|  | GraphSonUtility(GraphSonMode, IElementFactory, ElementPropertyConfig) | Initializes a new instance of the GraphSonUtility class |
|  | GraphSonUtility(GraphSonMode, IElementFactory, IEnumerable(String), IEnumerable(String)) | A GraphSONUtility that includes the specified properties. |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------------------------|---------------------------------------------------------------------------|
|  | EdgeFromJson(JObject, IVertex, IVertex) | Creates an edge from GraphSON using settings supplied in the constructor. |
|  | EdgeFromJson(Stream, IVertex, IVertex) | |

| | |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
|  EdgeFromJson(String, IVertex, IVertex) | Creates an edge from GraphSON using settings supplied in the constructor. |
|  EdgeFromJson(JObject, IVertex, IVertex, IElementFactory, GraphSonMode, IEnumerable(String)) | Reads an individual Edge from JSON. The edge must match the accepted GraphSON format. |
|  EdgeFromJson(Stream, IVertex, IVertex, IElementFactory, GraphSonMode, IEnumerable(String)) | Reads an individual Edge from JSON. The edge must match the accepted GraphSON format. |
|  EdgeFromJson(String, IVertex, IVertex, IElementFactory, GraphSonMode, IEnumerable(String)) | Reads an individual Edge from JSON. The edge must match the accepted GraphSON format. |
|  GetTypedValueFromJsonNode | |
|  JsonFromElement(IElement) | Creates GraphSON for a single graph element. |
|  JsonFromElement(IElement, IEnumerable(String), GraphSonMode) | Creates a JSON.NET ObjectNode from a graph element. |
|  VertexFromJson(JObject) | Creates a vertex from GraphSON using settings supplied in the constructor. |
|  VertexFromJson(Stream) | Creates a vertex from GraphSON using settings supplied in the constructor. |
|  VertexFromJson(String) | Creates a vertex from GraphSON using settings supplied in the constructor. |
|  VertexFromJson(JObject, IElementFactory, GraphSonMode, IEnumerable(String)) | Reads an individual Vertex from JSON. The vertex must match the accepted GraphSON format. |
|  VertexFromJson(Stream, IElementFactory, GraphSonMode, IEnumerable(String)) | Reads an individual Vertex from JSON. The vertex must match the accepted GraphSON format. |
|  VertexFromJson(String, IElementFactory, GraphSonMode, IEnumerable(String)) | Reads an individual Vertex from JSON. The vertex must match the accepted GraphSON format. |

GraphSonUtility Constructor (GraphSonMode, IElementFactory)

A GraphSONUtility that includes all properties of vertices and edges.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public GraphSonUtility(  
    GraphSonMode mode,  
    IElementFactory factory  
)
```

VB

```
Public Sub New (  
    mode As GraphSonMode,  
    factory As IElementFactory  
)
```

C++

```
public:  
GraphSonUtility(  
    GraphSonMode mode,  
    IElementFactory^ factory  
)
```

F#

```
new :  
    mode : GraphSonMode *  
    factory : IElementFactory -> GraphSonUtility
```

Parameters

mode

Type: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonMode](#)

[Missing <param name="mode"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonUtility.#ctor(VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonMode,VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.IElementFactory)"]

factory

Type: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.IElementFactory](#)

[Missing <param name="factory"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonUtility.#ctor(VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonMode,VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.IElementFactory)"]

[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON Namespace](#)

GraphSonUtility Constructor (GraphSonMode, IElementFactory, IEnumerable(String), IEnumerable(String))

A GraphSONUtility that includes the specified properties.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public GraphSonUtility(  
    GraphSonMode mode,  
    IElementFactory factory,  
    IEnumerable<string> vertexPropertyKeys,  
    IEnumerable<string> edgePropertyKeys  
)
```

VB

```
Public Sub New (  
    mode As GraphSonMode,  
    factory As IElementFactory,  
    vertexPropertyKeys As IEnumerable(Of String),  
    edgePropertyKeys As IEnumerable(Of String)  
)
```

C++

```
public:  
GraphSonUtility(  
    GraphSonMode mode,  
    IElementFactory^ factory,  
    IEnumerable<String^>^ vertexPropertyKeys,  
    IEnumerable<String^>^ edgePropertyKeys  
)
```

F#

```
new :  
    mode : GraphSonMode *  
    factory : IElementFactory *  
    vertexPropertyKeys : IEnumerable<string> *  
    edgePropertyKeys : IEnumerable<string> -> GraphSonUtility
```

Parameters

mode

Type: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonMode](#)

[Missing <param name="mode"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonUtility.#ctor(VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonMode,VelocityGraph.Frontenac.Blueprints.Util.IO.GraphS

ON.IElementFactory, System.Collections.Generic.IEnumerable{System.String}, System.Collections.Generic.IEnumerable{System.String}]

factory

Type: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.IElementFactory](#)

[Missing <param name="factory"/> documentation for

GraphSonUtility.GraphSonUtility Methods

The [GraphSonUtility](#) type exposes the following members.

Methods

| | Name | Description |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
|  | EdgeFromJson(JObject, IVertex, IVertex) | Creates an edge from GraphSON using settings supplied in the constructor. |
|  | EdgeFromJson(Stream, IVertex, IVertex) | |
|  | EdgeFromJson(String, IVertex, IVertex) | Creates an edge from GraphSON using settings supplied in the constructor. |
|   | EdgeFromJson(JObject, IVertex, IVertex, IElementFactory, GraphSonMode, IEnumerable(String)) | Reads an individual Edge from JSON. The edge must match the accepted GraphSON format. |
|   | EdgeFromJson(Stream, IVertex, IVertex, IElementFactory, GraphSonMode, IEnumerable(String)) | Reads an individual Edge from JSON. The edge must match the accepted GraphSON format. |
|   | EdgeFromJson(String, IVertex, IVertex, IElementFactory, GraphSonMode, IEnumerable(String)) | Reads an individual Edge from JSON. The edge must match the accepted GraphSON format. |
|   | GetTypedValueFromJsonNode | |
|  | JsonFromElement(IElement) | Creates GraphSON for a single graph element. |
|   | JsonFromElement(IElement, IEnumerable(String), GraphSonMode) | Creates a JSON.NET ObjectNode from a graph element. |
|  | VertexFromJson(JObject) | Creates a vertex from GraphSON using settings supplied in the constructor. |
|  | VertexFromJson(Stream) | Creates a vertex from GraphSON using settings supplied in the constructor. |
|  | VertexFromJson(String) | Creates a vertex from GraphSON using settings supplied in the constructor. |
|   | VertexFromJson(JObject, IElementFactory, GraphSonMode, IEnumerable(String)) | Reads an individual Vertex from JSON. The vertex must match the accepted GraphSON format. |
|   | VertexFromJson(Stream, IElementFactory, GraphSonMode, IEnumerable(String)) | Reads an individual Vertex from JSON. The vertex must match the accepted GraphSON format. |
|   | VertexFromJson(String, IElementFactory, GraphSonMode, IEnumerable(String)) | Reads an individual Vertex from JSON. The vertex must match the accepted GraphSON format. |

GraphSonUtility.EdgeFromJson Method (JObject, IVertex, IVertex)

Creates an edge from GraphSON using settings supplied in the constructor.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEdge EdgeFromJson(  
    JObject json,  
    IVertex out_,  
    IVertex in_  
)
```

VB

```
Public Function EdgeFromJson (  
    json As JObject,  
    out_ As IVertex,  
    in_ As IVertex  
) As IEdge
```

C++

```
public:  
IEdge^ EdgeFromJson(  
    JObject^ json,  
    IVertex^ out_,  
    IVertex^ in_  
)
```

F#

```
member EdgeFromJson :  
    json : JObject *  
    out_ : IVertex *  
    in_ : IVertex -> IEdge
```

Parameters

json

Type: **JObject**

[Missing <param name="json"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonUtility.EdgeFromJson(Newtonsoft.Json.Linq.JObject,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex)"]

out_

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="out_" /> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonUtility.EdgeFromJson(Newtonsoft.Json.Linq.JObject,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex)"]

in_

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="in_" /> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonUtility.EdgeFromJson(Newtonsoft.Json.Linq.JObject,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex)"]

Return Value

Type: [IEdge](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonUtility.EdgeFromJson(Newtonsoft.Json.Linq.JObject,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex)"]

GraphSonUtility.JsonFromElement Method (IElement)

Creates GraphSON for a single graph element.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public JObject JsonFromElement (
    IElement element
)
```

VB

```
Public Function JsonFromElement (
    element As IElement
) As JObject
```

C++

```
public:
JObject^ JsonFromElement (
    IElement^ element
)
```

F#

```
member JsonFromElement :
    element : IElement -> JObject
```

Parameters

element

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

[Missing <param name="element"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonUtility.JsonFromElement(VelocityGraph.Frontenac.Blueprints.IElement)"]

Return Value

[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON Namespace](#)

GraphSonUtility.JsonFromElement Method (IElement, IEnumerable(String), GraphSonMode)

Creates a JSON.NET JObject from a graph element.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static JObject JsonFromElement (
    IElement element,
    IEnumerable<string> propertyKeys,
    GraphSonMode mode
)
```

VB

```
Public Shared Function JsonFromElement (
    element As IElement,
    propertyKeys As IEnumerable(Of String),
    mode As GraphSonMode
) As JObject
```

C++

```
public:
static JObject^ JsonFromElement (
    IElement^ element,
    IEnumerable<String^>^ propertyKeys,
    GraphSonMode mode
)
```

F#

```
static member JsonFromElement :
    element : IElement *
    propertyKeys : IEnumerable<string> *
    mode : GraphSonMode -> JObject
```

Parameters

element

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

the graph element to convert to JSON.

propertyKeys

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

The property keys at the root of the element to serialize. If null, then all keys are serialized.

mode

Type: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonMode](#)

The type of GraphSON to generate.

Return Value

Type: **JsonObject**

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonUtility.JsonFromElement(VelocityGraph.Frontenac.Blueprints.IElement,System.Collections.Generic.IEnumerable{System.String},VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonMode)"]

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonWriter

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class GraphSonWriter
```

VB

```
Public Class GraphSonWriter
```

C++

```
public ref class GraphSonWriter
```

F#

```
type GraphSonWriter = class end
```

The **GraphSonWriter** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------|---------------------------------------------------------------|
|  | GraphSonWriter | Initializes a new instance of the GraphSonWriter class |

Methods

| | Name | Description |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
|   | OutputGraph(IGraph, Stream) | Write the data in a Graph to a JSON OutputStream. All keys are written to JSON. Utilizing GraphSONMode.NORMAL. |
|   | OutputGraph(IGraph, String) | Write the data in a Graph to a JSON OutputStream. All keys are written to JSON. Utilizing GraphSONMode.NORMAL. |
|   | OutputGraph(IGraph, Stream, GraphSonMode) | Write the data in a Graph to a JSON OutputStream. All keys are written to JSON. |
|   | OutputGraph(IGraph, String, GraphSonMode) | Write the data in a Graph to a JSON OutputStream. All keys are written to JSON. |

VelocityDB Class Library

| | |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|
|  OutputGraph(Stream, IEnumerable(String), IEnumerable(String), GraphSonMode) | Write the data in a Graph to a JSON OutputStream. |
|  OutputGraph(String, IEnumerable(String), IEnumerable(String), GraphSonMode) | Write the data in a Graph to a JSON OutputStream. |
|   OutputGraph(IGraph, Stream, IEnumerable(String), IEnumerable(String), GraphSonMode) | Write the data in a Graph to a JSON OutputStream. |
|   OutputGraph(IGraph, String, IEnumerable(String), IEnumerable(String), GraphSonMode) | Write the data in a Graph to a JSON OutputStream. |

public void OutputGraph (
    Stream jsonOutputStream,
    IEnumerable<string> vertexPropertyKeys,
    IEnumerable<string> edgePropertyKeys,
    GraphSonMode mode
)
```

VB

```
Public Sub OutputGraph (
    jsonOutputStream As Stream,
    vertexPropertyKeys As IEnumerable(Of String),
    edgePropertyKeys As IEnumerable(Of String),
    mode As GraphSonMode
)
```

C++

```
public:
void OutputGraph (
    Stream^ jsonOutputStream,
    IEnumerable<String^>^ vertexPropertyKeys,
    IEnumerable<String^>^ edgePropertyKeys,
    GraphSonMode mode
)
```

F#

```
member OutputGraph :
    jsonOutputStream : Stream *
    vertexPropertyKeys : IEnumerable<string> *
    edgePropertyKeys : IEnumerable<string> *
    mode : GraphSonMode -> unit
```

Parameters

jsonOutputStream

Type: [System.IO.Stream](#)

the JSON OutputStream to write the Graph data to

vertexPropertyKeys

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

VelocityDB Class Library

the keys of the vertex elements to write to JSON

edgePropertyKeys

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

the keys of the edge elements to write to JSON

mode

Type: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonMode](#)

determines the format of the GraphSON

See Also

[GraphSonWriter Class](#)

[OutputGraph Overload](#)

[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON Namespace](#)

GraphSonWriter.OutputGraph Method (String, IEnumerable(String), IEnumerable(String), GraphSonMode)

Write the data in a Graph to a JSON OutputStream.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void OutputGraph(  
    string filename,  
    IEnumerable<string> vertexPropertyKeys,  
    IEnumerable<string> edgePropertyKeys,  
    GraphSonMode mode  
)
```

VB

```
Public Sub OutputGraph (  
    filename As String,  
    vertexPropertyKeys As IEnumerable(Of String),  
    edgePropertyKeys As IEnumerable(Of String),  
    mode As GraphSonMode  
)
```

C++

```
public:  
void OutputGraph(  
    String^ filename,  
    IEnumerable<String^>^ vertexPropertyKeys,  
    IEnumerable<String^>^ edgePropertyKeys,  
    GraphSonMode mode  
)
```

F#

```
member OutputGraph :  
    filename : string *  
    vertexPropertyKeys : IEnumerable<string> *  
    edgePropertyKeys : IEnumerable<string> *  
    mode : GraphSonMode -> unit
```

Parameters

filename

Type: [System.String](#)

the JSON file to write the Graph data to

vertexPropertyKeys

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

VelocityDB Class Library

the keys of the vertex elements to write to JSON

edgePropertyKeys

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

the keys of the edge elements to write to JSON

mode

Type: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.GraphSonMode](#)

determines the format of the GraphSON

See Also

GraphSonWriter.OutputGraph Method (IGraph, Stream, IEnumerable(String), IEnumerable(String), GraphSonMode)

Write the data in a Graph to a JSON OutputStream.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public static void OutputGraph (
    IGraph graph,
    Stream jsonOutputStream,
    IEnumerable<string> vertexPropertyKeys,
    IEnumerable<string> edgePropertyKeys,
    GraphSonMode mode
)
```

VB

```
Public Shared Sub OutputGraph (
    graph As IGraph,
    jsonOutputStream As Stream,
    vertexPropertyKeys As IEnumerable(Of String),
    edgePropertyKeys As IEnumerable(Of String),
    mode As GraphSonMode
)
```

C++

```
public:
static void OutputGraph(
    IGraph^ graph,
    Stream^ jsonOutputStream,
    IEnumerable<String^>^ vertexPropertyKeys,
    IEnumerable<String^>^ edgePropertyKeys,
    GraphSonMode mode
)
```

F#

```
static member OutputGraph :
    graph : IGraph *
    jsonOutputStream : Stream *
    vertexPropertyKeys : IEnumerable<string> *
    edgePropertyKeys : IEnumerable<string> *
    mode : GraphSonMode -> unit
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

the graph to serialize to JSON

jsonOutputStream

Type: [System.IO.Stream](#)

the JSON OutputStream to write the Graph data to

vertexPropertyKeys

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

the keys of the vertex elements to write to JSON

edgePropertyKeys

Type: [System.Collections.Generic.IEnumerable\(String\)](#)

the keys of the edge elements to write to JSON

IElementFactory Interface

A factory responsible for creating graph elements. Abstracts the way that graph elements are created. In most cases a Graph is responsible for element creation, but there are cases where more control over how vertices and edges are constructed.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IElementFactory
```

VB

```
Public Interface IElementFactory
```

C++

```
public interface class IElementFactory
```

F#

```
type IElementFactory = interface end
```

The **IElementFactory** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------|--------------------------------|
|  | CreateEdge | Creates a new Edge instance. |
|  | CreateVertex | creates a new Vertex instance. |

See Also

[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON Namespace](#)

IElementFactory.IElementFactory Methods

The [IElementFactory](#) type exposes the following members.

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------------|--------------------------------|
|  | CreateEdge | Creates a new Edge instance. |
|  | CreateVertex | creates a new Vertex instance. |

See Also

[IElementFactory Interface](#)

[VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON Namespace](#)

IElementFactory.CreateEdge Method

Creates a new Edge instance.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IEdge CreateEdge(  
    Object id,  
    IVertex out_,  
    IVertex in_,  
    string label  
)
```

VB

```
Function CreateEdge (  
    id As Object,  
    out_ As IVertex,  
    in_ As IVertex,  
    label As String  
) As IEdge
```

C++

```
IEdge^ CreateEdge(  
    Object^ id,  
    IVertex^ out_,  
    IVertex^ in_,  
    String^ label  
)
```

F#

```
abstract CreateEdge :  
    id : Object *  
    out_ : IVertex *  
    in_ : IVertex *  
    label : string -> IEdge
```

Parameters

id

Type: [System.Object](#)

[Missing <param name="id"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.IElementFactory.CreateEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

out_

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="out_" /> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.IElementFactory.CreateEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

in_

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="in_" /> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.IElementFactory.CreateEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

label

Type: [System.String](#)

[Missing <param name="label" /> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.IElementFactory.CreateEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Return Value

Type: [IEdge](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.IElementFactory.CreateEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

creates a new Vertex instance.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IVertex CreateVertex(  
    Object id  
)
```

VB

```
Function CreateVertex (  
    id As Object  
) As IVertex
```

C++

```
IVertex^ CreateVertex(  
    Object^ id  
)
```

F#

```
abstract CreateVertex :  
    id : Object -> IVertex
```

Parameters

id

Type: [System.Object](#)

[Missing <param name="id"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.IElementFactory.CreateVertex(System.Object)"]

Return Value

Type: [IVertex](#)

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.IO.GraphSON.IElementFactory.CreateVertex(System.Object)"]

Classes

| Class | Description |
|------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  WrappedQuery | |
|  WrapperGraphContract | |
|  WrapperVertexQuery | A WrapperQuery is useful for wrapping the construction and results of a Vertex.query(). Any necessary Iterable wrapping must occur when Vertex.vertices() or Vertex.edges() is called. |

Interfaces

| Interface | Description |
|-----------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
|  IWrapperGraph | A WrapperGraph has an underlying graph object to which it delegates its operations. |

IWrapperGraph Interface

A WrapperGraph has an underlying graph object to which it delegates its operations.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IWrapperGraph
```

VB

```
Public Interface IWrapperGraph
```

C++

```
public interface class IWrapperGraph
```

F#

```
type IWrapperGraph = interface end
```

The **IWrapperGraph** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------|------------------------------------------|
|  | GetBaseGraph | Get the graph this wrapper delegates to. |

See Also

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers Namespace](#)

IWrapperGraph.IWrapperGraph Methods

The [IWrapperGraph](#) type exposes the following members.

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------------|------------------------------------------|
|  | GetBaseGraph | Get the graph this wrapper delegates to. |

See Also

[IWrapperGraph Interface](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers Namespace](#)

IWrapperGraph.GetBaseGraph Method

Get the graph this wrapper delegates to.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
IGraph GetBaseGraph ()
```

VB

```
Function GetBaseGraph As IGraph
```

C++

```
IGraph^ GetBaseGraph ()
```

F#

```
abstract GetBaseGraph : unit -> IGraph
```

Return Value

Type: [IGraph](#)

the underlying graph that this WrapperGraph delegates its operations to.

See Also

WrappedQuery Class

[Missing <summary> documentation for "T:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.WrappedQuery"]

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.WrappedQuery

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

```
C#
public class WrappedQuery : IQuery
```

```
VB
Public Class WrappedQuery
    Implements IQuery
```

```
C++
public ref class WrappedQuery : IQuery
```

```
F#
type WrappedQuery =
    class
        interface IQuery
    end
```

The **WrappedQuery** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------|-------------------------------------------------------------|
|  | WrappedQuery | Initializes a new instance of the WrappedQuery class |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------------------|-------------|
|  | Edges | |
|  | Has(String, Object) | |
|  | Has(T)(String, Compare, T) | |
|  | Interval(T) | |
|  | Limit | |

| | | |

WrappedQuery Constructor

Initializes a new instance of the [WrappedQuery](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public WrappedQuery(
    IQuery query,
    Func<IQuery, IEnumerable<IEdge>> edgesSelector,
    Func<IQuery, IEnumerable<IVertex>> verticesSelector
)
```

VB

```
Public Sub New (
    query As IQuery,
    edgesSelector As Func(Of IQuery, IEnumerable(Of IEdge)),
    verticesSelector As Func(Of IQuery, IEnumerable(Of IVertex))
)
```

C++

```
public:
    WrappedQuery(
        IQuery^ query,
        Func<IQuery^, IEnumerable<IEdge^>>^ edgesSelector,
        Func<IQuery^, IEnumerable<IVertex^>>^ verticesSelector
    )
```

F#

```
new :
    query : IQuery *
    edgesSelector : Func<IQuery, IEnumerable<IEdge>> *
    verticesSelector : Func<IQuery, IEnumerable<IVertex>> -> WrappedQuery
```

Parameters

query

Type: [VelocityGraph.Frontenac.Blueprints.IQuery](#)

[Missing <param name="query"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.WrappedQuery.#ctor(VelocityGraph.Frontenac.Blueprints.IQuery,System.Func{VelocityGraph.Frontenac.Blueprints.IQuery,System.Collections.Generic.IEnumerable{VelocityGraph.Frontenac.Blueprints.IEdge}},System.Func{VelocityGraph.Frontenac.Blueprints.IQuery,System.Collections.Generic.IEnumerable{VelocityGraph.Frontenac.Blueprints.IVertex}})"]

edgesSelector

Type: [System.Func\(IQuery, IEnumerable\(IEdge\)\)](#)

[Missing <param name="edgesSelector"/> documentation for

WrapperVertexQuery Class

A WrapperQuery is useful for wrapping the construction and results of a Vertex.query(). Any necessary Iterable wrapping must occur when Vertex.vertices() or Vertex.edges() is called.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.WrapperVertexQuery

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class WrapperVertexQuery : IVertexQuery,
    IQuery
```

VB

```
Public Class WrapperVertexQuery
    Implements IVertexQuery, IQuery
```

C++

```
public ref class WrapperVertexQuery : IVertexQuery,
    IQuery
```

F#

```
type WrapperVertexQuery =
    class
        interface IVertexQuery
        interface IQuery
    end
```

The **WrapperVertexQuery** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|-------------------------------------------------------------------|
|  | WrapperVertexQuery | Initializes a new instance of the WrapperVertexQuery class |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------|-------------|
|  | Count | |
|  | Direction | |
|  | Edges | |

VelocityDB Class Library

| | | |
|-----------------------------------------------------------------------------------|--------------------------------------------|--|

Initializes a new instance of the [WrapperVertexQuery](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public WrapperVertexQuery(
    IVertexQuery query,
    Func<IVertexQuery, IEnumerable<IEdge>> edgesSelector,
    Func<IVertexQuery, IEnumerable<IVertex>> verticesSelector
)
```

VB

```
Public Sub New (
    query As IVertexQuery,
    edgesSelector As Func(Of IVertexQuery, IEnumerable(Of IEdge)),
    verticesSelector As Func(Of IVertexQuery, IEnumerable(Of IVertex))
)
```

C++

```
public:
    WrapperVertexQuery(
        IVertexQuery^ query,
        Func<IVertexQuery^, IEnumerable<IEdge^>>^ edgesSelector,
        Func<IVertexQuery^, IEnumerable<IVertex^>>^ verticesSelector
    )
```

F#

```
new :
    query : IVertexQuery *
    edgesSelector : Func<IVertexQuery, IEnumerable<IEdge>> *
    verticesSelector : Func<IVertexQuery, IEnumerable<IVertex>> ->
WrapperVertexQuery
```

Parameters

query

Type: [VelocityGraph.Frontenac.Blueprints.IVertexQuery](#)

[Missing <param name="query"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.WrapperVertexQuery.#ctor(VelocityGraph.Frontenac.Blueprints.IVertexQuery,System.Func{VelocityGraph.Frontenac.Blueprints.IVertexQuery,System.Collections.Generic.IEnumerable{VelocityGraph.Frontenac.Blueprints.IEdge}},System.Func{VelocityGraph.Frontenac.Blueprints.IVertexQuery,System.Collections.Generic.IEnumerable{VelocityGraph.Frontenac.Blueprints.IVertex}})"]

edgesSelector

|  VertexIdTypes | |
|  WritethroughGraph | <p>This is a naive wrapper to make a non-transactional graph transactional by simply writing all mutations directly through to the wrapped graph and not supporting transactional failures.</p> <p>Hence, this is not meant as a functional implementation of a TransactionalGraph but rather as a means to using non-transactional graphs where transactional graphs are expected and transactional failure can be excluded. BatchGraph is one such case.</p> <p>Note, the constructor will throw an exception if the given graph already supports transactions.</p> |

Enumerations

| Enumeration | Description |
|------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  VertexIdType | Type of vertex ids expected by BatchGraph. The default is IdType.OBJECT. Use the IdType that best matches the used vertex id types in order to save memory. |

BatchGraph Class

BatchGraph is a wrapper that enables batch loading of a large number of edges and vertices by chunking the entire load into smaller batches and maintaining a memory-efficient vertex cache so that the entire transactional state can be flushed after each chunk is loaded.

BatchGraph is ONLY meant for loading data and does not support any retrieval or removal operations. That is, BatchGraph only supports the following methods: - addVertex for adding vertices - addEdge for adding edges - getVertex to be used when adding edges - Property getter, setter and removal methods for vertices and edges.

An important limitation of BatchGraph is that edge properties can only be set immediately after the edge has been added. If other vertices or edges have been created in the meantime, setting, getting or removing properties will throw exceptions. This is done to avoid caching of edges which would require a great amount of memory.

BatchGraph wraps TransactionalGraph. To wrap arbitrary graphs, use wrap which will additionally wrap non-transactional.

BatchGraph can also automatically set the provided element ids as properties on the respective element. Use setVertexIdKey and setEdgeIdKey to set the keys for the vertex and edge properties respectively. This allows to make the loaded baseGraph compatible for later wrapping with idInnerTinkerGraph.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.BatchGraph

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class BatchGraph : ITransactionalGraph, IGraph,
    IWrapperGraph
```

VB

```
Public Class BatchGraph
    Implements ITransactionalGraph, IGraph, IWrapperGraph
```

C++

```
public ref class BatchGraph : ITransactionalGraph,
    IGraph, IWrapperGraph
```

F#

```
type BatchGraph =
    class
        interface ITransactionalGraph
        interface IGraph
```

```

interface IWrapperGraph
end

```

The **BatchGraph** type exposes the following members.

Constructors

| Name | Description |
|--------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  BatchGraph(ITransactionalGraph) | Constructs a BatchGraph wrapping the provided baseGraph. |
|  BatchGraph(ITransactionalGraph, VertexIdType, Int64) | Constructs a BatchGraph wrapping the provided baseGraph, using the specified buffer size and expecting vertex ids of the specified IdType. Supplying vertex ids which do not match this type will throw exceptions. |

Properties

| Name | Description |
|------------------------------------------------------------------------------------------------------------|-------------|
|  Features | |

Methods

| Name | Description |
|---------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddEdge | |
|  AddVertex | |
|  Commit | Should only be invoked after loading is complete. Committing the transaction before will cause the loading to fail. |
|  GetBaseGraph | |
|  GetEdge | |
|  GetEdgeIdKey | Returns the key used to set the id on the edges or null if such has not been set via setEdgeIdKey |
|  GetEdges() | |
|  GetEdges(String, Object) | |
|  GetVertex | |
|  GetVertexIdKey | Returns the key used to set the id on the vertices or null if such has not been set via setVertexIdKey |
|  GetVertices() | |
|  GetVertices(String, Object) | |
|  IsLoadingFromScratch | Whether this BatchGraph is loading data from scratch or incrementally into an existing Graph. By default, this returns true. see setLoadingFromScratch |

| | | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | Query | |
|  | RemoveEdge | |
|  | RemoveVertex | |
|  | Rollback | Not supported for batch loading, since data may have already been partially persisted. |
|  | SetEdgeIdKey | Sets the key to be used when setting the edge id as a property on the respective edge. If the key is null, then no property will be set. If the loaded baseGraph should later be wrapped with IdGraph use idInnerTinkerGraph.ID. |
|  | SetLoadingFromScratch | Sets whether the Graph loaded through this instance of BatchGraph is loaded from scratch (i.e. the wrapped Graph is initially empty) or whether Graph is loaded incrementally into an existing Graph. In the former case, BatchGraph does not need to check for the existence of vertices with the wrapped Graph but only needs to consult its own cache which can be significantly faster. In the latter case, the cache is checked first but an additional check against the wrapped Graph may be necessary if the vertex does not exist. By default, BatchGraph assumes that the data is loaded from scratch. When setting loading from scratch to false, a vertex id key must be specified first using setVertexIdKey - otherwise an exception is thrown. |
|  | SetVertexIdKey | Sets the key to be used when setting the vertex id as a property on the respective vertex. If the key is null, then no property will be set. If the loaded baseGraph should later be wrapped with idInnerTinkerGraph use idInnerTinkerGraph.ID. |
|  | Shutdown | |
|  | ToString | (Overrides Object.ToString() .) |
|   | Wrap(IGraph) | Constructs a BatchGraph wrapping the provided baseGraph. Immediately returns the baseGraph if its a BatchGraph and wraps non-transactional graphs in an additional WritethroughGraph. |
|   | Wrap(IGraph, Int64) | Constructs a BatchGraph wrapping the provided baseGraph. Immediately returns the baseGraph if its a BatchGraph and wraps non-transactional graphs in an additional WritethroughGraph. |

Fields

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------------|---------------------|
|  | DefaultBufferSize | Default buffer size |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------|-----------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers.) |
|  CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers.) |
|  CreateTinkerGraph | (Defined by GraphHelpers.) |
|  GraphString | (Defined by StringFactory.) |
|  LoadGml | (Defined by GraphHelpers.) |
|  LoadGraphml | (Defined by GraphHelpers.) |
|  LoadGraphson | (Defined by GraphHelpers.) |
|  ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |
|  SaveDotNet | (Defined by GraphHelpers.) |
|  SaveGml | (Defined by GraphHelpers.) |
|  SaveGraphml | (Defined by GraphHelpers.) |
|  SaveGraphson | (Defined by GraphHelpers.) |

BatchGraph.GetEdges Method (String, Object)

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.BatchGraph.GetEdges(System.String,System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IEdge> GetEdges (  
    string key,  
    Object value  
)
```

VB

```
Public Function GetEdges (  
    key As String,  
    value As Object  
) As IEnumerable(Of IEdge)
```

C++

```
public:  
virtual IEnumerable<IEdge^>^ GetEdges (  
    String^ key,  
    Object^ value  
) sealed
```

F#

```
abstract GetEdges :  
    key : string *  
    value : Object -> IEnumerable<IEdge>  
override GetEdges :  
    key : string *  
    value : Object -> IEnumerable<IEdge>
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.BatchGraph.GetEdges(System.String,System.Object)"]

value

Type: [System.Object](#)

BatchGraph.SetEdgeIdKey Method

Sets the key to be used when setting the edge id as a property on the respective edge. If the key is null, then no property will be set. If the loaded baseGraph should later be wrapped with IdGraphuse idInnerTinkerGraph.ID.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void SetEdgeIdKey (
    string key
)
```

VB

```
Public Sub SetEdgeIdKey (
    key As String
)
```

C++

```
public:
void SetEdgeIdKey (
    String^ key
)
```

F#

```
member SetEdgeIdKey :
    key : string -> unit
```

Parameters

key

Type: [System.String](#)

Key to be used.

See Also

[BatchGraph Class](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch Namespace](#)

BatchGraph.SetLoadingFromScratch Method

Sets whether the Graph loaded through this instance of BatchGraph is loaded from scratch (i.e. the wrapped Graph is initially empty) or whether Graph is loaded incrementally into an existing Graph. In the former case, BatchGraph does not need to check for the existence of vertices with the wrapped Graph but only needs to consult its own cache which can be significantly faster. In the latter case, the cache is checked first but an additional check against the wrapped Graph may be necessary if the vertex does not exist. By default, BatchGraph assumes that the data is loaded from scratch. When setting loading from scratch to false, a vertex id key must be specified first using `setVertexIdKey` - otherwise an exception is thrown.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void SetLoadingFromScratch (  
    bool fromScratch  
)
```

VB

```
Public Sub SetLoadingFromScratch (  
    fromScratch As Boolean  
)
```

C++

```
public:  
void SetLoadingFromScratch (  
    bool fromScratch  
)
```

F#

```
member SetLoadingFromScratch :  
    fromScratch : bool -> unit
```

Parameters

fromScratch

Type: [System.Boolean](#)

Sets whether the Graph loaded through this instance of BatchGraph is loaded from scratch

See Also

WritethroughGraph Class

This is a naive wrapper to make a non-transactional graph transactional by simply writing all mutations directly through to the wrapped graph and not supporting transactional failures.

Hence, this is not meant as a functional implementation of a TransactionalGraph but rather as a means to using non-transactional graphs where transactional graphs are expected and transactional failure can be excluded. BatchGraph is one such case.

Note, the constructor will throw an exception if the given graph already supports transactions.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.WritethroughGraph

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class WritethroughGraph : IWrapperGraph,
    ITransactionalGraph, IGraph
```

VB

```
Public Class WritethroughGraph
    Implements IWrapperGraph, ITransactionalGraph, IGraph
```

C++

```
public ref class WritethroughGraph : IWrapperGraph,
    ITransactionalGraph, IGraph
```

F#

```
type WritethroughGraph =
    class
        interface IWrapperGraph
        interface ITransactionalGraph
        interface IGraph
    end
```

The **WritethroughGraph** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------------|------------------------------------------------------------------|
|  | WritethroughGraph | Initializes a new instance of the WritethroughGraph class |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------|-------------------------------------------------------------------------------|
|  | Features | Returns the features of the underlying graph but with transactions supported. |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------------|-------------------------------------------------|
|  | AddEdge | |
|  | AddVertex | |
|  | Commit | |
|  | GetBaseGraph | |
|  | GetEdge | |
|  | GetEdges() | |
|  | GetEdges(String, Object) | |
|  | GetVertex | |
|  | GetVertices() | |
|  | GetVertices(String, Object) | |
|  | Query | |
|  | RemoveEdge | |
|  | RemoveVertex | |
|  | Rollback | |
|  | Shutdown | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  | CreateTinkerGraph | (Defined by GraphHelpers .) |
|  | GraphString | (Defined by StringFactory .) |
|  | LoadGml | (Defined by GraphHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  LoadGraphml | (Defined by GraphHelpers.) |
|  LoadGraphson | (Defined by GraphHelpers.) |
|  ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |
|  SaveDotNet | (Defined by GraphHelpers.) |
|  SaveGml | (Defined by GraphHelpers.) |
|  SaveGraphml | (Defined by GraphHelpers.) |
|  SaveGraphson | (Defined by GraphHelpers.) |

WritethroughGraph Constructor

Initializes a new instance of the [WritethroughGraph](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public WritethroughGraph(  
    IGraph graph  
)
```

VB

```
Public Sub New (  
    graph As IGraph  
)
```

C++

```
public:  
WritethroughGraph(  
    IGraph^ graph  
)
```

F#

```
new :  
    graph : IGraph -> WritethroughGraph
```

Parameters

graph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

[Missing <param name="graph"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.WritethroughGraph.#ctor(VelocityGraph.Frontenac.Blueprints.IGraph)"]

WritethroughGraph.Features Property

Returns the features of the underlying graph but with transactions supported.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Features Features { get; }
```

VB

```
Public ReadOnly Property Features As Features  
    Get
```

C++

```
public:  
virtual property Features^ Features {  
    Features^ get () sealed;  
}
```

F#

```
abstract Features : Features with get  
override Features : Features with get
```

Property Value

Type: [Features](#)

The features of the underlying graph but with transactions supported

Implements

[IGraph.Features](#)

|------------------------------------------------------------------------------------|------------------------------|-------------|
|  | IVertexCache | |

IVertexCache Interface

[Missing <summary> documentation for "T:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache.IVertexCache"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

```
C#  
public interface IVertexCache
```

```
VB  
Public Interface IVertexCache
```

```
C++  
public interface class IVertexCache
```

```
F#  
type IVertexCache = interface end
```

The **IVertexCache** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------|-------------|
|  | Contains | |
|  | GetEntry | |
|  | NewTransaction | |
|  | Set | |
|  | SetId | |

ObjectIdVertexCache.Set Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache.ObjectIdVertexCache.Set(VelocityGraph.Frontenac.Blueprints.IVertex,System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void Set (
    IVertex vertex,
    Object externalId
)
```

VB

```
Public Sub Set (
    vertex As IVertex,
    externalId As Object
)
```

C++

```
public:
virtual void Set(
    IVertex^ vertex,
    Object^ externalId
) sealed
```

F#

```
abstract Set :
    vertex : IVertex *
    externalId : Object -> unit
override Set :
    vertex : IVertex *
    externalId : Object -> unit
```

Parameters

vertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="vertex"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache.ObjectIdVertexCache.Set(VelocityGraph.Frontenac.Blueprints.IVertex,System.Object)"]

externalId

Type: [System.Object](#)

[Missing <param name="externalId"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache.ObjectIdVertexCache.Set(VelocityGraph.Frontenac.Blueprints.IVertex,System.Object)"]

Implements

[IVertexCache.Set\(IVertex, Object\)](#)

See Also

[ObjectIdVertexCache Class](#)

ObjectIdVertexCache.SetId Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache.ObjectIdVertexCache.SetId(System.Object,System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void SetId(  
    Object vertexId,  
    Object externalId  
)
```

VB

```
Public Sub SetId (  
    vertexId As Object,  
    externalId As Object  
)
```

C++

```
public:  
virtual void SetId(  
    Object^ vertexId,  
    Object^ externalId  
) sealed
```

F#

```
abstract SetId :  
    vertexId : Object *  
    externalId : Object -> unit  
override SetId :  
    vertexId : Object *  
    externalId : Object -> unit
```

Parameters

vertexId

Type: [System.Object](#)

[Missing <param name="vertexId"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache.ObjectIdVertexCache.SetId(System.Object,System.Object)"]

externalId

Type: [System.Object](#)

[Missing <param name="externalId"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache.ObjectIdVertexCache.SetId(System.Object,System.Object)"]

Implements

[IVertexCache.SetId\(Object, Object\)](#)

See Also

[ObjectIdVertexCache Class](#)

StringCompression Class

[Missing <summary> documentation for "T:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache.StringCompression"]

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache.StringCompression

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache.UrlCompression](#)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Batch.Cache](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public abstract class StringCompression
```

VB

```
Public MustInherit Class StringCompression
```

C++

```
public ref class StringCompression abstract
```

F#

```
[<AbstractClassAttribute>]  
type StringCompression = class end
```

The **StringCompression** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------|-------------|
|  | Compress | |

Fields

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------|-------------|
|  | NoCompression | |

Classes

| Class | Description |
|--------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  EventEdge | An edge with a GraphChangeListener attached. Those listeners are notified when changes occur to the properties of the edge. |
|  EventEdgelterable | A sequence of edges that applies the list of listeners into each edge. |
|  EventElement | An element with a GraphChangeListener attached. Those listeners are notified when changes occur to the properties of the element. |
|  EventGraph | An eventInnerTinkerGraph is a wrapper to existing Graph implementations and provides for graph events to be raised to one or more listeners on changes to the Graph. Notifications to the listeners occur for the following events: new vertex/edge, vertex/edge property changed, vertex/edge property removed, vertex/edge removed. The limiting factor to events being raised is related to out-of-process functions changing graph elements. To gather events from eventInnerTinkerGraph, simply provide an implementation of the {@link GraphChangeListener} to the eventInnerTinkerGraph by utilizing the addListener method. eventInnerTinkerGraph allows the addition of multiple GraphChangeListener implementations. Each listener will be notified in the order that it was added. |
|  EventIndex | An index that wraps graph elements in the "evented" way. This class does not directly raise graph events, but passes the GraphChangeListener to the edges and vertices returned from indices so that they may raise graph events. |
|  EventIndexableGraph | EventIndexableGraph is merely a proxy to index methods exposing eventInnerTinkerGraph methods in the "evented" way. Like the eventInnerTinkerGraph it extends from, this graph implementations raise notifications to the listeners for the following events: new vertex/edge, vertex/edge property changed, vertex/edge property removed, vertex/edge removed. |
|  EventTransactionalGraph | |
|  EventTransactionalIndexableGraph | The transactional and indexable implementation of eventInnerTinkerGraph where events are raised in batch in the order they changes occurred to the graph, but only after a successful commit to the underlying graph. |
|  EventTrigger | |

| | | |
|-----------------------------------------------------------------------------------|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
|  | EventVertex | An vertex with a GraphChangedListener attached. Those listeners are notified when changes occur to the properties of the vertex. |
|  | EventVertexIterable | A sequence of vertices that applies the list of listeners into each vertex. |

EventEdge Class

An edge with a GraphChangedListener attached. Those listeners are notified when changes occur to the properties of the edge.

Inheritance Hierarchy

[System.Object](#)

[VelocityGraph.Frontenac.Blueprints.DictionaryElement](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventElement](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventEdge

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class EventEdge : EventElement, IEdge,
    IElement, IDictionary<string, Object>, ICollection<KeyValuePair<string,
Object>>,
    IEnumerable<KeyValuePair<string, Object>>, IEnumerable,
    IDictionary, ICollection
```

VB

```
Public Class EventEdge
    Inherits EventElement
    Implements IEdge, IElement, IDictionary(Of String, Object),
    ICollection(Of KeyValuePair(Of String, Object)), IEnumerable(Of
KeyValuePair(Of String, Object)),
    IEnumerable, IDictionary, ICollection
```

C++

```
public ref class EventEdge : public EventElement,
    IEdge, IElement, IDictionary<String^, Object^>,
    ICollection<KeyValuePair<String^, Object^>>,
    IEnumerable<KeyValuePair<String^, Object^>>,
    IEnumerable, IDictionary, ICollection
```

F#

```
type EventEdge =
    class
        inherit EventElement
        interface IEdge
        interface IElement
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
        interface IDictionary
```

```

interface ICollection
end

```

The **EventEdge** type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------|----------------------------------------------------------|
|  | EventEdge | Initializes a new instance of the EventEdge class |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------|-------------|
|  | Label | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|-------------|
|  | GetBaseEdge | |
|  | GetVertex | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers.) |
|  | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers.) |
|  | EdgeString | (Defined by StringFactory.) |
|  | GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers.) |
|  | HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers.) |
|  | HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers.) |
|  | RelabelEdge | An edge is relabeled by creating a new edge with the same properties, but new label. Note that an edge is deleted and an edge is added. (Defined by EdgeHelpers.) |

| | |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers .) |
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers .) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws ArgumentException whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers .) |

EventElement.EventElement Methods

The [EventElement](#) type exposes the following members.

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------|-----------------------------------------------------------------------------|
|  | Equals | (Overrides Object.Equals(Object).) |
|  | GetBaseElement | |
|  | GetHashCode | (Overrides Object.GetHashCode().) |
|  | GetProperty | (Overrides DictionaryElement.GetProperty(String).) |
|  | GetPropertyKeys | (Overrides DictionaryElement.GetPropertyKeys().) |
|  | Remove | (Overrides DictionaryElement.Remove().) |
|  | RemoveProperty | (Overrides DictionaryElement.RemoveProperty(String).) |
|  | SetProperty | (Overrides DictionaryElement.SetProperty(String, Object).) |
|  | ToString | (Overrides Object.ToString().) |

EventGraph Class

An eventInnerTinkerGraph is a wrapper to existing Graph implementations and provides for graph events to be raised to one or more listeners on changes to the Graph. Notifications to the listeners occur for the following events: new vertex/edge, vertex/edge property changed, vertex/edge property removed, vertex/edge removed. The limiting factor to events being raised is related to out-of-process functions changing graph elements. To gather events from eventInnerTinkerGraph, simply provide an implementation of the {@link GraphChangeListener} to the eventInnerTinkerGraph by utilizing the addListener method. eventInnerTinkerGraph allows the addition of multiple GraphChangeListener implementations. Each listener will be notified in the order that it was added.

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventIndexableGraph](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventTransactionalGraph](#)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class EventGraph : IGraph, IWrapperGraph,
    IDisposable
```

VB

```
Public Class EventGraph
    Implements IGraph, IWrapperGraph, IDisposable
```

C++

```
public ref class EventGraph : IGraph,
    IWrapperGraph, IDisposable
```

F#

```
type EventGraph =
    class
        interface IGraph
        interface IWrapperGraph
        interface IDisposable
    end
```

The **EventGraph** type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|----------------------------|-----------------------------------------------------------|
|  | EventGraph | Initializes a new instance of the EventGraph class |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------|-------------|
|  | Features | |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------------|------------------------------------------------------|
|  | AddEdge | |
|  | AddListener | |
|  | AddVertex | |
|  | Dispose | Releases all resources used by the EventGraph |
|  | GetBaseGraph | |
|  | GetEdge | |
|  | GetEdges() | |
|  | GetEdges(String, Object) | |
|  | GetListenerIterator | |
|  | GetTrigger | |
|  | GetVertex | |
|  | GetVertices() | |
|  | GetVertices(String, Object) | |
|  | Query | |
|  | RemoveAllListeners | |
|  | RemoveEdge | |
|  | RemoveListener | |
|  | RemoveVertex | |
|  | Shutdown | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------|-----------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers.) |
|  CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers.) |
|  CreateTinkerGraph | (Defined by GraphHelpers.) |
|  GraphString | (Defined by StringFactory.) |
|  LoadGml | (Defined by GraphHelpers.) |
|  LoadGraphml | (Defined by GraphHelpers.) |
|  LoadGraphson | (Defined by GraphHelpers.) |
|  ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |
|  SaveDotNet | (Defined by GraphHelpers.) |
|  SaveGml | (Defined by GraphHelpers.) |
|  SaveGraphml | (Defined by GraphHelpers.) |
|  SaveGraphson | (Defined by GraphHelpers.) |

EventIndex Class

An index that wraps graph elements in the "evented" way. This class does not directly raise graph events, but passes the GraphChangedListener to the edges and vertices returned from indices so that they may raise graph events.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventIndex

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class EventIndex : IIndex
```

VB

```
Public Class EventIndex
    Implements IIndex
```

C++

```
public ref class EventIndex : IIndex
```

F#

```
type EventIndex =
    class
        interface IIndex
    end
```

The **EventIndex** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------------|-----------------------------------------------------------|
|  | EventIndex | Initializes a new instance of the EventIndex class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------|-------------|
|  | Name | |
|  | Type | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------|-------------------------------------------------|
|  | Count | |
|  | Get | |
|  | Put | |
|  | Query | |
|  | Remove | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|----------------------------------------------|
|  | IndexString | (Defined by StringFactory .) |

EventIndex.Get Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventIndex.Get(System.String,System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IElement> Get (
    string key,
    Object value
)
```

VB

```
Public Function Get (
    key As String,
    value As Object
) As IEnumerable(Of IElement)
```

C++

```
public:
virtual IEnumerable<IElement^>^ Get (
    String^ key,
    Object^ value
) sealed
```

F#

```
abstract Get :
    key : string *
    value : Object -> IEnumerable<IElement>
override Get :
    key : string *
    value : Object -> IEnumerable<IElement>
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventIndex.Get(System.String,System.Object)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventIndex.Get(System.String,System.Object)"]

Return Value

Type: [IEnumerable\(IElement\)](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventIndex.Get(System.String,System.Object)"]

Implements

[IIndex.Get\(String, Object\)](#)

EventIndex.Put Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void Put (  
    string key,  
    Object value,  
    IElement element  
)
```

VB

```
Public Sub Put (  
    key As String,  
    value As Object,  
    element As IElement  
)
```

C++

```
public:  
virtual void Put(  
    String^ key,  
    Object^ value,  
    IElement^ element  
) sealed
```

F#

```
abstract Put :  
    key : string *  
    value : Object *  
    element : IElement -> unit  
override Put :  
    key : string *  
    value : Object *  
    element : IElement -> unit
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

element

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

[Missing <param name="element"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

Implements

EventIndexableGraph Class

EventIndexableGraph is merely a proxy to index methods exposing eventInnerTinkerGraph methods in the "evented" way. Like the eventInnerTinkerGraph it extends from, this graph implementations raise notifications to the listeners for the following events: new vertex/edge, vertex/edge property changed, vertex/edge property removed, vertex/edge removed.

Inheritance Hierarchy

[System.Object](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventGraph](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventIndexableGraph

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventTransactionalIndexableGraph](#)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class EventIndexableGraph : EventGraph,
    IIndexableGraph, IGraph
```

VB

```
Public Class EventIndexableGraph
    Inherits EventGraph
    Implements IIndexableGraph, IGraph
```

C++

```
public ref class EventIndexableGraph : public EventGraph,
    IIndexableGraph, IGraph
```

F#

```
type EventIndexableGraph =
    class
        inherit EventGraph
        interface IIndexableGraph
        interface IGraph
    end
```

The **EventIndexableGraph** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------|--------------------------------------------------------------------|
|  | EventIndexableGraph | Initializes a new instance of the EventIndexableGraph class |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|-------------|
|  | CreateIndex | |
|  | DropIndex | |
|  | GetIndex | |
|  | GetIndices | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddUniqueVertex | Add a vertex to a graph only if no other vertex in the provided Index is indexed by the property key/value pair. If a vertex already exists with that key/value pair, return the pre-existing vertex. (Defined by IndexableGraphHelpers .) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  | CreateTinkerGraph | (Defined by GraphHelpers .) |
|  | GraphString | (Defined by StringFactory .) |
|  | LoadGml | (Defined by GraphHelpers .) |
|  | LoadGraphml | (Defined by GraphHelpers .) |
|  | LoadGraphson | (Defined by GraphHelpers .) |
|  | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers .) |
|  | SaveDotNet | (Defined by GraphHelpers .) |
|  | SaveGml | (Defined by GraphHelpers .) |
|  | SaveGraphml | (Defined by GraphHelpers .) |
|  | SaveGraphson | (Defined by GraphHelpers .) |

Parameters

transactionalGraph

Type: [VelocityGraph.Frontenac.Blueprints.ITransactionalGraph](#)

[Missing <param name="transactionalGraph"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventTransactionalGraph.#ctor(VelocityGraph.Frontenac.Blueprints.ITransactionalGraph)"]

See Also

[EventTransactionalGraph Class](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event Namespace](#)

EventTransactionalGraph.EventTransactionalGraph Methods

The [EventTransactionalGraph](#) type exposes the following members.

Methods

| Name | Description |
|------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Commit | A commit only fires the event queue on successful operation. If the commit operation to the underlying graph fails, the event queue will not fire and the queue will not be reset. |
|  Rollback | A rollback only resets the event queue on successful operation. If the rollback operation to the underlying graph fails, the event queue will not be reset. |

Extension Methods

| Name | Description |
|------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  CreateTinkerGraph | (Defined by GraphHelpers .) |
|  GraphString | (Defined by StringFactory .) |
|  LoadGml | (Defined by GraphHelpers .) |
|  LoadGraphml | (Defined by GraphHelpers .) |
|  LoadGraphson | (Defined by GraphHelpers .) |
|  ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers .) |
|  SaveDotNet | (Defined by GraphHelpers .) |
|  SaveGml | (Defined by GraphHelpers .) |
|  SaveGraphml | (Defined by GraphHelpers .) |
|  SaveGraphson | (Defined by GraphHelpers .) |

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class EventVertex : EventElement,
    IVertex, IElement, IDictionary<string, Object>,
    ICollection<KeyValuePair<string, Object>>,
    IEnumerable<KeyValuePair<string, Object>>,
    IEnumerable, IDictionary, ICollection
```

VB

```
Public Class EventVertex
    Inherits EventElement
    Implements IVertex, IElement, IDictionary(Of String, Object),
    ICollection(Of KeyValuePair(Of String, Object)), IEnumerable(Of
    KeyValuePair(Of String, Object)),
    IEnumerable, IDictionary, ICollection
```

C++

```
public ref class EventVertex : public EventElement,
    IVertex, IElement, IDictionary<String^, Object^>,
    ICollection<KeyValuePair<String^, Object^>>,
    IEnumerable<KeyValuePair<String^, Object^>>,
    IEnumerable, IDictionary, ICollection
```

F#

```
type EventVertex =
    class
        inherit EventElement
        interface IVertex
        interface IElement
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
        interface IDictionary
```

```
interface ICollection
end
```

The **EventVertex** type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|------------------------------------------------------------|
|  | EventVertex | Initializes a new instance of the EventVertex class |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------|-------------|
|  | Vertex | |

Methods

| | Name | Description |
|------------------------------------------------------------------------------------|-----------------------------|-------------|
|  | AddEdge | |
|  | GetEdges | |
|  | GetVertices | |
|  | Query | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers .) |
|  | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers .) |
|  | GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers .) |
|  | HaveEqualEdges | Test whether the two vertices have equal edge sets (Defined by VertexHelpers .) |
|  | HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers .) |
|  | HaveEqualNeighborhood | Test whether the two vertices have equal properties and edge sets. (Defined by VertexHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers.) |
|  SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers.) |
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers.) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws ArgumentException whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers.) |
|  VertexString | (Defined by StringFactory.) |

|  | HaveEqualNeighborhood | Test whether the two vertices have equal properties and edge sets. (Defined by VertexHelpers .) |
|  | HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers .) |
|  | SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers .) |
|  | SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers .) |
|  | ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws |

VelocityDB Class Library

| | | |
|-----------------------------------------------------------------------------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| | | ArgumentException whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers.) |
|  | VertexString | (Defined by StringFactory.) |

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.EventVertex.AddEdge(System.Object,System.String,VelocityGraph.Frontenac.Blueprints.IVertex)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEdge AddEdge (
    Object id,
    string label,
    IVertex vertex
)
```

VB

```
Public Function AddEdge (
    id As Object,
    label As String,
    vertex As IVertex
) As IEdge
```

C++

```
public:
virtual IEdge^ AddEdge (
    Object^ id,
    String^ label,
    IVertex^ vertex
) sealed
```

F#

```
abstract AddEdge :
    id : Object *
    label : string *
    vertex : IVertex -> IEdge
override AddEdge :
    id : Object *
    label : string *
    vertex : IVertex -> IEdge
```

Parameters

id

Type: [System.Object](#)

[Missing <param name="id"/> documentation for

Classes

| Class | Description |
|---------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
|  ConsoleGraphChangedListener | An example listener that writes a message to the console for each event that fires from the graph. |
|  EdgeAddedEvent | |
|  EdgePropertyChangedEvent | |
|  EdgePropertyEvent | |
|  EdgePropertyEventContract | |
|  EdgePropertyRemovedEvent | Event fired when an edge property is removed. |
|  EdgeRemovedEvent | Event fired when an edge is removed. |
|  EventContract | |
|  GraphChangedListenerContract | |
|  StubGraphChangedListener | An event listener that acts as a counter for changes to the graph. |
|  VertexAddedEvent | Event that fires when a vertex is added to a graph. |
|  VertexPropertyChangedEvent | Event that fires when a property changes on a vertex. |
|  VertexPropertyEvent | Base class for property changed events. |
|  VertexPropertyEventContract | |
|  VertexPropertyRemovedEvent | Event fired when a vertex property is removed. |
|  VertexRemovedEvent | Event fired when a vertex is removed. |

Interfaces

| Interface | Description |
|---------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  IEvent | An event generated by changes to the graph. |
|  IGraphChangedListener | Interface for a listener to eventInnerTinkerGraph change events. Implementations of this interface should be added to the list of listeners on the addListener method on the eventInnerTinkerGraph. |

ConsoleGraphChangedListener Class

An example listener that writes a message to the console for each event that fires from the graph.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener.ConsoleGraphChangedListener

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener](#)

EdgeRemovedEvent Class

Event fired when an edge is removed.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener.EdgeRemovedEvent

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class EdgeRemovedEvent : IEvent
```

VB

```
Public Class EdgeRemovedEvent  
    Implements IEvent
```

C++

```
public ref class EdgeRemovedEvent : IEvent
```

F#

```
type EdgeRemovedEvent =  
    class  
        interface IEvent  
    end
```

The **EdgeRemovedEvent** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------------------|-----------------------------------------------------------------|
|  | EdgeRemovedEvent | Initializes a new instance of the EdgeRemovedEvent class |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------|-------------|
|  | FireEvent | |

EdgeRemovedEvent Constructor

Initializes a new instance of the [EdgeRemovedEvent](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public EdgeRemovedEvent (  
    IEdge edge,  
    IDictionary<string, Object> props  
)
```

VB

```
Public Sub New (  
    edge As IEdge,  
    props As IDictionary(Of String, Object)  
)
```

C++

```
public:  
EdgeRemovedEvent (  
    IEdge^ edge,  
    IDictionary<String^, Object^>^ props  
)
```

F#

```
new :  
    edge : IEdge *  
    props : IDictionary<string, Object> -> EdgeRemovedEvent
```

Parameters

edge

Type: [VelocityGraph.Frontenac.Blueprints.IEdge](#)

[Missing <param name="edge"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener.EdgeRemovedEvent.#ctor(VelocityGraph.Frontenac.Blueprints.IEdge,System.Collections.Generic.IDictionary{System.String,System.Object})"]

props

Type: [System.Collections.Generic.IDictionary\(String, Object\)](#)

[Missing <param name="props"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener.EdgeRemovedEvent.#ctor(VelocityGraph.Frontenac.Blueprints.IEdge,System.Collections.Generic.IDictionary{System.String,System.Object})"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void FireEvent (
    IEnumerable<IGraphChangedListener> eventListeners
)
```

VB

```
Public Sub FireEvent (
    eventListeners As IEnumerable(Of IGraphChangedListener)
)
```

C++

```
public:
virtual void FireEvent (
    IEnumerable<IGraphChangedListener^>^ eventListeners
) sealed
```

F#

```
abstract FireEvent :
    eventListeners : IEnumerable<IGraphChangedListener> -> unit
override FireEvent :
    eventListeners : IEnumerable<IGraphChangedListener> -> unit
```

Parameters

eventListeners

Type: [System.Collections.Generic.IEnumerator\(IGraphChangedListener\)](#)

[Missing <param name="eventListeners"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener.EdgeRemovedEvent.FireEvent(System.Collections.Generic.IEnumerator{VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener.IGraphChangedListener})"]

Implements

[IEvent.FireEvent\(IEnumerator\(IGraphChangedListener\)\)](#)

C#

```
void FireEvent (
    IEnumerable<IGraphChangedListener> eventListeners
)
```

VB

```
Sub FireEvent (
    eventListeners As IEnumerable(Of IGraphChangedListener)
)
```

C++

```
void FireEvent (
    IEnumerable<IGraphChangedListener^>^ eventListeners
)
```

F#

```
abstract FireEvent :
    eventListeners : IEnumerable<IGraphChangedListener> -> unit
```

Parameters

eventListeners

Type: [System.Collections.Generic.IEnumerator\(IGraphChangedListener\)](#)

[Missing <param name="eventListeners"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener.IEvent.FireEvent(System.Collections.Generic.IEnumerator{VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener.IGraphChangedListener})"]

IGraphChangedListener Interface

Interface for a listener to eventInnerTinkerGraph change events. Implementations of this interface should be added to the list of listeners on the addListener method on the eventInnerTinkerGraph.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Event.Listener](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IGraphChangedListener
```

VB

```
Public Interface IGraphChangedListener
```

C++

```
public interface class IGraphChangedListener
```

F#

```
type IGraphChangedListener = interface end
```

The **IGraphChangedListener** type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------|---------------------------------------------------|
|  | EdgeAdded | Raised after a new edge is added. |
|  | EdgePropertyChanged | Raised after the property of a edge changed. |
|  | EdgePropertyRemoved | Raised after an edge property was removed. |
|  | EdgeRemoved | Raised after an edge was removed from the graph. |
|  | VertexAdded | Raised when a new Vertex is added. |
|  | VertexPropertyChanged | Raised after the property of a vertex changed. |
|  | VertexPropertyRemoved | Raised after a vertex property was removed. |
|  | VertexRemoved | Raised after a vertex was removed from the graph. |

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id Namespace

[Missing <summary> documentation for "N:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id"]

Classes

| Class | Description |
|-----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  IdEdge | |
|  IdEdgeIndex | |
|  IdElement | |
|  IdGraph | A Graph implementation which wraps another Graph implementation, enabling custom element IDs even for those graphs which don't otherwise support them. The base Graph must be an instance of KeyIndexableGraph. It <i>may</i> be an instance of IIndexableGraph, in which case its indices will be wrapped appropriately. It <i>may</i> be an instance of TransactionalGraph, in which case transaction operations will be passed through. For those graphs which support vertex indices but not edge indices (or vice versa), you may configure idInnerTinkerGraph to use custom IDs only for vertices or only for edges. |
|  IdVertex | |
|  IdVertexIndex | |

Interfaces

| Interface | Description |
|------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
|  IdGraph.IIdFactory | A factory for IDs of newly-created vertices and edges (where an ID is not otherwise specified). |

IdEdge Class

[Missing <summary> documentation for "T:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdge"]

Inheritance Hierarchy

[System.Object](#)

[VelocityGraph.Frontenac.Blueprints.DictionaryElement](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdElement](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdge

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class IdEdge : IdElement, IEdge,
    IElement, IDictionary<string, Object>, ICollection<KeyValuePair<string,
Object>>,
    IEnumerable<KeyValuePair<string, Object>>, IEnumerable,
    IDictionary, ICollection
```

VB

```
Public Class IdEdge
    Inherits IdElement
    Implements IEdge, IElement, IDictionary(Of String, Object),
    ICollection(Of KeyValuePair(Of String, Object)), IEnumerable(Of
KeyValuePair(Of String, Object)),
    IEnumerable, IDictionary, ICollection
```

C++

```
public ref class IdEdge : public IdElement,
    IEdge, IElement, IDictionary<String^, Object^>,
    ICollection<KeyValuePair<String^, Object^>>,
    IEnumerable<KeyValuePair<String^, Object^>>,
    IEnumerable, IDictionary, ICollection
```

F#

```
type IdEdge =
    class
        inherit IdElement
        interface IEdge
        interface IElement
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
        interface IDictionary
```

```
interface ICollection
end
```

The **IdEdge** type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------|-------------------------------------------------------|
|  | IdEdge | Initializes a new instance of the IdEdge class |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------|-------------|
|  | Label | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|----------------------------------------------------|
|  | GetBaseEdge | |
|  | GetVertex | |
|  | ToString | (Overrides IdElement.ToString() .) |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers .) |
|  | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers .) |
|  | EdgeString | (Defined by StringFactory .) |
|  | GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers .) |
|  | HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers .) |
|  | HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  RelabelEdge | An edge is relabeled by creating a new edge with the same properties, but new label. Note that an edge is deleted and an edge is added. (Defined by EdgeHelpers.) |
|  SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers.) |
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers.) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws <code>ArgumentException</code> whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers.) |

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class IdEdgeIndex : IIndex
```

VB

```
Public Class IdEdgeIndex  
    Implements IIndex
```

C++

```
public ref class IdEdgeIndex : IIndex
```

F#

```
type IdEdgeIndex =  
    class  
        interface IIndex  
    end
```

The **IdEdgeIndex** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------|------------------------------------------------------------|
|  | IdEdgeIndex | Initializes a new instance of the IdEdgeIndex class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------|-------------|
|  | Name | |
|  | Type | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------|-------------------------------------------------|
|  | Count | |
|  | Get | |
|  | Put | |
|  | Query | |
|  | Remove | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|----------------------------------------------|
|  | IndexString | (Defined by StringFactory .) |

IdEdgeIndex Constructor

Initializes a new instance of the [IdEdgeIndex](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IdEdgeIndex(  
    IIndex baseIndex,  
    IdGraph idGraph  
)
```

VB

```
Public Sub New (  
    baseIndex As IIndex,  
    idGraph As IdGraph  
)
```

C++

```
public:  
IdEdgeIndex(  
    IIndex^ baseIndex,  
    IdGraph^ idGraph  
)
```

F#

```
new :  
    baseIndex : IIndex *  
    idGraph : IdGraph -> IdEdgeIndex
```

Parameters

baseIndex

Type: [VelocityGraph.Frontenac.Blueprints.IIndex](#)

[Missing <param name="baseIndex"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.#ctor(VelocityGraph.Frontenac.Blueprints.IIndex,VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdGraph)"]

idGraph

Type: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdGraph](#)

[Missing <param name="idGraph"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.#ctor(VelocityGraph.Frontenac.Blueprints.IIndex,VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdGraph)"]

IdEdgeIndex.Count Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Count(System.String,System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public long Count(  
    string key,  
    Object value  
)
```

VB

```
Public Function Count (  
    key As String,  
    value As Object  
) As Long
```

C++

```
public:  
virtual long long Count(  
    String^ key,  
    Object^ value  
) sealed
```

F#

```
abstract Count :  
    key : string *  
    value : Object -> int64  
override Count :  
    key : string *  
    value : Object -> int64
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Count(System.String,System.Object)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Count(System.String,System.Object)"]

Return Value

Type: [Int64](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Count(System.String,System.Object)"]

Implements

[IIndex.Count\(String, Object\)](#)

See Also

IdEdgeIndex.Get Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Get(System.String,System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IElement> Get (
    string key,
    Object value
)
```

VB

```
Public Function Get (
    key As String,
    value As Object
) As IEnumerable(Of IElement)
```

C++

```
public:
virtual IEnumerable<IElement^>^ Get (
    String^ key,
    Object^ value
) sealed
```

F#

```
abstract Get :
    key : string *
    value : Object -> IEnumerable<IElement>
override Get :
    key : string *
    value : Object -> IEnumerable<IElement>
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Get(System.String,System.Object)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Get(System.String,System.Object)"]

Return Value

Type: [IEnumerable\(IElement\)](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Get(System.String,System.Object)"]

Implements

[IIndex.Get\(String, Object\)](#)

See Also

[IdEdgeIndex Class](#)

IdEdgeIndex.Put Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void Put (  
    string key,  
    Object value,  
    IElement element  
)
```

VB

```
Public Sub Put (  
    key As String,  
    value As Object,  
    element As IElement  
)
```

C++

```
public:  
virtual void Put(  
    String^ key,  
    Object^ value,  
    IElement^ element  
) sealed
```

F#

```
abstract Put :  
    key : string *  
    value : Object *  
    element : IElement -> unit  
override Put :  
    key : string *  
    value : Object *  
    element : IElement -> unit
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

element

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

[Missing <param name="element"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

Implements

[IIndex.Put\(String, Object, IElement\)](#)

See Also

[IdEdgeIndex Class](#)

IdEdgeIndex.Query Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Query(System.String,System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IElement> Query(  
    string key,  
    Object value  
)
```

VB

```
Public Function Query (  
    key As String,  
    value As Object  
) As IEnumerable(Of IElement)
```

C++

```
public:  
virtual IEnumerable<IElement^>^ Query(  
    String^ key,  
    Object^ value  
) sealed
```

F#

```
abstract Query :  
    key : string *  
    value : Object -> IEnumerable<IElement>  
override Query :  
    key : string *  
    value : Object -> IEnumerable<IElement>
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Query(System.String,System.Object)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Query(System.String,System.Object)"]

Return Value

Type: [IEnumerable\(IElement\)](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Query(System.String,System.Object)"]

Implements

[IIndex.Query\(String, Object\)](#)

See Also

IdEdgeIndex.Remove Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Remove(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void Remove(  
    string key,  
    Object value,  
    IElement element  
)
```

VB

```
Public Sub Remove (  
    key As String,  
    value As Object,  
    element As IElement  
)
```

C++

```
public:  
virtual void Remove(  
    String^ key,  
    Object^ value,  
    IElement^ element  
) sealed
```

F#

```
abstract Remove :  
    key : string *  
    value : Object *  
    element : IElement -> unit  
override Remove :  
    key : string *  
    value : Object *  
    element : IElement -> unit
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Remove(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Remove(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

element

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

[Missing <param name="element"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdEdgeIndex.Remove(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

Implements

[IIndex.Remove\(String, Object, IElement\)](#)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public abstract class IdElement : DictionaryElement
```

VB

```
Public MustInherit Class IdElement
    Inherits DictionaryElement
```

C++

```
public ref class IdElement abstract : public DictionaryElement
```

F#

```
[<AbstractClassAttribute>]
type IdElement =
    class
        inherit DictionaryElement
    end
```

The **IdElement** type exposes the following members.

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------|----------------------------------------------------|
|  | Id | (Overrides DictionaryElement.Id .) |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------|-----------------------------------------------------|
|  | Equals | (Overrides Object.Equals(Object) .) |
|  | GetHashCode | (Overrides Object.GetHashCode() .) |

VelocityDB Class Library

| | |
|-------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
|  GetProperty | (Overrides DictionaryElement.GetProperty(String).) |
|  GetPropertyKeys | (Overrides DictionaryElement.GetPropertyKeys().) |
|  Remove | (Overrides DictionaryElement.Remove().) |
|  RemoveProperty | (Overrides DictionaryElement.RemoveProperty(String).) |
|  SetProperty | (Overrides DictionaryElement.SetProperty(String, Object).) |
|  ToString | (Overrides Object.ToString().) |

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override void SetProperty(  
    string key,  
    Object value  
)
```

VB

```
Public Overrides Sub SetProperty (  
    key As String,  
    value As Object  
)
```

C++

```
public:  
virtual void SetProperty(  
    String^ key,  
    Object^ value  
) override
```

F#

```
abstract SetProperty :  
    key : string *  
    value : Object -> unit  
override SetProperty :  
    key : string *

IdGraph Class

A Graph implementation which wraps another Graph implementation, enabling custom element IDs even for those graphs which don't otherwise support them. The base Graph must be an instance of `IKeyIndexableGraph`. It *may* be an instance of `IIndexableGraph`, in which case its indices will be wrapped appropriately. It *may* be an instance of `ITransactionalGraph`, in which case transaction operations will be passed through. For those graphs which support vertex indices but not edge indices (or vice versa), you may configure `idInnerTinkerGraph` to use custom IDs only for vertices or only for edges.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdGraph

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class IdGraph : IKeyIndexableGraph, IGraph,
    IWrapperGraph, IIndexableGraph, ITransactionalGraph
```

VB

```
Public Class IdGraph
    Implements IKeyIndexableGraph, IGraph, IWrapperGraph, IIndexableGraph,
    ITransactionalGraph
```

C++

```
public ref class IdGraph : IKeyIndexableGraph,
    IGraph, IWrapperGraph, IIndexableGraph, ITransactionalGraph
```

F#

```
type IdGraph =
    class
        interface IKeyIndexableGraph
        interface IGraph
        interface IWrapperGraph
        interface IIndexableGraph
        interface ITransactionalGraph
    end
```

The **IdGraph** type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
|  | IdGraph(IKeyIndexableGraph) | Adds custom ID functionality to the given graph, supporting both custom vertex IDs and custom edge IDs. |
|  | IdGraph(IKeyIndexableGraph, Boolean, Boolean) | Adds custom ID functionality to the given graph, supporting either custom vertex IDs, custom edge IDs, or both. |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------|-----------------------------------------------------------------------------------------|
|  | EdgeIdFactory | When edges are created using null IDs, the actual IDs are chosen based on this factory. |
|  | Features | |
|  | VertexIdFactory | When edges are created using null IDs, the actual IDs are chosen based on this factory. |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------------|-------------|
|  | AddEdge | |
|  | AddVertex | |
|  | Commit | |
|  | CreateIndex | |
|  | CreateKeyIndex | |
|  | DropIndex | |
|  | DropKeyIndex | |
|  | EnforceUniques | |
|  | GetBaseGraph | |
|  | GetEdge | |
|  | GetEdges() | |
|  | GetEdges(String, Object) | |
|  | GetIndex | |
|  | GetIndexedKeys | |
|  | GetIndices | |
|  | GetSupportEdgeIds | |
|  | GetSupportVertexIds | |
|  | GetVertex | |
|  | GetVertices() | |

| | |
|-------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------|
|  GetVertices(String, Object) | |
|  Query | |
|  RemoveEdge | |
|  RemoveVertex | |
|  Rollback | |
|  Shutdown | |
|  ToString | (Overrides Object.ToString() .) |

Fields

| | Name | Description |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-------------|
|   | Id | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|   | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|   | AddUniqueVertex | Add a vertex to a graph only if no other vertex in the provided Index is indexed by the property key/value pair. If a vertex already exists with that key/value pair, return the pre-existing vertex. (Defined by IndexableGraphHelpers .) |
|   | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|   | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|   | CreateTinkerGraph | (Defined by GraphHelpers .) |
|   | GraphString | (Defined by StringFactory .) |
|   | LoadGml | (Defined by GraphHelpers .) |
|   | LoadGraphml | (Defined by GraphHelpers .) |
|   | LoadGraphson | (Defined by GraphHelpers .) |
|   | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers .) |
|   | SaveDotNet | (Defined by GraphHelpers .) |

VelocityDB Class Library

| | |
|----------------------------------------------------------------------------------------------------------------|---------------------------------------------|
|  SaveGml | (Defined by GraphHelpers.) |
|  SaveGraphml | (Defined by GraphHelpers.) |
|  SaveGraphson | (Defined by GraphHelpers.) |

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id Namespace](#)

IdGraph Constructor (IKeyIndexableGraph)

Adds custom ID functionality to the given graph, supporting both custom vertex IDs and custom edge IDs.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IdGraph(  
    IKeyIndexableGraph baseGraph  
)
```

VB

```
Public Sub New (  
    baseGraph As IKeyIndexableGraph  
)
```

C++

```
public:  
IdGraph(  
    IKeyIndexableGraph^ baseGraph  
)
```

F#

```
new :  
    baseGraph : IKeyIndexableGraph -> IdGraph
```

Parameters

baseGraph

Type: [VelocityGraph.Frontenac.Blueprints.IKeyIndexableGraph](#)

the base graph which does not necessarily support custom IDs

See Also

[IdGraph Class](#)

[IdGraph Overload](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id Namespace](#)

IdGraph Constructor (IKeyIndexableGraph, Boolean, Boolean)

Adds custom ID functionality to the given graph, supporting either custom vertex IDs, custom edge IDs, or both.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IdGraph(  
    IKeyIndexableGraph baseGraph,  
    bool supportVertexIds,  
    bool supportEdgeIds  
)
```

VB

```
Public Sub New (  
    baseGraph As IKeyIndexableGraph,  
    supportVertexIds As Boolean,  
    supportEdgeIds As Boolean  
)
```

C++

```
public:  
IdGraph(  
    IKeyIndexableGraph^ baseGraph,  
    bool supportVertexIds,  
    bool supportEdgeIds  
)
```

F#

```
new :  
    baseGraph : IKeyIndexableGraph *  
    supportVertexIds : bool *  
    supportEdgeIds : bool -> IdGraph
```

Parameters

baseGraph

Type: [VelocityGraph.Frontenac.Blueprints.IKeyIndexableGraph](#)
the base graph which does not necessarily support custom IDs

supportVertexIds

Type: [System.Boolean](#)

whether to support custom vertex IDs

supportEdgeIds

Type: [System.Boolean](#)

whether to support custom edge IDs

When edges are created using null IDs, the actual IDs are chosen based on this factory.

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IdGraph.IIdFactory EdgeIdFactory { get; set; }
```

VB

```
Public Property EdgeIdFactory As IdGraph.IIdFactory  
    Get  
    Set
```

C++

```
public:  
property IdGraph.IIdFactory^ EdgeIdFactory {  
    IdGraph.IIdFactory^ get ();  
    void set (IdGraph.IIdFactory^ value);  
}
```

F#

```
member EdgeIdFactory : IdGraph.IIdFactory with get, set
```

Property Value

Type: [IdGraph.IIdFactory](#)

the factory for new edge IDs.

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdGraph.ToString"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override string ToString()
```

VB

```
Public Overrides Function ToString As String
```

C++

```
public:  
virtual String^ ToString() override
```

F#

```
abstract ToString : unit -> string  
override ToString : unit -> string
```

Return Value

Type: [String](#)

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdGraph.ToString"]

IdGraph.IIdFactory Interface

A factory for IDs of newly-created vertices and edges (where an ID is not otherwise specified).

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public interface IIdFactory
```

VB

```
Public Interface IIdFactory
```

C++

```
public interface class IIdFactory
```

F#

```
type IIdFactory = interface end
```

The IdGraph.IIdFactory type exposes the following members.

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------|-------------|
|  | Createld | |

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class IdVertex : IdElement, IVertex,
    IElement, IDictionary<string, Object>, ICollection<KeyValuePair<string,
Object>>,
    IEnumerable<KeyValuePair<string, Object>>, IEnumerable,
    IDictionary, ICollection
```

VB

```
Public Class IdVertex
    Inherits IdElement
    Implements IVertex, IElement, IDictionary(Of String, Object),
    ICollection(Of KeyValuePair(Of String, Object)), IEnumerable(Of
KeyValuePair(Of String, Object)),
    IEnumerable, IDictionary, ICollection
```

C++

```
public ref class IdVertex : public IdElement,
    IVertex, IElement, IDictionary<String^, Object^>,
    ICollection<KeyValuePair<String^, Object^>>,
    IEnumerable<KeyValuePair<String^, Object^>>,
    IEnumerable, IDictionary, ICollection
```

F#

```
type IdVertex =
    class
        inherit IdElement
        interface IVertex
        interface IElement
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
        interface IDictionary
```

```

interface ICollection
end

```

The **IdVertex** type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------|---------------------------------------------------------|
|  | IdVertex | Initializes a new instance of the IdVertex class |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------|----------------------------------------------------|
|  | AddEdge | |
|  | GetBaseVertex | |
|  | GetEdges | |
|  | GetVertices | |
|  | Query | |
|  | ToString | (Overrides IdElement.ToString() .) |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers .) |
|  | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers .) |
|  | GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers .) |
|  | HaveEqualEdges | Test whether the two vertices have equal edge sets (Defined by VertexHelpers .) |
|  | HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers .) |
|  | HaveEqualNeighborhood | Test whether the two vertices have equal properties and edge sets. (Defined by VertexHelpers .) |
|  | HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers .) |

| | | |
|-----------------------------------------------------------------------------------|------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers .) |
|  | SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers .) |
|  | ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws ArgumentException whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers .) |
|  | VertexString | (Defined by StringFactory .) |

IdVertexIndex.Count Method

[Missing <summary> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Count(System.String,System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public long Count(  
    string key,  
    Object value  
)
```

VB

```
Public Function Count (  
    key As String,  
    value As Object  
) As Long
```

C++

```
public:  
virtual long long Count(  
    String^ key,  
    Object^ value  
) sealed
```

F#

```
abstract Count :  
    key : string *  
    value : Object -> int64  
override Count :  
    key : string *  
    value : Object -> int64
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Count(System.String,System.Object)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Count(System.String,System.Object)"]

Return Value

Type: [Int64](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Count(System.String,System.Object)"]

Implements

[IIndex.Count\(String, Object\)](#)

See Also

[IdVertexIndex Class](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id Namespace](#)

IdVertexIndex.Get Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Get(System.String,System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IElement> Get (
    string key,
    Object value
)
```

VB

```
Public Function Get (
    key As String,
    value As Object
) As IEnumerable(Of IElement)
```

C++

```
public:
virtual IEnumerable<IElement^>^ Get (
    String^ key,
    Object^ value
) sealed
```

F#

```
abstract Get :
    key : string *
    value : Object -> IEnumerable<IElement>
override Get :
    key : string *
    value : Object -> IEnumerable<IElement>
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Get(System.String,System.Object)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Get(System.String,System.Object)"]

Return Value

Type: [IEnumerable\(IElement\)](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Get(System.String,System.Object)"]

Implements

[IIndex.Get\(String, Object\)](#)

See Also

[IdVertexIndex Class](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id Namespace](#)

IdVertexIndex.Put Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void Put (  
    string key,  
    Object value,  
    IElement element  
)
```

VB

```
Public Sub Put (  
    key As String,  
    value As Object,  
    element As IElement  
)
```

C++

```
public:  
virtual void Put(  
    String^ key,  
    Object^ value,  
    IElement^ element  
) sealed
```

F#

```
abstract Put :  
    key : string *  
    value : Object *  
    element : IElement -> unit  
override Put :  
    key : string *  
    value : Object *  
    element : IElement -> unit
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

element

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

[Missing <param name="element"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

Implements

[IIndex.Put\(String, Object, IElement\)](#)

See Also

[IdVertexIndex Class](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id Namespace](#)

IdVertexIndex.Query Method

[Missing <summary> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Query(System.String,System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IElement> Query(  
    string key,  
    Object value  
)
```

VB

```
Public Function Query (  
    key As String,  
    value As Object  
) As IEnumerable(Of IElement)
```

C++

```
public:  
virtual IEnumerable<IElement^>^ Query(  
    String^ key,  
    Object^ value  
) sealed
```

F#

```
abstract Query :  
    key : string *  
    value : Object -> IEnumerable<IElement>  
override Query :  
    key : string *  
    value : Object -> IEnumerable<IElement>
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Query(System.String,System.Object)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Query(System.String,System.Object)"]

Return Value

Type: [IEnumerable\(IElement\)](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Query(System.String,System.Object)"]

Implements

[IIndex.Query\(String, Object\)](#)

See Also

[IdVertexIndex Class](#)

IdVertexIndex.Remove Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Remove(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void Remove(  
    string key,  
    Object value,  
    IElement element  
)
```

VB

```
Public Sub Remove (  
    key As String,  
    value As Object,  
    element As IElement  
)
```

C++

```
public:  
virtual void Remove(  
    String^ key,  
    Object^ value,  
    IElement^ element  
) sealed
```

F#

```
abstract Remove :  
    key : string *  
    value : Object *  
    element : IElement -> unit  
override Remove :  
    key : string *  
    value : Object *  
    element : IElement -> unit
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Remove(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Remove(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

element

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

[Missing <param name="element"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.Remove(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

Implements

[IIndex.Remove\(String, Object, IElement\)](#)

See Also

[IdVertexIndex Class](#)

IdVertexIndex.ToString Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.ToString"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override string ToString()
```

VB

```
Public Overrides Function ToString As String
```

C++

```
public:  
virtual String^ ToString() override
```

F#

```
abstract ToString : unit -> string  
override ToString : unit -> string
```

Return Value

Type: [String](#)

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Id.IdVertexIndex.ToString"]

See Also

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionEdge

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class PartitionEdge : PartitionElement,
    IEdge, IElement, IDictionary<string, Object>,
    ICollection<KeyValuePair<string, Object>>,
    IEnumerable<KeyValuePair<string, Object>>,
    IEnumerable, IDictionary, ICollection
```

VB

```
Public Class PartitionEdge
    Inherits PartitionElement
    Implements IEdge, IElement, IDictionary(Of String, Object),
    ICollection(Of KeyValuePair(Of String, Object)), IEnumerable(Of
    KeyValuePair(Of String, Object)),
    IEnumerable, IDictionary, ICollection
```

C++

```
public ref class PartitionEdge : public PartitionElement,
    IEdge, IElement, IDictionary<String^, Object^>,
    ICollection<KeyValuePair<String^, Object^>>,
    IEnumerable<KeyValuePair<String^, Object^>>,
    IEnumerable, IDictionary, ICollection
```

F#

```
type PartitionEdge =
    class
        inherit PartitionElement
        interface IEdge
        interface IElement
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
        interface IDictionary
```

```

interface ICollection
end

```

The **PartitionEdge** type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------|--------------------------------------------------------------|
|  | PartitionEdge | Initializes a new instance of the PartitionEdge class |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------|-------------|
|  | Label | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|-------------|
|  | GetBaseEdge | |
|  | GetVertex | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers.) |
|  | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers.) |
|  | EdgeString | (Defined by StringFactory.) |
|  | GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers.) |
|  | HaveEqualIds | Simply tests if the element ids are <code>equal()</code> . (Defined by ElementHelpers.) |
|  | HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be <code>equals()</code> . (Defined by ElementHelpers.) |
|  | RelabelEdge | An edge is relabeled by creating a new edge with the same properties, but new label. Note that an edge is deleted and an edge is added. (Defined by EdgeHelpers.) |

| | |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers .) |
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers .) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws ArgumentException whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers .) |

PartitionEdge Constructor

Initializes a new instance of the [PartitionEdge](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public PartitionEdge(  
    IEdge edge,  
    PartitionGraph innerTinkerGraph  
)
```

VB

```
Public Sub New (  
    edge As IEdge,  
    innerTinkerGraph As PartitionGraph  
)
```

C++

```
public:  
PartitionEdge(  
    IEdge^ edge,  
    PartitionGraph^ innerTinkerGraph  
)
```

F#

```
new :  
    edge : IEdge *  
    innerTinkerGraph : PartitionGraph -> PartitionEdge
```

Parameters

edge

Type: [VelocityGraph.Frontenac.Blueprints.IEdge](#)

[Missing <param name="edge"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionEdge.#ctor(VelocityGraph.Frontenac.Blueprints.IEdge,VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionGraph)"

innerTinkerGraph

Type: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionGraph](#)

[Missing <param name="innerTinkerGraph"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionEdge.#ctor(VelocityGraph.Frontenac.Blueprints.IEdge,VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionGraph)"

PartitionEdge.Label Property

[Missing <summary> documentation for "P:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionEdge.Label"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public string Label { get; }
```

VB

```
Public ReadOnly Property Label As String  
    Get
```

C++

```
public:  
virtual property String^ Label {  
    String^ get () sealed;  
}
```

F#

```
abstract Label : string with get  
override Label : string with get
```

Property Value

Type: [String](#)

Implements

[IEdge.Label](#)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public abstract class PartitionElement : DictionaryElement
```

VB

```
Public MustInherit Class PartitionElement
    Inherits DictionaryElement
```

C++

```
public ref class PartitionElement abstract : public DictionaryElement
```

F#

```
[<AbstractClassAttribute>]
type PartitionElement =
    class
        inherit DictionaryElement
    end
```

The **PartitionElement** type exposes the following members.

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------|----------------------------------------------------|
|  | Id | (Overrides DictionaryElement.Id.) |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------|-----------------------------------------------------|
|  | Equals | (Overrides Object.Equals(Object).) |
|  | GetBaseElement | |

VelocityDB Class Library

| | |
|-------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
|  GetHashCode | (Overrides Object.GetHashCode().) |
|  GetPartition | |
|  GetProperty | (Overrides DictionaryElement.GetProperty(String).) |
|  GetPropertyKeys | (Overrides DictionaryElement.GetPropertyKeys().) |
|  Remove | (Overrides DictionaryElement.Remove().) |
|  RemoveProperty | (Overrides DictionaryElement.RemoveProperty(String).) |
|  SetPartition | |
|  SetProperty | (Overrides DictionaryElement.SetProperty(String, Object).) |
|  ToString | (Overrides Object.ToString().) |

PartitionElement.Equals Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionElement.Equals(System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override bool Equals(  
    Object obj  
)
```

VB

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

C++

```
public:  
virtual bool Equals(  
    Object^ obj  
) override
```

F#

```
abstract Equals :  
    obj : Object -> bool  
override Equals :  
    obj : Object -> bool
```

Parameters

obj

Type: [System.Object](#)

[Missing <param name="obj"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionElement.Equals(System.Object)"]

Return Value

Type: [Boolean](#)

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionElement.Equals(System.Object)"]

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionGraph

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionIndexableGraph](#)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class PartitionGraph : IGraph,
    IWrapperGraph
```

VB

```
Public Class PartitionGraph
    Implements IGraph, IWrapperGraph
```

C++

```
public ref class PartitionGraph : IGraph,
    IWrapperGraph
```

F#

```
type PartitionGraph =
    class
        interface IGraph
        interface IWrapperGraph
    end
```

The **PartitionGraph** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|---------------------------------------------------------------|
|  | PartitionGraph(IGraph, String, String) | Initializes a new instance of the PartitionGraph class |
|  | PartitionGraph(IGraph, String, String, IEnumerable(String)) | Initializes a new instance of the PartitionGraph class |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------------|-------------|
|  | Features | |
|  | PartitionKey | |
|  | WritePartition | |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------------|-------------------------------------------------|
|  | AddEdge | |
|  | AddReadPartition | |
|  | AddVertex | |
|  | GetBaseGraph | |
|  | GetEdge | |
|  | GetEdges() | |
|  | GetEdges(String, Object) | |
|  | GetReadPartitions | |
|  | GetVertex | |
|  | GetVertices() | |
|  | GetVertices(String, Object) | |
|  | IsInPartition | |
|  | Query | |
|  | RemoveEdge | |
|  | RemoveReadPartition | |
|  | RemoveVertex | |
|  | Shutdown | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This |

| | | |
|------------------------------------------------------------------------------------|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | method only works for graphs where the user can control the element ids. (Defined by GraphHelpers.) |
|  | CreateTinkerGraph | (Defined by GraphHelpers.) |
|  | GraphString | (Defined by StringFactory.) |
|  | LoadGml | (Defined by GraphHelpers.) |
|  | LoadGraphml | (Defined by GraphHelpers.) |
|  | LoadGraphson | (Defined by GraphHelpers.) |
|  | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |
|  | SaveDotNet | (Defined by GraphHelpers.) |
|  | SaveGml | (Defined by GraphHelpers.) |
|  | SaveGraphml | (Defined by GraphHelpers.) |
|  | SaveGraphson | (Defined by GraphHelpers.) |

    IVertex inVertex,
    string label
)
```

VB

```
Public Function AddEdge (
    id As Object,
    outVertex As IVertex,
    inVertex As IVertex,
    label As String
) As IEdge
```

C++

```
public:
virtual IEdge^ AddEdge (
    Object^ id,
    IVertex^ outVertex,
    IVertex^ inVertex,
    String^ label
) sealed
```

F#

```
abstract AddEdge :
    id : Object *
    outVertex : IVertex *
    inVertex : IVertex *
    label : string -> IEdge
override AddEdge :
    id : Object *
    outVertex : IVertex *
    inVertex : IVertex *
    label : string -> IEdge
```

Parameters

id

Type: [System.Object](#)

[Missing <param name="id"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

outVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="outVertex"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

inVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="inVertex"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

label

Type: [System.String](#)

[Missing <param name="label"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Return Value

Type: [IEdge](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Implements

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionIndex

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

```
C#
public class PartitionIndex : IIndex
```

```
VB
Public Class PartitionIndex
    Implements IIndex
```

```
C++
public ref class PartitionIndex : IIndex
```

```
F#
type PartitionIndex =
    class
        interface IIndex
    end
```

The **PartitionIndex** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------------|---------------------------------------------------------------|
|  | PartitionIndex | Initializes a new instance of the PartitionIndex class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------|-------------|
|  | Name | |
|  | Type | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------|-------------------------------------------------|
|  | Count | |
|  | Get | |
|  | Put | |
|  | Query | |
|  | Remove | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|----------------------------------------------|
|  | IndexString | (Defined by StringFactory .) |

PartitionIndex.Count Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionIndex.Count(System.String, System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public long Count(  
    string key,  
    Object value  
)
```

VB

```
Public Function Count (  
    key As String,  
    value As Object  
) As Long
```

C++

```
public:  
virtual long long Count(  
    String^ key,  
    Object^ value  
) sealed
```

F#

```
abstract Count :  
    key : string *  
    value : Object -> int64  
override Count :  
    key : string *  
    value : Object -> int64
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionIndex.Count(System.String, System.Object)"]

value

Type: [System.Object](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionGraph](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition.PartitionIndexableGraph

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Partition](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class PartitionIndexableGraph : PartitionGraph,
    IIndexableGraph, IGraph
```

VB

```
Public Class PartitionIndexableGraph
    Inherits PartitionGraph
    Implements IIndexableGraph, IGraph
```

C++

```
public ref class PartitionIndexableGraph : public PartitionGraph,
    IIndexableGraph, IGraph
```

F#

```
type PartitionIndexableGraph =
    class
        inherit PartitionGraph
        interface IIndexableGraph
        interface IGraph
    end
```

The **PartitionIndexableGraph** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
|  | PartitionIndexableGraph(IIndexableGraph, String, String) | Initializes a new instance of the PartitionIndexableGraph class |
|  | PartitionIndexableGraph(IIndexableGraph, String, String, IEnumerable(String)) | Initializes a new instance of the PartitionIndexableGraph class |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|-------------|
|  | CreateIndex | |
|  | DropIndex | |
|  | GetIndex | |
|  | GetIndices | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddUniqueVertex | Add a vertex to a graph only if no other vertex in the provided Index is indexed by the property key/value pair. If a vertex already exists with that key/value pair, return the pre-existing vertex. (Defined by IndexableGraphHelpers .) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  | CreateTinkerGraph | (Defined by GraphHelpers .) |
|  | GraphString | (Defined by StringFactory .) |
|  | LoadGml | (Defined by GraphHelpers .) |
|  | LoadGraphml | (Defined by GraphHelpers .) |
|  | LoadGraphson | (Defined by GraphHelpers .) |
|  | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers .) |
|  | SaveDotNet | (Defined by GraphHelpers .) |
|  | SaveGml | (Defined by GraphHelpers .) |
|  | SaveGraphml | (Defined by GraphHelpers .) |
|  | SaveGraphson | (Defined by GraphHelpers .) |

```

```

interface ICollection
end

```

The **PartitionVertex** type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------|----------------------------------------------------------------|
|  | PartitionVertex | Initializes a new instance of the PartitionVertex class |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------|-------------|
|  | Vertex | |

Methods

| | Name | Description |
|------------------------------------------------------------------------------------|-----------------------------|-------------|
|  | AddEdge | |
|  | GetEdges | |
|  | GetVertices | |
|  | Query | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers .) |
|  | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers .) |
|  | GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers .) |
|  | HaveEqualEdges | Test whether the two vertices have equal edge sets (Defined by VertexHelpers .) |
|  | HaveEqualIds | Simply tests if the element ids are <code>equal()</code> . (Defined by ElementHelpers .) |
|  | HaveEqualNeighborhood | Test whether the two vertices have equal properties and edge sets. (Defined by VertexHelpers .) |

| | |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers.) |
|  SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers.) |
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers.) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws ArgumentException whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers.) |
|  VertexString | (Defined by StringFactory.) |

[Missing <summary> documentation for

"P:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyEdge.Label"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public string Label { get; }
```

VB

```
Public ReadOnly Property Label As String  
    Get
```

C++

```
public:  
virtual property String^ Label {  
    String^ get () sealed;  
}
```

F#

```
abstract Label : string with get  
override Label : string with get
```

Property Value

Type: [String](#)

Implements

[IEdge.Label](#)

ReadOnlyEdge.ReadOnlyEdge Methods

The [ReadOnlyEdge](#) type exposes the following members.

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|-------------|
|  | GetBaseEdge | |
|  | GetVertex | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers .) |
|  | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers .) |
|  | EdgeString | (Defined by StringFactory .) |
|  | GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers .) |
|  | HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers .) |
|  | HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers .) |
|  | RelabelEdge | An edge is relabeled by creating a new edge with the same properties, but new label. Note that an edge is deleted and an edge is added. (Defined by EdgeHelpers .) |
|  | SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers .) |
|  | SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers .) |
|  | ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws <code>ArgumentException</code> whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers .) |

ReadOnlyGraph Class

A ReadOnlyInnerTinkerGraph wraps a Graph and overrides the underlying Graph's mutating methods. In this way, a ReadOnlyInnerTinkerGraph can only be read from, not written to.

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyGraph
[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndexableGraph](#)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

```
C#
public class ReadOnlyGraph : IGraph,
    IWrapperGraph
```

```
VB
Public Class ReadOnlyGraph
    Implements IGraph, IWrapperGraph
```

```
C++
public ref class ReadOnlyGraph : IGraph,
    IWrapperGraph
```

```
F#
type ReadOnlyGraph =
    class
        interface IGraph
        interface IWrapperGraph
    end
```

The **ReadOnlyGraph** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------|--------------------------------------------------------------|
|  | ReadOnlyGraph | Initializes a new instance of the ReadOnlyGraph class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------|-------------|
|  | Features | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------------------|-------------------------------------------------|
|  | AddEdge | |
|  | AddVertex | |
|  | GetBaseGraph | |
|  | GetEdge | |
|  | GetEdges() | |
|  | GetEdges(String, Object) | |
|  | GetVertex | |
|  | GetVertices() | |
|  | GetVertices(String, Object) | |
|  | Query | |
|  | RemoveEdge | |
|  | RemoveVertex | |
|  | Shutdown | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  | CreateTinkerGraph | (Defined by GraphHelpers .) |
|  | GraphString | (Defined by StringFactory .) |
|  | LoadGml | (Defined by GraphHelpers .) |
|  | LoadGraphml | (Defined by GraphHelpers .) |
|  | LoadGraphson | (Defined by GraphHelpers .) |
|  | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 |

VelocityDB Class Library

| | | |
|-----------------------------------------------------------------------------------|------------------------------|--------------------------------------------------------------------------------------------------|
| | | mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |
|  | SaveDotNet | (Defined by GraphHelpers.) |
|  | SaveGml | (Defined by GraphHelpers.) |
|  | SaveGraphml | (Defined by GraphHelpers.) |
|  | SaveGraphson | (Defined by GraphHelpers.) |

|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  | CreateTinkerGraph | (Defined by GraphHelpers .) |
|  | GraphString | (Defined by StringFactory .) |
|  | LoadGml | (Defined by GraphHelpers .) |
|  | LoadGraphml | (Defined by GraphHelpers .) |
|  | LoadGraphson | (Defined by GraphHelpers .) |
|  | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that |

| | | |
|-----------------------------------------------------------------------------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |
|  | SaveDotNet | (Defined by GraphHelpers.) |
|  | SaveGml | (Defined by GraphHelpers.) |
|  | SaveGraphml | (Defined by GraphHelpers.) |
|  | SaveGraphson | (Defined by GraphHelpers.) |

ReadOnlyGraph.AddEdge Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEdge AddEdge (
    Object id,
    IVertex outVertex,
    IVertex inVertex,
    string label
)
```

VB

```
Public Function AddEdge (
    id As Object,
    outVertex As IVertex,
    inVertex As IVertex,
    label As String
) As IEdge
```

C++

```
public:
virtual IEdge^ AddEdge (
    Object^ id,
    IVertex^ outVertex,
    IVertex^ inVertex,
    String^ label
) sealed
```

F#

```
abstract AddEdge :
    id : Object *
    outVertex : IVertex *
    inVertex : IVertex *
    label : string -> IEdge
override AddEdge :
    id : Object *
    outVertex : IVertex *
    inVertex : IVertex *
    label : string -> IEdge
```

Parameters

id

Type: [System.Object](#)

[Missing <param name="id"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

outVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="outVertex"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

inVertex

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class ReadOnlyIndex : IIndex
```

VB

```
Public Class ReadOnlyIndex
    Implements IIndex
```

C++

```
public ref class ReadOnlyIndex : IIndex
```

F#

```
type ReadOnlyIndex =
    class
        interface IIndex
    end
```

The **ReadOnlyIndex** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------|--------------------------------------------------------------|
|  | ReadOnlyIndex | Initializes a new instance of the ReadOnlyIndex class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------|-------------|
|  | Name | |
|  | Type | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------|-------------------------------------------------|
|  | Count | |
|  | Get | |
|  | Put | |
|  | Query | |
|  | Remove | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|----------------------------------------------|
|  | IndexString | (Defined by StringFactory .) |

The [ReadOnlyIndex](#) type exposes the following members.

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------|-------------------------------------------------|
|  | Count | |
|  | Get | |
|  | Put | |
|  | Query | |
|  | Remove | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|----------------------------------------------|
|  | IndexString | (Defined by StringFactory .) |

ReadOnlyIndex.Count Method

[Missing <summary> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex.Count(System.String, System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public long Count(  
    string key,  
    Object value  
)
```

VB

```
Public Function Count (  
    key As String,  
    value As Object  
) As Long
```

C++

```
public:  
virtual long long Count(  
    String^ key,  
    Object^ value  
) sealed
```

F#

```
abstract Count :  
    key : string *  
    value : Object -> int64  
override Count :  
    key : string *  
    value : Object -> int64
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex.Count(System.String, System.Object)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex.Count(System.String, System.Object)"]

Return Value

Type: [Int64](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex.Count(System.String, System.Object)"]

Implements

[IIndex.Count\(String, Object\)](#)

ReadOnlyIndex.Get Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex.Get(System.String,System.Object)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IElement> Get (
    string key,
    Object value
)
```

VB

```
Public Function Get (
    key As String,
    value As Object
) As IEnumerable(Of IElement)
```

C++

```
public:
virtual IEnumerable<IElement^>^ Get (
    String^ key,
    Object^ value
) sealed
```

F#

```
abstract Get :
    key : string *
    value : Object -> IEnumerable<IElement>
override Get :
    key : string *
    value : Object -> IEnumerable<IElement>
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex.Get(System.String,System.Object)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex.Get(System.String,System.Object)"]

Return Value

Type: [IEnumerable\(IElement\)](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex.Get(System.String,System.Object)"]

Implements

ReadOnlyIndex.Put Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void Put (  
    string key,  
    Object value,  
    IElement element  
)
```

VB

```
Public Sub Put (  
    key As String,  
    value As Object,  
    element As IElement  
)
```

C++

```
public:  
virtual void Put(  
    String^ key,  
    Object^ value,  
    IElement^ element  
) sealed
```

F#

```
abstract Put :  
    key : string *  
    value : Object *  
    element : IElement -> unit  
override Put :  
    key : string *  
    value : Object *  
    element : IElement -> unit
```

Parameters

key

Type: [System.String](#)

[Missing <param name="key"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex.Put(System.String,System.Object,VelocityGraph.Frontenac.Blueprints.IElement)"]

value

Type: [System.Object](#)

[Missing <param name="value"/> documentation for
"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex.Put(System.String, System.Object, VelocityGraph.Frontenac.Blueprints.IElement)"]

element

Type: [VelocityGraph.Frontenac.Blueprints.IElement](#)

[Missing <param name="element"/> documentation for
"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndex.Put(System.String, System.Object, VelocityGraph.Frontenac.Blueprints.IElement)"]

Implements

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyKeyIndexableGraph](#)

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class ReadOnlyIndexableGraph : ReadOnlyGraph,
    IIndexableGraph, IGraph
```

VB

```
Public Class ReadOnlyIndexableGraph
    Inherits ReadOnlyGraph
    Implements IIndexableGraph, IGraph
```

C++

```
public ref class ReadOnlyIndexableGraph : public ReadOnlyGraph,
    IIndexableGraph, IGraph
```

F#

```
type ReadOnlyIndexableGraph =
    class
        inherit ReadOnlyGraph
        interface IIndexableGraph
        interface IGraph
    end
```

The **ReadOnlyIndexableGraph** type exposes the following members.

Constructors

| Name | Description |
|----------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
|  ReadOnlyIndexableGraph | Initializes a new instance of the ReadOnlyIndexableGraph class |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|-------------|
|  | CreateIndex | |
|  | DropIndex | |
|  | GetIndex | |
|  | GetIndices | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddUniqueVertex | Add a vertex to a graph only if no other vertex in the provided Index is indexed by the property key/value pair. If a vertex already exists with that key/value pair, return the pre-existing vertex. (Defined by IndexableGraphHelpers .) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  | CreateTinkerGraph | (Defined by GraphHelpers .) |
|  | GraphString | (Defined by StringFactory .) |
|  | LoadGml | (Defined by GraphHelpers .) |
|  | LoadGraphml | (Defined by GraphHelpers .) |
|  | LoadGraphson | (Defined by GraphHelpers .) |
|  | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers .) |
|  | SaveDotNet | (Defined by GraphHelpers .) |
|  | SaveGml | (Defined by GraphHelpers .) |
|  | SaveGraphml | (Defined by GraphHelpers .) |
|  | SaveGraphson | (Defined by GraphHelpers .) |

ReadOnlyKeyIndexableGraph Class

A ReadOnlyKeyIndexableGraph wraps a KeyIndexableGraph and overrides the underlying graph's mutating methods. In this way, a ReadOnlyKeyIndexableGraph can only be read from, not written to.

Inheritance Hierarchy

[System.Object](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyGraph](#)

[VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyIndexableGraph](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyKeyIndexableGraph

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class ReadOnlyKeyIndexableGraph : ReadOnlyIndexableGraph,
    IKeyIndexableGraph, IGraph
```

VB

```
Public Class ReadOnlyKeyIndexableGraph
    Inherits ReadOnlyIndexableGraph
    Implements IKeyIndexableGraph, IGraph
```

C++

```
public ref class ReadOnlyKeyIndexableGraph : public ReadOnlyIndexableGraph,
    IKeyIndexableGraph, IGraph
```

F#

```
type ReadOnlyKeyIndexableGraph =
    class
        inherit ReadOnlyIndexableGraph
        interface IKeyIndexableGraph
        interface IGraph
    end
```

The **ReadOnlyKeyIndexableGraph** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------------|--------------------------------------------------------------------------|
|  | ReadOnlyKeyIndexableGraph | Initializes a new instance of the ReadOnlyKeyIndexableGraph class |

Methods

| | Name | Description |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  | CreateTinkerGraph | (Defined by GraphHelpers .) |
|  | GraphString | (Defined by StringFactory .) |
|  | LoadGml | (Defined by GraphHelpers .) |
|  | LoadGraphml | (Defined by GraphHelpers .) |
|  | LoadGraphson | (Defined by GraphHelpers .) |
|  | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers .) |
|  | SaveDotNet | (Defined by GraphHelpers .) |
|  | SaveGml | (Defined by GraphHelpers .) |
|  | SaveGraphml | (Defined by GraphHelpers .) |
|  | SaveGraphson | (Defined by GraphHelpers .) |

ReadOnlyKeyIndexableGraph Constructor

Initializes a new instance of the [ReadOnlyKeyIndexableGraph](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public ReadOnlyKeyIndexableGraph(  
    IKeyIndexableGraph baseGraph  
)
```

VB

```
Public Sub New (  
    baseGraph As IKeyIndexableGraph  
)
```

C++

```
public:  
ReadOnlyKeyIndexableGraph(  
    IKeyIndexableGraph^ baseGraph  
)
```

F#

```
new :  
    baseGraph : IKeyIndexableGraph -> ReadOnlyKeyIndexableGraph
```

Parameters

baseGraph

Type: [VelocityGraph.Frontenac.Blueprints.IKeyIndexableGraph](#)

[Missing <param name="baseGraph"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyKeyIndexableGraph.#ctor(VelocityGraph.Frontenac.Blueprints.IKeyIndexableGraph)"]

ReadOnlyKeyIndexableGraph.CreateKeyIndex Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly.ReadOnlyKeyIndexableGraph.CreateKeyIndex(System.String,System.Type,VelocityGraph.Frontenac.Blueprints.Parameter[])"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.ReadOnly](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public void CreateKeyIndex(  
    string key,  
    Type elementClass,  
    params Parameter[] indexParameters  
)
```

VB

```
Public Sub CreateKeyIndex (  
    key As String,  
    elementClass As Type,  
    ParamArray indexParameters As Parameter()  
)
```

C++

```
public:  
virtual void CreateKeyIndex(  
    String^ key,  
    Type^ elementClass,  
    ... array<Parameter^>^ indexParameters  
) sealed
```

F#

```

    IEnumerable<KeyValuePair<String^, Object^>>,
    IEnumerable, IDictionary, ICollection
```

F#

```
type ReadOnlyVertex =
    class
        inherit ReadOnlyElement
        interface IVertex
        interface IElement
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
        interface IDictionary
```

```

interface ICollection
end

```

The **ReadOnlyVertex** type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------------|---------------------------------------------------------------|
|  | ReadOnlyVertex | Initializes a new instance of the ReadOnlyVertex class |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|-------------|
|  | AddEdge | |
|  | GetEdges | |
|  | GetVertices | |
|  | Query | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers.) |
|  | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers.) |
|  | GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers.) |
|  | HaveEqualEdges | Test whether the two vertices have equal edge sets (Defined by VertexHelpers.) |
|  | HaveEqualIds | Simply tests if the element ids are <code>equal()</code> . (Defined by ElementHelpers.) |
|  | HaveEqualNeighborhood | Test whether the two vertices have equal properties and edge sets. (Defined by VertexHelpers.) |
|  | HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be <code>equals()</code> . (Defined by ElementHelpers.) |
|  | SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers.) |

| | |
|---------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers.) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws <code>ArgumentException</code> whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers.) |
|  VertexString | (Defined by StringFactory.) |

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedEdge

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class WrappedEdge : WrappedElement,
    IEdge, IElement, IDictionary<string, Object>,
    ICollection<KeyValuePair<string, Object>>,
    IEnumerable<KeyValuePair<string, Object>>,
    IEnumerable, IDictionary, ICollection
```

VB

```
Public Class WrappedEdge
    Inherits WrappedElement
    Implements IEdge, IElement, IDictionary(Of String, Object),
    ICollection(Of KeyValuePair(Of String, Object)), IEnumerable(Of
KeyValuePair(Of String, Object)),
    IEnumerable, IDictionary, ICollection
```

C++

```
public ref class WrappedEdge : public WrappedElement,
    IEdge, IElement, IDictionary<String^, Object^>,
    ICollection<KeyValuePair<String^, Object^>>,
    IEnumerable<KeyValuePair<String^, Object^>>,
    IEnumerable, IDictionary, ICollection
```

F#

```
type WrappedEdge =
    class
        inherit WrappedElement
        interface IEdge
        interface IElement
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
        interface IDictionary
```

```

interface ICollection
end

```

The **WrappedEdge** type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|------------------------------------------------------------|
|  | WrappedEdge | Initializes a new instance of the WrappedEdge class |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------|-------------|
|  | Edge | |
|  | Label | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------|-------------|
|  | GetVertex | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers.) |
|  | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers.) |
|  | EdgeString | (Defined by StringFactory.) |
|  | GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers.) |
|  | HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers.) |
|  | HaveEqualProperties | Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers.) |
|  | RelabelEdge | An edge is relabeled by creating a new edge with the same properties, but new label. Note that an edge is deleted and an edge is added. (Defined by EdgeHelpers.) |

| | |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  SetProperties(IDictionary(String, Object)) | Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers .) |
|  SetProperties(Object[]) | Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers .) |
|  ValidateProperty | Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws ArgumentException whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers .) |

```
Public Class WrappedGraph
    Implements IGraph, IWrapperGraph
```

C++

```
public ref class WrappedGraph : IGraph,
    IWrapperGraph
```

F#

```
type WrappedGraph =
    class
        interface IGraph
        interface IWrapperGraph
    end
```

The **WrappedGraph** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------|-------------------------------------------------------------|
|  | WrappedGraph | Initializes a new instance of the WrappedGraph class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|--------------------------|-------------|
|  | Features | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|---------------------------------------------|-------------------------------------------------|
|  | AddEdge | |
|  | AddVertex | |
|  | GetBaseGraph | |
|  | GetEdge | |
|  | GetEdges() | |
|  | GetEdges(String, Object) | |
|  | GetVertex | |
|  | GetVertices() | |
|  | GetVertices(String, Object) | |
|  | Query | |
|  | RemoveEdge | |
|  | RemoveVertex | |
|  | Shutdown | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  | CreateTinkerGraph | (Defined by GraphHelpers .) |
|  | GraphString | (Defined by StringFactory .) |
|  | LoadGml | (Defined by GraphHelpers .) |
|  | LoadGraphml | (Defined by GraphHelpers .) |
|  | LoadGraphson | (Defined by GraphHelpers .) |
|  | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 |

VelocityDB Class Library

| | | |
|-----------------------------------------------------------------------------------|------------------------------|--------------------------------------------------------------------------------------------------|
| | | mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers.) |
|  | SaveDotNet | (Defined by GraphHelpers.) |
|  | SaveGml | (Defined by GraphHelpers.) |
|  | SaveGraphml | (Defined by GraphHelpers.) |
|  | SaveGraphson | (Defined by GraphHelpers.) |

WrappedGraph Constructor

Initializes a new instance of the [WrappedGraph](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public WrappedGraph(  
    IGraph baseGraph  
)
```

VB

```
Public Sub New (  
    baseGraph As IGraph  
)
```

C++

```
public:  
WrappedGraph(  
    IGraph^ baseGraph  
)
```

F#

```
new :  
    baseGraph : IGraph -> WrappedGraph
```

Parameters

baseGraph

Type: [VelocityGraph.Frontenac.Blueprints.IGraph](#)

[Missing <param name="baseGraph"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedGraph.#ctor(VelocityGraph.Frontenac.Blueprints.IGraph)"]

WrappedGraph.Features Property

[Missing <summary> documentation for

"P:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedGraph.Features"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public Features Features { get; }
```

VB

```
Public ReadOnly Property Features As Features  
    Get
```

C++

```
public:  
virtual property Features^ Features {  
    Features^ get () sealed;  
}
```

F#

```
abstract Features : Features with get  
override Features : Features with get
```

Property Value

Type: [Features](#)

Implements

WrappedGraph.AddEdge Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEdge AddEdge (
    Object id,
    IVertex outVertex,
    IVertex inVertex,
    string label
)
```

VB

```
Public Function AddEdge (
    id As Object,
    outVertex As IVertex,
    inVertex As IVertex,
    label As String
) As IEdge
```

C++

```
public:
virtual IEdge^ AddEdge (
    Object^ id,
    IVertex^ outVertex,
    IVertex^ inVertex,
    String^ label
) sealed
```

F#

```
abstract AddEdge :
    id : Object *
    outVertex : IVertex *
    inVertex : IVertex *
    label : string -> IEdge
override AddEdge :
    id : Object *
    outVertex : IVertex *
    inVertex : IVertex *
    label : string -> IEdge
```

Parameters

id

Type: [System.Object](#)

[Missing <param name="id"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

outVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="outVertex"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

inVertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)

[Missing <param name="inVertex"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

label

Type: [System.String](#)

[Missing <param name="label"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Return Value

Type: [IEdge](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedGraph.AddEdge(System.Object,VelocityGraph.Frontenac.Blueprints.IVertex,VelocityGraph.Frontenac.Blueprints.IVertex,System.String)"]

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public override string ToString()
```

VB

```
Public Overrides Function ToString As String
```

C++

```
public:  
virtual String^ ToString() override
```

F#

```
abstract ToString : unit -> string  
override ToString : unit -> string
```

Return Value

Type: [String](#)

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedGraph.ToString"]

Inheritance Hierarchy

[System.Object](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedIndex

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class WrappedIndex : IIndex
```

VB

```
Public Class WrappedIndex  
    Implements IIndex
```

C++

```
public ref class WrappedIndex : IIndex
```

F#

```
type WrappedIndex =  
    class  
        interface IIndex  
    end
```

The **WrappedIndex** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------|-------------------------------------------------------------|
|  | WrappedIndex | Initializes a new instance of the WrappedIndex class |

Properties

| | Name | Description |
|-------------------------------------------------------------------------------------|----------------------|-------------|
|  | Name | |
|  | Type | |

Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|--------------------------|-------------------------------------------------|
|  | Count | |
|  | Get | |
|  | Put | |
|  | Query | |
|  | Remove | |
|  | ToString | (Overrides Object.ToString() .) |

Extension Methods

| | Name | Description |
|-----------------------------------------------------------------------------------|-----------------------------|----------------------------------------------|
|  | IndexString | (Defined by StringFactory .) |

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedIndexableGraph

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class WrappedIndexableGraph : WrappedGraph,
    IIndexableGraph, IGraph
```

VB

```
Public Class WrappedIndexableGraph
    Inherits WrappedGraph
    Implements IIndexableGraph, IGraph
```

C++

```
public ref class WrappedIndexableGraph : public WrappedGraph,
    IIndexableGraph, IGraph
```

F#

```
type WrappedIndexableGraph =
    class
        inherit WrappedGraph
        interface IIndexableGraph
        interface IGraph
    end
```

The **WrappedIndexableGraph** type exposes the following members.

Constructors

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------|----------------------------------------------------------------------|
|  | WrappedIndexableGraph | Initializes a new instance of the WrappedIndexableGraph class |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------|-------------|
|  | CreateIndex | |

| | | |
|-----------------------------------------------------------------------------------|----------------------------|--|
|  | DropIndex | |
|  | GetIndex | |
|  | GetIndices | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AddEdge | Add an edge to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | AddUniqueVertex | Add a vertex to a graph only if no other vertex in the provided Index is indexed by the property key/value pair. If a vertex already exists with that key/value pair, return the pre-existing vertex. (Defined by IndexableGraphHelpers .) |
|  | AddVertex | Add a vertex to the graph with specified id and provided properties. (Defined by GraphHelpers .) |
|  | CopyGraph | Copy the vertex/edges of one graph over to another graph. The id of the elements in the from graph are attempted to be used in the to graph. This method only works for graphs where the user can control the element ids. (Defined by GraphHelpers .) |
|  | CreateTinkerGraph | (Defined by GraphHelpers .) |
|  | GraphString | (Defined by StringFactory .) |
|  | LoadGml | (Defined by GraphHelpers .) |
|  | LoadGraphml | (Defined by GraphHelpers .) |
|  | LoadGraphson | (Defined by GraphHelpers .) |
|  | ReIndexElements(T) | For those graphs that do not support automatic reindexing of elements when a key is provided for indexing, this method can be used to simulate that behavior. The elements in the graph are iterated and their properties (for the provided keys) are removed and then added. Be sure that the key indices have been created prior to calling this method so that they can pick up the property mutations calls. Finally, if the graph is a TransactionalGraph, then a 1000 mutation buffer is used for each commit. (Defined by KeyIndexableGraphHelpers .) |
|  | SaveDotNet | (Defined by GraphHelpers .) |
|  | SaveGml | (Defined by GraphHelpers .) |
|  | SaveGraphml | (Defined by GraphHelpers .) |
|  | SaveGraphson | (Defined by GraphHelpers .) |

WrappedIndexableGraph.GetIndex Method

[Missing <summary> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedIndexableGraph.GetIndex(System.String,System.Type)"]

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IIndex GetIndex(  
    string indexName,  
    Type indexClass  
)
```

VB

```
Public Function GetIndex (  
    indexName As String,  
    indexClass As Type  
) As IIndex
```

C++

```
public:  
virtual IIndex^ GetIndex(  
    String^ indexName,  
    Type^ indexClass  
) sealed
```

F#

```
abstract GetIndex :  
    indexName : string *  
    indexClass : Type -> IIndex  
override GetIndex :  
    indexName : string *  
    indexClass : Type -> IIndex
```

Parameters

indexName

Type: [System.String](#)

[Missing <param name="indexName"/> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedIndexableGraph.GetIndex(System.String,System.Type)"]

indexClass

Type: [System.Type](#)

[Missing <param name="indexClass"/> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedIndexableGraph.GetIndex(System.String,System.Type)"]

Return Value

Type: [IIndex](#)

[Missing <returns> documentation for "M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedIndexableGraph.GetIndex(System.String,System.Type)"]

Implements

[IIndexableGraph.GetIndex\(String, Type\)](#)

See Also

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public IEnumerable<IIndex> GetIndices ()
```

VB

```
Public Function GetIndices As IEnumerable (Of IIndex)
```

C++

```
public:  
virtual IEnumerable<IIndex^>^ GetIndices () sealed
```

F#

```
abstract GetIndices : unit -> IEnumerable<IIndex>  
override GetIndices : unit -> IEnumerable<IIndex>
```

Return Value

Type: [IEnumerable\(IIndex\)](#)

[Missing <returns> documentation for

"M:VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedIndexableGraph.GetIndices"]

Implements

[IIndexableGraph.GetIndices\(\)](#)

VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped.WrappedVertex

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public class WrappedVertex : WrappedElement,
    IVertex, IElement, IDictionary<string, Object>,
    ICollection<KeyValuePair<string, Object>>,
    IEnumerable<KeyValuePair<string, Object>>,
    IEnumerable, IDictionary, ICollection
```

VB

```
Public Class WrappedVertex
    Inherits WrappedElement
    Implements IVertex, IElement, IDictionary(Of String, Object),
    ICollection(Of KeyValuePair(Of String, Object)), IEnumerable(Of
KeyValuePair(Of String, Object)),
    IEnumerable, IDictionary, ICollection
```

C++

```
public ref class WrappedVertex : public WrappedElement,
    IVertex, IElement, IDictionary<String^, Object^>,
    ICollection<KeyValuePair<String^, Object^>>,
    IEnumerable<KeyValuePair<String^, Object^>>,
    IEnumerable, IDictionary, ICollection
```

F#

```
type WrappedVertex =
    class
        inherit WrappedElement
        interface IVertex
        interface IElement
        interface IDictionary<string, Object>
        interface ICollection<KeyValuePair<string, Object>>
        interface IEnumerable<KeyValuePair<string, Object>>
        interface IEnumerable
        interface IDictionary
```

```
interface ICollection
end
```

The **WrappedVertex** type exposes the following members.

Constructors

| | Name | Description |
|-----------------------------------------------------------------------------------|-------------------------------|--------------------------------------------------------------|
|  | WrappedVertex | Initializes a new instance of the WrappedVertex class |

Properties

| | Name | Description |
|-----------------------------------------------------------------------------------|------------------------|-------------|
|  | Vertex | |

Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|-----------------------------|-------------|
|  | AddEdge | |
|  | GetEdges | |
|  | GetVertices | |
|  | Query | |

Extension Methods

| | Name | Description |
|-------------------------------------------------------------------------------------|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | AreEqual | A standard method for determining if two elements are equal. This method should be used by any <code>Element.equals()</code> implementation to ensure consistent behavior. (Defined by ElementHelpers .) |
|  | CopyProperties | Copy the properties (key and value) from one element to another. The properties are preserved on the from element. <code>ElementPropertiesRule</code> that share the same key on the to element are overwritten. (Defined by ElementHelpers .) |
|  | GetProperties | Get a clone of the properties of the provided element. In other words, a <code>HashMap</code> is created and filled with the key/values of the element's properties. (Defined by ElementHelpers .) |
|  | HaveEqualEdges | Test whether the two vertices have equal edge sets (Defined by VertexHelpers .) |
|  | HaveEqualIds | Simply tests if the element ids are equal(). (Defined by ElementHelpers .) |
|  | HaveEqualNeighborhood | Test whether the two vertices have equal properties and edge sets. (Defined by VertexHelpers .) |

| | | |
|-----------------------------------------------------------------------------------|------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | HaveEqualProperties | <p>Determines whether two elements have the same properties. To be true, both must have the same property keys and respective values must be equals(). (Defined by ElementHelpers.)</p> |
|  | SetProperties(IDictionary(String, Object)) | <p>Overloaded. Set the properties of the provided element using the provided dictionary. (Defined by ElementHelpers.)</p> |
|  | SetProperties(Object[]) | <p>Overloaded. Set the properties of the provided element using the provided key value pairs. The var args of Objects must be divisible by 2. All odd elements in the array must be a string key. (Defined by ElementHelpers.)</p> |
|  | ValidateProperty | <p>Determines whether the property key/value for the specified element can be legally set. This is typically used as a pre-condition check prior to setting a property. Throws <code>ArgumentException</code> whether the triple is legal and if not, a clear reason message is provided (Defined by ElementHelpers.)</p> |
|  | VertexString | <p>(Defined by StringFactory.)</p> |

WrappedVertex Constructor

Initializes a new instance of the [WrappedVertex](#) class

Namespace: [VelocityGraph.Frontenac.Blueprints.Util.Wrappers.Wrapped](#)

Assembly: VelocityGraph (in VelocityGraph.dll) Version: 11.1.0.0 (11.1)

Syntax

C#

```
public WrappedVertex(  
    IVertex vertex  
)
```

VB

```
Public Sub New (  
    vertex As IVertex  
)
```

C++

```
public:  
WrappedVertex(  
    IVertex^ vertex  
)
```

F#

```
new :  
    vertex : IVertex -> WrappedVertex
```

Parameters

vertex

Type: [VelocityGraph.Frontenac.Blueprints.IVertex](#)
